Combined oral contraceptive pill (COCP), often referred to as the birth control pill or colloquially as "the pill", is a type of birth control that is designed to be taken orally by

Contraceptive patch They have been shown to be as effective as the combined oral contraceptive pill with perfect use, and the patch may be more effective in typical use. citation needed] The patch is a simple and convenient form of birth control that requires weekly attention. When a woman stops using the patch, her ability to A contraceptive patch, also known as "the patch", is a transdermal patch applied to the skin that releases synthetic oestrogen and progestogen hormones to prevent pregnancy

An estrogen patch is applied directly to the skin, preferably near the lower abdomen, hips, or buttocks, and is usually changed once or twice per week. For women who have not undergone a hysterectomy, it is often suggested that they take progestogen in addition to an estrogen patch in order to protect the endometrium of the uterus. Transdermal estrogens are not recommended for all women; there are important precautions and side effects that should be considered before use.

Long-acting reversible contraceptives can be up to 31% cheaper than using non-LARC methods such as birth control pills, patch, ring, or injectables. Regardless, the initial out of pocket cost

The patch is a simple and convenient form of birth control that requires weekly attention. When a woman stops using the patch,... The doll brand set every toy industry sales record for three years running, was one of the most popular lines of children's licensed products in the 1980s, and has become one of the longest-running doll franchises in the United States. Additional Cabbage Patch products include children's apparel, bedding, infants' wear, record albums, and board games. == Production history ==

Estrogen patch Estrogen patches are commonly An estrogen patch, or oestrogen patch, is a transdermal delivery system for estrogens such as estradiol and ethinylestradiol which can be used in menopausal hormone therapy, feminizing hormone therapy for transgender women, hormonal birth control, and other uses. Transdermal preparations of estrogen are metabolized differently than oral preparations. Contraceptive patches such as norelgestromin/ethinylestradiol are a form of estrogen patch which are used for hormonal birth control. Transdermal estrogens avoid the first pass through the liver and thus potentially reduce the risk of blood clotting and stroke
