Improved to Good Article status in April

2025, the article has since been considerably improved, with the addition of more news sources, journals, and books (both English and German ones). The article was peer reviewed by several editors in late 2025 and early 2026. I appreciate the work that @Whonting: has put in to the article by helping me rewrite the article and improve the clunky prose the article previously had. This is my shortest FAC yet (tied with Smash Hit), though I think it's complete. 0256c6d2c7 Elephants and such 0256c6d2c7 In 2007, it was reported that Hotel Sacher made approximately 360,000 Sachertorte a year. It sells its cakes worldwide. I must presume "it" in the second paragraph refers to Hotel Sacher? Might combine to In 2007, it was reported that Hotel Sacher made approximately 360,000 Sachertorte a year and sells them worldwide. 0256c6d2c7 Homework Questions 0256c6d2c7 Donna Nook 0256c6d2c7 "the memory of the nonagenarian inventor or the promotional efforts of his hotelier son" Might clarify a little in-line who is who (e.g. "the memory of the nonagenarian inventor [Sacher] or the promotional efforts of his hotelier son [Eduard]" 0256c6d2c7

List of Viz comic strips During a "convention" strip where multiple characters met each other The following is a list of recurring or notable one-off strips from the British adult spoof comic magazine Viz. Sachertorte[edit]

== Surface charge on a conductor ==

I'll come at this as a general reader with no background in Austrian confectionery or the German sources, so treat the below as queries rather than anything authoritative. Enjoyable read, and the geographic-reputation framing is a nice touch. Mostly small things.

Acker Bilk – See Jimmy Hill.

Wikipedia:Reference desk/Archives/Science/2007 May 31 Bearing down to defecate can stimulate the vagus = May 31 =. the hospital. The other relatively common morbidity associated with bowel movements is vasovagal syncope

Metalicat[edit] 0256c6d2c7 So if there is a net charge in a solid spherical conductor let's say, we know that the charge will flow to the surface and arrange themselves to minimize its electrostatic energy (as far apart from each other as possible). But what happens to its one and two dimensional analogs? For a very super thin circular conducting disk, would the charge all go to the perimeter (the circumference)? And for a very thin needle, does the charge go to the ends? If not then what happens? 67.40.134.8 (talk) 02:23, 19 September 2011 (UTC) 0256c6d2c7 Some of you might look and see that the Hungarian version is a FA, though there's several problems with it. It heavily relies on low-quality sources that might not even be reliable and there's unsourced content, therefore it would not meet our FA standards. Our version heavily relies on books and reliable news outlets, both English, German, and other. Hopefully you'll enjoy it reading it and maybe I'll make you a bit hungry. :p Vacant0 (talk • contribs) 13:33, 3 June 2026 (UTC)reply 0256c6d2c7
