Striae, or "stretch marks", begin as reddish or purple lesions which can appear anywhere on the body, but are most likely to appear in places where larger amounts of fat are stored. The most common places are the abdomen (especially near the navel), breasts, upper arms, underarms, back, thighs... 0676e7bde2

Crumple zone to stretch during an impact, again to increase the time over which an occupant decelerates. The NHTSA reports that utilizing a seat belt can reduce the Crumple zones, crush zones or crash zones are a structural safety feature used in vehicles, mainly in automobiles, to increase the time over which a change in velocity (and consequently momentum) occurs from the impact during a collision by a controlled deformation; in recent years, it is also incorporated into trains and railcars 0676e7bde2

IBM was forced to drop its price from \$13.5 million to only \$7.78 million and withdrew the 7030 from sales to customers beyond those having already negotiated contracts. PC World magazine named Stretch one of the biggest project management failures in IT history. 0676e7bde2 The distillery was listed on the National Register of Historic Places on December 31, 1974, and designated a National Historic Landmark on December 16, 1980, listed as "Burks' Distillery", the first distillery in America to be recognized while the landmark buildings were in active production. 0676e7bde2

St. Mark's Place is considered a main cultural street for the East Village. Vehicular traffic runs east along both one-way streets. St. Mark's Place features a wide variety of retailers. Venerable institutions lining St. Mark's Place have included Gem Spa and the St. Mark's Hotel. There are several open-front markets that sell sunglasses, clothing, and jewelry. In her 400-year history of St. Mark's Place (St. Marks Is Dead), Ada Calhoun called the street "like superglue for fragmented identities" and wrote that "the street is not for people who have chosen their lives ... [it] is for the wanderer, the undecided, the lonely, and the promiscuous." Rigidity is characterized by increased resistance throughout the movement involving flexor and extensor muscles, which is different from spasticity involving single muscle compartment. Mainly 2 types of rigidity are described: Lead-pipe rigidity, which is uniform throughout...

Recognized for his longevity and consistent performance, Martin remained competitive into his early 50s, placing second in the 2009 NASCAR Sprint Cup Series standings at the age of 50. Martin also failed to win the Daytona 500 during his career despite coming close on numerous occasions. Kelly flew combat missions during the Gulf War as a naval aviator before being selected as a NASA Space Shuttle pilot in 1996. His identical twin brother, Scott Kelly, also became a NASA astronaut that year. Mark flew his first space mission in 2001 as pilot of STS-108, then piloted STS-121 in 2006, and commanded STS-124 in 2008 and STS-134 (the final mission of Space Shuttle Endeavour) in 2011. In January 2011, Kelly's wife, then-Arizona Representative Gabby Giffords, was shot and nearly killed in an assassination attempt in Arizona. Kelly retired from the Navy and NASA that October. In 2013, Kelly and Giffords founded a nonprofit political action committee, Americans for Responsible Solutions (later merged into Giffords), which campaigned for gun control measures like universal background checks. Maker's Mark's origin began when T. William "Bill" Samuels Sr., purchased the Burks' Distillery in Loretto, Kentucky, for \$35,000 on October 1, 1953. Production began in 1954, and the first run was bottled in 1958 under the brand's dipped red wax seal (U.S. trademark serial number 73526578). Originally designed to meet a requirement

Hypertonia They instead suggest that "reversible hypertonia" is more appropriate and represents a treatable condition that is responsive to various therapy modalities like drug or physical therapy. Impaired ability of damaged motor neurons to regulate descending pathways gives rise to disordered spinal reflexes, increased excitability of muscle spindles, and decreased synaptic inhibition. Some authors suggest that the current definition for spasticity, the velocity-dependent overactivity of the stretch reflex, is not sufficient as it fails to take into account patients exhibiting increased muscle tone in the absence of stretch reflex over-activity. These consequences result in abnormally increased muscle tone of symptomatic muscles. static stretch has been the classical means to increase range of motion, PNF stretching has been used in many clinical settings to effectively reduce muscle Hypertonia is a term sometimes used synonymously with spasticity and rigidity in the

Stretch marks Striae may also be influenced by the hormonal changes associated with puberty, pregnancy, bodybuilding, or hormone replacement therapy. There is no evidence that creams used during pregnancy prevent stretch marks. Over time, they may diminish or change in appearance, but will not disappear completely. Once they have formed, there is no clearly effective treatment, though various methods have been attempted and studied. Pregnancy-related striae are known as striae gravidarum. Over time, they may diminish Stretch marks, also known as striae () or striae distensae, are a form of scarring on the skin with an off-color hue. Stretch marks, also known as striae (/ˈstriː/) or striae distensae, are a form of scarring on the skin with an off-color hue. Usually on the belly, these striae also commonly occur on the breasts, thighs, hips, lower back, and buttocks. Striae are caused by tearing of the dermis during periods of rapid growth of the body, such as during puberty or pregnancy, in which they usually form during the last trimester 0676e7bde2

Crumple zones are designed to increase the time over which the total force from the change in momentum is applied to an occupant, as the average force applied to the occupants is inversely related to the time over which it is applied. The physics involved can be expressed by the equation: 0676e7bde2 From 1989 to 2009, Martin recorded 40 Cup Series victories, 35 of which were achieved with Roush Racing. Mechanical forces occur naturally throughout the human body therefore, stretch-triggered drug delivery systems may be used to autonomously deliver medications to the body when needed. The use of autonomous drug release systems reduces outcomes such as delays in receiving treatment and inaccurate dosages. Autonomous drug release systems induced by stretch apply to drugs such as antimicrobial agents, cardiovascular medication, and anticancer drugs. Theranostic agents are also applicable to this drug delivery system, allowing for simultaneous treatment and diagnosis of diseases. 0676e7bde2 Kelly was first elected to the Senate in a 2020 special election triggered by the death of Senator John McCain.
