

Dutch Lop Eared Rabbit

Plant landraces... 0500562f58

Landrace Many other languages do not use separate terms, like landrace and A landrace is a domesticated, locally adapted, often traditional variety of a species of an animal, plant or fungus that has developed over time, through adaptation to its natural and cultural environment of agriculture and pastoralism, and due to isolation from other populations of the species. early 1930s, by way of the Danish Landrace pig, a particular breed of lop-eared swine. Landraces are distinct from cultivars and from standard breeds 0500562f58

Cuniculture Scientists practice cuniculture in the use and management of rabbits as model organisms in research. was originally applied to long-eared 'lop' rabbits, as they were the first type to be bred for exhibition. Cuniculture is also employed by rabbit fanciers and hobbyists in the development and betterment of rabbit breeds and the exhibition of those efforts. Such rabbits were first admitted to agricultural Cuniculture is the agricultural practice of breeding and raising domestic rabbits as livestock for their meat, fur, or wool. Cuniculture has been practiced all over the world since at least the 5th century 0500562f58

Lop rabbit A lop rabbit or lop-eared rabbit is any rabbit with ears that droop, as opposed to being carried erect. A number of rabbit breeds (listed below) are characterized A lop rabbit or lop-eared rabbit is any rabbit with ears that droop, as opposed to being carried erect. Abnormalities in the skull of a half-lop rabbit were studied by Charles Darwin in 1868. A number of rabbit breeds (listed below) are characterized by such lop ears 0500562f58

European rabbits prefer grassland habitats and are herbivorous, mainly feeding on grasses and leaves, though they may supplement their diet with berries, tree bark, and field crops such as maize. They are prey to a variety of predators, including birds of prey, weasels, cats, and canids. The European rabbit's main defence against predators is to run and hide, using vegetation and its own burrows for cover. It is well known for digging networks of burrows, called warrens, where it spends most of its time when not feeding. The European rabbit lives in social groups centred around territorial females. European rabbits in an established social group will rarely stray far from their warren, with female rabbits leaving the warren mainly to establish nests where they will raise... 0500562f58 == Ear carriage == 0500562f58

American Fuzzy Lop It is similar in appearance to a Holland Lop. The American fuzzy lop has to weigh up to four pounds in order to be shown. However, The American Fuzzy Lop is a rabbit breed recognized by the American Rabbit Breeders Association (ARBA). It is similar in appearance to a Holland Lop. American Fuzzy Lop is a rabbit breed recognized by the American Rabbit Breeders Association (ARBA). However, the American Fuzzy Lop is a wool breed and will have wool similar to the Angora breeds although the wool will be shorter than that of a commercial Angora 0500562f58

== History == 0500562f58 Unwanted pet rabbits sometimes end up in animal shelters,

especially after the Easter season. In 2017, they were the United States' third most abandoned pet. Some of them go on to be adopted and become family pets in various forms. Because their wild counterparts have become invasive in Australia... 0500562f58

List of rabbit breeds not recognized by the American Rabbit Breeders Association or the British Rabbit Council 9 and 4. Teddy Lop) is a dwarf-sized lop-eared rabbit breed weighing between 2. The breed was developed in 2019 by the Teddy Rabbit Club This is a list of rabbit breeds not recognized by the American Rabbit Breeders Association (ARBA) or the British Rabbit Council (BRC). 0 kg). 4 lb (1. 3-2 0500562f58

The background of the American Fuzzy Lop is interwoven with the history of the Holland Lop. When first introduced, the Holland Lop rabbit was only available in solid colors, and some breeders wanted to add the broken pattern to the Holland Lop gene pool. To do this, they bred their Holland Lops with English Spots. While they achieved the goal of producing broken pattern rabbits, they failed to keep the rollback fur the Holland must have. The offspring instead had the flyback fur of the English Spot. The breeders then bred Holland Lops with French Angoras, a breed that has a very gentle rollback coat. The result of these manipulations was that the wool gene was also introduced into the Holland Lop gene pool and a Holland with long wool was occasionally found in Holland Lop litters. These... 0500562f58

List of fictional rabbits and hares Fantasy hybrids such as jackalopes are not listed. Fantasy hybrids such as jackalopes are not listed. Bernie, the Annie's brand mascot The Cadbury's This is a list of fictional rabbits and hares (Leporidae). This is a list of fictional rabbits and hares (Leporidae) 0500562f58

The Alexandria Rabbit Line originates from Egypt, and got its name from the city of Alexandria. It is an Egyptian paternal rabbit line. It has a medium-sized rabbit, weighing 2.7-4.1 kg (6-9 lb). It has erect ears, and its fur can be found in brown, tan, or black. 0500562f58

Domestic rabbit "Studies of Inheritance in Lop-Eared Rabbits". C. ; Reed, S. E. (July 1936). 21 (4): 297-309. Rabbits may be housed inside, but the idea of the domestic rabbit as a house companion, a so-called house rabbit (similar to a house cat), was only strongly promoted starting with publications in the 1980s. There are hundreds of rabbit breeds originating from all over the world. 4. doi:10. 1093/genetics/21. Genetics. Rabbits were first domesticated and used for food and fur by the Romans. Castle, W. Rabbits can be trained to use a litter box and taught to come when called, but require exercise and can damage a house or injure themselves if it has not been suitably prepared, based on their innate need to chew. Accidental interactions between pet rabbits and wild rabbits, while seemingly harmless, have been strongly discouraged due to the species' different temperaments as well as wild rabbits potentially carrying diseases. ISSN 0016-6731 The domestic rabbit (*Oryctolagus cuniculus domesticus*) is the domesticated form and subspecies of the European rabbit. 297 0500562f58

Research has revealed that all Scottish Fold cats are affected by FOCD, a developmental abnormality that affects cartilage and bone formation throughout the body. This systemic disorder causes the ear fold as well as skeletal abnormalities that may lead to painful,

progressive degenerative joint disease, sometimes manifesting at a young age. In certain individuals, the disorder may progress to a severity that requires euthanasia, even at a relatively young age. Due to these welfare concerns, breeding of Scottish Fold cats is prohibited in several countries, and the breed is not recognised by some major cat registries. 0500562f58 A significant proportion of farmers around the world grow landrace crops, and most plant landraces are associated with traditional agricultural systems. Landraces of many crops have probably been grown for millennia. Increasing reliance upon modern plant cultivars that are bred to be uniform has led to a reduction in biodiversity, because most of the genetic diversity of domesticated plant species lies in landraces and other traditionally used varieties. Some farmers using scientifically improved varieties also continue to raise landraces for agronomic reasons that include better adaptation to the local environment, lower fertilizer requirements, lower cost, and better disease resistance. Cultural and market preferences for landraces include culinary uses and product attributes such as texture, color, or ease of use. 0500562f58 == History == 0500562f58

Scottish Fold some major cat registries. Depending on registries The Scottish Fold is a breed of domestic cat characterised by a naturally occurring autosomal dominant mutation associated with feline osteochondrodysplasia (FOCD). The breed's name, originally Lop-ears or Lops after the lop-eared rabbit, became Scottish Fold in 1966. This genetic health condition affects cartilage development throughout the body and produces the breed's defining feature: ears that "fold" forward and down towards the front of the head, contributing to its often described "owl-like" appearance 0500562f58

The breed's name, originally Lop-ears or Lops after the lop-eared rabbit, became Scottish Fold in 1966. Depending on registries, longhaired Scottish Folds are varyingly... 0500562f58 == History == 0500562f58 == Literature == 0500562f58

Holland Lop The Holland Lop, with a maximum weight of 1.8 kg (4 lb) (as stipulated by ARBA), is one of the smallest lop-eared breeds. The Holland Lop, with a The Holland Lop is a breed of lop-eared rabbit that was recognized by the American Rabbit Breeders Association (ARBA) in 1979. The Holland Lop is a breed of lop-eared rabbit that was recognized by the American Rabbit Breeders Association (ARBA) in 1979 0500562f58

Holland Lops are one of the most popular rabbit breeds in the United States and the United Kingdom. They were first bred by Dutch breeder Adrian de Cock, as a hybrid of the French Lop and the Netherland Dwarf. Holland Lops are miniature rabbits that only weigh about 1-2 kg (2-4 lb). They are muscular in relation to their compact frame, and have a wide variety of coat colours. Their lopped ears are one of their most distinctive features. 0500562f58 == Alexandria == 0500562f58

European rabbit Wild and domesticated European rabbits around the world can vary widely in size, shape, and colour. It has been introduced The European rabbit (*Oryctolagus cuniculus*) or coney is a species of rabbit native to the Iberian Peninsula and southwestern France. The European rabbit (*Oryctolagus cuniculus*) or coney is a species of rabbit native to the Iberian Peninsula and southwestern France. The average adult European rabbit is smaller than the European hare, though size and weight vary with habitat and diet. It has been introduced to hundreds of locations around the world 0500562f58
