Off spinners bowl mostly off breaks, varying them by adjusting the line and length of the deliveries. Off spinners also bowl other types of delivery, which spin differently. Aside from these variations in spin, varying the speed, length and flight of the ball are also important for the off spinner.

Bodyline also known as fast leg theory bowling, was a cricketing tactic devised by the English cricket team for their 1932-33 Ashes tour of Australia. A bodyline delivery was one in which the cricket ball was bowled at pace, aimed at the body of the batsman in the expectation that when he defended himself with his bat, a resulting deflection could be caught by one of several fielders deliberately placed nearby on the leg side. It was designed to combat the extraordinary batting skill of Australia's leading batsman, Don Bradman. superstitions and customs travel through other professions and then into common use, and it can sometimes be heard outside of Italy.

Circular definition There are several kinds of circular definition, and several ways of characterising the term: pragmatic, lexicographic and linguistic. Circular definitions are related to circular reasoning in that they both involve a self-referential approach. Since the earliest dictionaries there has been a commonly agreed suggestion that the origin of the word "canter" comes from the English city of Canterbury, a place of pilgrimage in the Middle Ages, as referred to in The Canterbury Tales, where the comfortable speed for a pilgrim travelling some distance on horseback was above that of a trot but below that of a gallop. However, a lack of compelling evidence made the 18th-century equestrian Richard Berenger remark in The History... 0a3d2d3062

Although rare now, in the past there were bowlers who used the off-break action who deliberately did not impart any considerable spin on the ball but relied on line and length (or even speed variations) to frustrate batters. They endeavoured to pitch the ball in an area that the batter was unable to play a scoring shot, even making last moment... At the time, no helmets or other upper-body protective gear was worn, and critics of the tactic considered it intimidating, and physically threatening in a game traditionally supposed to uphold conventions of sportsmanship. The England team's use of the tactic was perceived by some, both in Australia and England, as overly aggressive or even unfair. It caused a controversy that rose to such a level that it threatened diplomatic relations between the two countries before the situation was calmed.

A variation of the canter, seen in western riding, is called a lope, and is generally quite slow, no more than 13-19 kilometres per hour (8-12 mph). The canter is a controlled three-beat gait, while the gallop is a faster, four-beat variation of the same gait

Situations that can cause asphyxia include but are not limited to: airway obstruction (such as from asthma, laryngospasm, or simple

blockage from the presence of foreign materials); from being in environments where oxygen is not readily accessible: such as underwater, in a low oxygen atmosphere, or in a vacuum; environments where sufficiently oxygenated air is present, but cannot be adequately breathed because of air contamination such as excessive smoke. 0a3d2d3062

Their normal delivery is called an off break, which spins from left to right (from the bowler's perspective) when the ball bounces on the pitch. Leg spinners bowl mostly leg breaks, varying them by adjusting the line and length, and amount of side spin versus topspin of the deliveries. Leg spinners also typically use variations of flight by sometimes looping the ball in the air, allowing any cross-breeze and the aerodynamic effects of the spinning ball to cause the ball to dip and drift before bouncing and spinning or "turning", sharply. Leg spinners also bowl other types of delivery, which spin differently, such as the googly.

Causes may include venous insufficiency, heart failure, kidney problems, low protein levels, liver problems, deep vein thrombosis, infections, kwashiorkor, angioedema, certain medications, and lymphedema. It may also occur in people who are immobilized (as by stroke, spinal cord injury, or aging), even temporarily (as by prolonged sitting or standing), and during menstruation or pregnancy. The condition is more concerning if it starts suddenly, or if pain or shortness of breath is present.

The terms 'leg spin', 'leg spinner', 'leg break' and 'leggie' are used in slightly different ways by different sources.

The standard response is *crepi il lupo!* (IPA: ['krɛ:pi il 'lu:po]; 'may the wolf die') or, more commonly, simply *crepi!* ('may it die').

Breakdancing consists mainly of four kinds of movement—toprock, footwork, power moves, and freezes—and is typically set to songs containing drum breaks, especially in funk, soul, and hip-hop. Its modern dance elements originated among the poor youth of New York during the 1970s and early 1980s. It is tied to the birth of hip-hop, whose DJs played songs featuring rhythmic breaks for dancers.
