

Maximum Life Of Tortoise

Tortoises of the genus *Gopherus* are so named because of some species' habit of digging large, deep burrows like those of gophers. The specific name, *polyphemus*, refers to the cave-dwelling giant, Polyphemus, of Greek mythology. e656fd9902
The gopher tortoise is placed in the genus *Gopherus*, which contains the only tortoises native to North America. The gopher tortoise is the state reptile of Georgia and the state tortoise of Florida. e656fd9902

Trigun from the lead singer as his image for the priest. Shōnen Gahosha republished the Trigun chapters in two volumes and collected the Trigun Maximum chapters in fourteen volumes. It was first serialized in Tokuma Shoten's shōnen manga magazine Monthly Shōnen Captain from March 1995 to December 1996, at which time the magazine ceased publication. He is also modeled on Tortoise Matsumoto from the band Ulfu. Its chapters were collected in three tankōbon volumes. In order to create "warm" environments Trigun (Japanese: トリガン, Hepburn: Toraigan) is a Japanese manga series written and illustrated by Yasuhiro Nightow. The series continued its publication in Shōnen Gahosha's seinen manga magazine Young King OURs, under the title Trigun Maximum (トリガンマキシマム, Toraigan Makishimamu), from October 1997 to March 2007. Set on the fictional planet known as No Man's Land, the plot follows Vash the Stampede, a famous gunman constantly fighting bounty hunters seeking the immense bounty on his head. Trigun originated from Nightow's fascination with Western movies with Vash standing out due to his pacifist nature e656fd9902

The first description of the subspecies was published in 1907 by John Van Denburgh, who used the name *Testudo hoodensis* for it. Española Island used to be called Hood Island, and that was the name which Van Denburgh knew the island by when he gave the subspecies the name *hoodensis*. The holotype, a female, was caught by Joseph R. Slevin and E.S. King in June 1906 and brought back with them to San Francisco, where it was entered into the collection of the California Academy of Sciences and allowed to live in Golden Gate Park. The species has subsequently been moved between different genera and between being considered as a species in its own right or as a subspecies of *Chelonoidis niger*. e656fd9902 == Definition == e656fd9902

Galápagos tortoise The species comprises 15 subspecies (12 extant and 3 extinct). It is the largest living species of tortoise, and can weigh up to 417 kg (919 lb). The Galápagos tortoise (*Chelonoidis niger*), also called the Galápagos giant tortoise, is a very large species of tortoise in the genus *Chelonoidis* (which The Galápagos tortoise (*Chelonoidis niger*), also called the

Galápagos giant tortoise, is a very large species of tortoise in the genus *Chelonoidis* (which also contains three smaller species from mainland South America). They are also the largest extant terrestrial cold-blooded animals (ectotherms)

e656fd9902

Galápagos tortoises are native to seven of the Galápagos Islands. Shell size and shape vary between subspecies and populations. On islands with humid highlands and abundant low vegetation, the tortoises are larger, with domed shells and short necks; on islands with dry lowlands and less ground-level vegetation, the tortoises are smaller, with "saddleback" shells and long necks. Charles Darwin's observations...

Life expectancy Although maximum life expectancy Human life expectancy is a statistical measure of the estimate of the average remaining years of life at a given age. This can be defined in two ways. Period LEB is the mean length of life of a hypothetical cohort assumed to be exposed, from birth through death, to the mortality rates observed at a given year. National LEB figures reported by national agencies and international organizations for human populations are estimates of period LEB. The most commonly used measure is life expectancy at birth (LEB, or in demographic notation e_0 , where e_x denotes the average life remaining at age x). the "maximum life span", which is the upper boundary of life, the maximum number of years any human is known to have lived. Cohort LEB is the mean length of life of a birth cohort (in this case, all individuals born in a given year) and can be computed only for cohorts born so long ago that all their members have died

e656fd9902

Most living species have an upper limit on the number of times somatic cells not expressing telomerase can divide. This is called the Hayflick limit, although this number of cell divisions does not strictly control lifespan. e656fd9902 Maximum life span contrasts with mean life span (average life span, life expectancy), and longevity. Mean life span varies with susceptibility to disease, accident, suicide and homicide, whereas... e656fd9902 == Plot == e656fd9902 == Etymology == e656fd9902 Trigun was adapted into a 26-episode anime television series by Madhouse that aired on TV Tokyo from April to October 1998. An anime feature film, Trigun: Badlands Rumble, premiered in Japan in April 2010. Orange created a reboot titled Trigun...

e656fd9902

Maximum life span The term can also denote an estimate of the maximum amount of time that a member of a given species could survive between birth and death, provided circumstances that are optimal to that member's longevity. Maximum life span (or, for humans, maximum reported age at death) is a measure of the maximum amount of time one or more members of a population have Maximum life span (or, for humans, maximum reported age at death) is a measure of the maximum amount of time one or more members of a population have been observed to survive between birth and death e656fd9902

"Maximum Boy" is Max Silver, an 11-year-old boy who lives on the north side of Chicago beside Lake Michigan, with his mom, dad, and teenage sister Tiffany. He has braces, eyeglasses, and superpowers: he can lift freight trains, fly faster than a space shuttle, and burp the alphabet. He has an adult friend named Porter Torrington, who is "Tortoise Man" and has a superpower called the Tortoise Ray. e656fd9902 The saltwater crocodile is considered to be the largest extant reptile, verified at up to 6.32 m (20.7 ft) in length and around 1,000–1,500 kg (2,200–3,300 lb) in mass. Larger specimens have been reported albeit not fully verified, the maximum of which is purportedly 7 m (23 ft) long with an estimated mass of 2,000 kg (4,400 lb). e656fd9902 The following table below lists the 15 largest extant reptile species ranked according to their average mass range, with maximum reported/reliable/estimated mass also being provided. e656fd9902 Max has a few weaknesses. Milk products and sweet potatoes give him a badly upset stomach. Ragweed makes him sneeze his head off. Seeing and hearing mathematics makes him weak and dizzy. e656fd9902 The tortoise species received its name due to the shape and style of the scutes of the carapace. The scutes are concaved or "impressed", which appear similar to stamps. e656fd9902 The species has a golden brown to dark brown shells. Their skin is usually a paler yellow and may have pinkish noses. Adults are much smaller than their relatives the Asian forest tortoise (*Manouria emys*), with a maximum carapace length of 35 cm (14 in). e656fd9902

Maximum Boy The first volume was The Hijacking of Manhattan (that is, full title Maximum Boy, starring in the Hijacking of Manhattan). and as How I Became a Superhero. disguised himself as Maximum Boy; an old friend of Tortoise Man. It was also issued as simply Hijacked. Warren Blatt - Maximum Boy is a series of eight chapter books for young readers written by the humorist Dan Greenburg, illustrated by Greg Swearingen, and published by Scholastic from 2001 to 2003. Wolfgang Ethelred's servant. Alternatively, Maximum Boy is the main character of the series, a boy superhero, and the full title of each volume begins "Maximum Boy, starring in". Silvia/Tortoise Woman - Tortoise Man's wife e656fd9902

Dan Greenburg grew up in Chicago like Max and partly based the fictional character on... e656fd9902 In animal studies, maximum span is often taken to be the mean life span of the most long-lived 10% of a given cohort. By another definition, however, maximum life span corresponds to the age at which the oldest known member of a species or experimental group has died. Calculation of the maximum life span in the latter sense depends upon the initial sample size. e656fd9902

List of largest reptiles It is worth mentioning that, unlike the upper weight of mammals, birds or fish, mass in reptiles is frequently poorly documented, thus subject to conjecture and estimation. tortoise has a maximum recorded weight of 363 kg (800 lb). The African spurred tortoise (*Centrochelys sulcata*) is the third-largest extant tortoise (and This list of largest reptiles takes into consideration both body length and mass of large reptile species, including average ranges and maximum records.

The crocodilians reach a length of 4 m (13 ft) and a mass of 500 kg (1,100 lb) or more e656fd9902

Impressed tortoise relatives the Asian forest tortoise (*Manouria emys*), with a maximum carapace length of 35 cm (14 in). It occurs in mountainous forest areas in Southeast Asia, mainly in Myanmar Burma, southern China, Thailand, Laos, Vietnam, Cambodia, Malaysia and Northeast India. The impressed tortoise lives at high elevations, The impressed tortoise (*Manouria impressa*) is a species of tortoise e656fd9902

Maximum Ride The series was inspired by Patterson's earlier novels *When the Wind Blows* and *The Lake House*, which were intended for older readers. The series centers on the adventures of Maximum "Max" Ride and her family, called the Flock, who are winged human-avian hybrids created at a lab called The School. Maximum Ride is a series of young adult science fantasy novels by American author James Patterson. The series centers on the adventures of Maximum "Max" Maximum Ride is a series of young adult science fantasy novels by American author James Patterson e656fd9902

Human remains from the early Bronze Age indicate an LEB of 24. In 2019, world LEB was 73.3. A combination of high infant mortality and deaths in young adulthood from accidents, epidemics, plagues, wars, and childbirth, before modern medicine was widely available, significantly lowers LEB. For example, a society with a LEB of 40 would have relatively few people dying at exactly 40: most will die before 30... e656fd9902 With lifespans in the wild of over 100 years, it is one of the longest-lived vertebrates. Captive Galapagos tortoises can live up to 177 years. For example, a captive individual, Harriet, lived for at least 175 years. Spanish explorers, who discovered the islands in the 16th century, named them after the Spanish galápagos, meaning "tortoise". e656fd9902

Gopher tortoise The species is native to the Southeastern United States The gopher tortoise (*Gopherus polyphemus*) is a species of tortoise in the family Testudinidae. *G. polyphemus* is threatened by predation and habitat destruction. The species is native to the Southeastern United States. The gopher tortoise is seen as a keystone species because it digs burrows that provide shelter for at least 360 other animal species. The gopher tortoise (*Gopherus polyphemus*) is a species of tortoise in the family Testudinidae. The IUCN Red List of Threatened Species lists the gopher tortoise as "vulnerable", primarily because

of habitat fragmentation and loss, and human exploitation; the animals are considered threatened in some states, while they are endangered in others e656fd9902
