When the blood contains inadequate or defective A1AT (as in alpha-1 antitrypsin deficiency), neutrophil elastase can excessively break down elastin, leading to the loss of elasticity in the lungs. This results in respiratory issues, such as chronic obstructive pulmonary disease, in adults. Normally, A1AT is produced in the liver and enters the systemic circulation. However, defective A1AT may accumulate in the liver,

potentially causing cirrhosis in both adults and children. 0eddab70f8 Compilation last updated on 31 August 2026. The results are based on the database dump of 1 August 2026, using this configuration, with these exclusions. 0eddab70f8

Wikipedia:Featured article candidates/Pneumothorax/archive1 This source (from Curr Opin Pulm Med) also discusses α 1-antitrypsin deficiency and homocystinuria as well. actually better for the purposes of this article 0eddab70f8

A1AT not only binds to neutrophil elastase from inflammatory cells but also to elastase on the cell surface. In this latter role, elastase acts as a signaling molecule for cell movement, rather than as an enzyme. Besides liver cells, A1PI is also produced in bone marrow, lymphoid... 0eddab70f8

Alpha-1 antitrypsin 15326/jcopdf. PMC 7857706. It is encoded in humans by the SERPINA1 gene. Chronic Obstr Pulm Dis. PMID 32726075 Alpha-1 antitrypsin or α 1-antitrypsin (A1AT, α 1AT, A1A, or AAT) is a protein belonging to the serpin superfamily. A protease inhibitor, it is also known as alpha1-proteinase inhibitor (A1PI) or alpha1-antiproteinase (A1AP) because it inhibits various proteases (not just trypsin). 2019. As a type of enzyme inhibitor, it protects tissues from enzymes of inflammatory cells, especially neutrophil elastase. 3. doi:10. Aerosolized Alpha-1 Antitrypsin as a Therapeutic Option". 7. 0179. 7 (3): 272-9 0eddab70f8
