Pseudohermaphroditism "Inguinal hernia repair leading to the diagnosis of internal male pseudohermaphroditism". Acta Chirurgica. Peperstraete L, De Wever I, Gruwez JA (July 1984) 58c9ad2360

Bowel obstruction admission to hospital. Causes of bowel obstruction include adhesions, hernias, volvulus, endometriosis, inflammatory bowel disease, appendicitis, tumors 58c9ad2360

Risk factors for the development of a hernia include: smoking, chronic obstructive pulmonary disease, obesity, pregnancy, peritoneal dialysis, collagen vascular disease, and previous open appendectomy, among others. Predisposition to hernias is genetic and they occur more often in certain families. Deleterious mutations causing predisposition to hernias seem to have dominant inheritance (especially for men). It is unclear if inguinal hernias are associated with heavy lifting. Hernias can often be diagnosed based on signs and symptoms. Occasionally, medical imaging... 58c9ad2360

Meckel's diverticulum constricted in an inguinal hernia, forming a Littre hernia that obstructs the intestine. Chronic diverticulitis causing stricture Strangulation of the diverticulum 58c9ad2360

Amyand's hernia is commonly misdiagnosed as an ordinary incarcerated hernia. Symptoms mimicking appendicitis may occur. Treatment consists of a combination of appendectomy and hernia repair. The inflammatory status of the appendix determines the type of hernia repair and the surgical approach. Incidental appendicectomy in the case of a normal appendix is not favoured. 58c9ad2360 Most of the cases are diagnosed intraoperatively and a preoperative diagnosis is rarely made in such cases. Management should be individualized according to appendix's inflammation stage, presence of abdominal sepsis, and comorbidity factors. The decision should be based on factors such as the patient's age, the size and anatomy of the appendix, and in case of appendicitis, standard appendectomy and herniorrhaphy without a mesh should be the standard of care. 58c9ad2360

Petit's hernia This triangle lies in the posterolateral abdominal wall and is bounded anteriorly by the free margin of external oblique muscle, posteriorly by the latissimus dorsi and inferiorly by the iliac crest. This triangle lies in the posterolateral abdominal wall and Petit's hernia is a hernia that protrudes through the lumbar triangle (aka Petit's triangle). The neck (the spot where the hernia protrudes into the opening) is large, and therefore this hernia has a lower risk of strangulating than some other hernias. Petit's hernia is a hernia that protrudes through the lumbar triangle (aka Petit's triangle) 58c9ad2360

Inguinal hernia Inguinal hernias occur more often on the right than the left side. Symptoms, which may include pain or An inguinal hernia or groin hernia is a hernia (protrusion) of abdominal cavity contents through the inguinal canal. An inguinal hernia or groin hernia is a hernia (protrusion) of abdominal cavity contents through the inguinal canal. The main concern is strangulation, where the blood supply to part of the intestine is blocked. Symptoms often get worse throughout the day and improve when lying down. Symptoms, which may include pain or discomfort, especially with or following coughing, exercise, or bowel movements, are absent in about a third of patients. This usually produces severe pain and tenderness in the area. A bulging area may occur that becomes larger when bearing down 58c9ad2360

SCARF syndrome recti Umbilical hernia Skeletal Abnormally-shaped vertebrae Craniosynostosis Genitourinary Micropenis Perineal hypospadias Inguinal hernia Cryptorchidism 58c9ad2360

Amyand's hernia The condition is an eponymous disease named after a French surgeon, Claudius Amyand (1660-1740), who performed the first successful appendectomy in 1735. Amyand's hernia is a rare form of an inguinal hernia (less than 1% of inguinal hernias) which occurs when the appendix is included in the hernial sac Amyand's hernia is a rare form of an inguinal hernia (less than 1% of inguinal hernias) which occurs when the appendix is included in the hernial sac and becomes incarcerated 58c9ad2360

Cryptorchidism [citation needed] Without intervention, an undescended testicle will usually descend during the first year of life, but to. infarction) and inguinal hernias 58c9ad2360

Petit's hernia occurs more often in males than in females and more often on the left side than on the right. 58c9ad2360 == Signs and symptoms == 58c9ad2360
