

Why Do We Get Brain Freeze

The output of sense organs is first received by the thalamus. Part of the thalamus' stimuli goes directly to the amygdala or "emotional/irrational brain", while other parts are sent to the neocortex or "thinking/rational brain". If the amygdala perceives a match to the stimulus, i.e., if the... adcc32df79

== Life == adcc32df79 The brain consists of two hemispheres, each containing an amygdala—a small, almond-shaped structure located anterior to the hippocampus, near the temporal lobe. The amygdalae play a crucial role in detecting and learning which aspects of our environment are emotionally significant. They are essential for generating emotions, particularly negative emotions such as fear. Amygdala activation often happens when people see a potential threat. This activation helps individuals make decisions based on past related memories. adcc32df79

My Teacher Is an Alien freezes Duncan's body and uses his brain as a means of communication among other aliens in the galaxy who are trying to decide what they want to do with adcc32df79
