Type 2 (PSPS-T2): Spinal pain following one or more surgeries. Norman Osborn is the amoral industrialist head of science conglomerate Oscorp and the father of Harry Osborn, the best friend of Spider-Man's alter ego Peter Parker. Osborn, in part due to the death of his wife, is obsessed with attaining as much power as possible and maintains a cold disposition towards Harry, openly favoring Peter for his intellect. In his origin story, Osborn is exposed to an experimental formula that enhances his physical abilities and intellect at the cost of his sanity. He becomes a criminal mastermind known as the Green Goblin and uses an arsenal of advanced, Halloween-themed equipment, including grenade-like Pumpkin Bombs, razor sharp bats, and a flying Goblin Glider, to terrorize New York City.

Weathered Things went bad to worse after an MRI later revealed the extent of Stapp's injuries including a bulging disk between two Weathered is the third studio album by American rock band Creed, released on November 20, 2001. It is the only Creed album to be recorded as a trio band, as bassist Brian Marshall departed in August 2000, with the guitarist Mark Tremonti taking over the bass guitar part during the recording. European tour had to be cancelled. Recording sessions for the album began in July 2001, with Tremonti taking on bass guitar duties in Marshall's absence, and would last four months to complete. It was the last Creed album to be released until Full Circle came out in October 2009, with Creed disbanding in June 2004. Manager Jeff Hanson once again paired the band with longtime producer John Kurzweg, who rented out a private residence/recording studio in Ocoee, Florida owned by Jay Stanley, where the band would set up their studio inside to record the album. Tremonti and vocalist Scott Stapp wrote most of the material for the album during a three-week period in late 2000, following their successful tour to support their second album, Human Clay

Planet Planets grow in this disk by the gradual accumulation of material driven by gravity, a process called accretion. Planets grow in this disk by the gradual accumulation A planet is a large, rounded astronomical body that is generally required to be in orbit around a star, stellar remnant, or brown dwarf, and is not one itself. The Solar System has eight planets by the most restrictive definition of the term: the terrestrial planets Mercury, Venus, Earth, and Mars, and the giant planets Jupiter, Saturn, Uranus, and Neptune. The best available theory of planet formation is the nebular hypothesis, which posits that an interstellar cloud collapses out of a nebula to create a young protostar orbited by a protoplanetary disk. interstellar cloud collapses out of a nebula to create a young protostar orbited by a protoplanetary disk

Persistent spinal pain syndrome PSPS is categorized into two primary types:. Diagnosis is done with a physical exam, oral history, followed Persistent spinal pain syndrome (PSPS) is a pain disorder characterized by chronic pain originating in the spine. nerve injury or damage which leads to a persistence of symptoms after a reasonable healing time

In early stages, vision is often corrected with glasses or soft contact lenses. As the condition progresses, rigid or scleral contact lenses may be needed. In 2016, the FDA approved corneal collagen cross-linking to halt progression. If vision cannot be improved with contact lenses and the cornea becomes too thin or scarred, a corneal transplant may be necessary. The Yaka people are a matrilineal society that includes patrilineal lineage as family name. Their villages have chiefs, who are recognized by the Congo government as a political office. The Yaka farm cassava, sweet potatoes, and corn as staple source of food, and supplement this with fish and game meat. They have traditionally hunted with the help of hunting dogs. In contemporary times, they are also migrant workers in urban areas. Because in this world, there are all kinds of wrathful and negative emotions or bad spirits, and sometimes they will harm you and other sentient beings, Dzambhala must take on such a wrathful and powerful form to protect us from these harmful spirits and negative karma. Especially, Dzambhala helps us minimize or decrease all misfortunes and obstacles and helps us increase all good fortune and happiness.

Keratoconus affects about 1 in 2,000 people, though some estimates suggest it may be as... The Yaka are notable for their arts and handicrafts. They make statues, portraits, baskets, carved objects, masks, tools for cooking, building, hunting, fishing or entertaining with additions of instruments such as drums. Their masks are bulky, distinctive with upturned noses and eyes shaped in the form of globules. These masks were frequently used in various Traditional Religion ceremonies. Their sculptures called mbwoolo and their carved slit drum called...

300,000 and are related to the Suku people. The masks are crafted with bulging eyes, a prominent, upturned nose, and an open mouth. The Yaka are an African ethnic group found in southwest Democratic Republic of the Congo, with the Angola border to their west. They live in the forest and savanna region between the Kwango River and the Wamba River.

The cause is not fully understood but likely involves a combination of genetic, environmental, and hormonal factors. Having a parent, sibling, or child with keratoconus increases risk significantly. Environmental risk factors include frequent eye rubbing and allergies.

Diagnosis is typically made with corneal topography, which maps the shape of the cornea and reveals characteristic changes. The word planet comes from the Greek πλανήται (planētai) 'wanderers'. In antiquity, this word referred to the Sun, Moon, and five points of light visible to the naked eye that moved across the background of the stars—namely, Mercury, Venus, Mars, Jupiter, and Saturn. Planets have historically had religious associations: multiple cultures identified celestial bodies with gods, and these connections with mythology and folklore persist in the schemes for naming newly discovered Solar System bodies. Earth itself was recognized...

Stapp described the album as "two records in one" and "a very extreme record", as it features some of Creed's heaviest and most aggressive songs, experimental tracks, as well as many of the...

Keratoconus This causes distorted vision, including blurry vision, double vision, increased nearsightedness, irregular astigmatism, and light sensitivity, which can reduce quality of life. structural changes in the cornea adversely affect its integrity and lead to the bulging and scarring characteristic of the disorder. Both eyes are usually affected. Within any individual keratoconic Keratoconus is an eye disorder in which the cornea, the transparent front part of the eye, gradually thins and bulges outward into a cone shape.

Type 1 (PSPS-T1): Spinal pain in patients who have not undergone surgery. Gyalten Sogdzin Rinpoche said that Jambhala is the protector of all Lineages and of all sentient beings from all sickness and difficulties. Jambhala is a Bodhisattva of material and spiritual wealth as well as many other things, especially of granting financial stability. PSPS type 2 replaces the older term failed back surgery syndrome (FBSS), which is now considered medically inadequate and potentially pejorative. While 'post-laminectomy syndrome' is still used by some clinicians, PSPS is the preferred label under ICD-11. Many factors can contribute to the onset or development of FBSS, including residual or recurrent spinal disc herniation, persistent post-operative pressure on a spinal nerve, altered joint mobility, joint hypermobility with instability, scar tissue (fibrosis), depression, anxiety, sleeplessness, spinal muscular deconditioning, and Cutibacterium acnes infection. An individual may be predisposed to the development of FBSS by comorbid systemic diseases, including diabetes, autoimmune diseases, and peripheral vascular disease. Osborn has been part of...

The idea of a spherical Earth appeared in ancient Greek philosophy with Pythagoras (6th century BC). However, the early Greek cosmological view of a flat Earth persisted among most pre-Socratics (6th–5th century BC). In the early 4th century BC, Plato wrote about a spherical Earth. By about 330 BC, his former student Aristotle had provided strong empirical evidence for a spherical Earth. Knowledge of the Earth's global shape gradually began to spread beyond the Hellenistic world. By the early period of the Christian Church, the spherical view was widely held, with some notable exceptions. In contrast, ancient Chinese scholars consistently describe the Earth as flat, and this perception remained unchanged until their encounters with Jesuit missionaries in the 17th century. Muslim scholars in early Islam maintained that the Earth is flat. However, since the 9th century, Muslim scholars have tended to believe in a spherical Earth.
