

Pt Test Full Form

PT boat particular, PT-36, PT-37, PT-39, PT-44, PT-46, PT-48, PT-59, PT-109, PT-115, and PT-123). Other PT boats gaining fame during the war were PT-363 and PT-489, A PT boat (short for patrol torpedo boat) is a motor torpedo boat used by the United States Navy in World War II. In the US Navy they were organized in Motor Torpedo Boat Squadrons (MTBRONs). These vessels were small, fast, and inexpensive to build, and were valued for their maneuverability and speed. However, PT boats were hampered at the beginning of the war by ineffective torpedoes, limited armament, and comparatively fragile construction that limited some of the variants to coastal waters b4d62b6d4a

Patrol torpedo boat PT-658 PT-658 is a prime example Motor torpedo boat PT-658 is a PT-625-class Higgins 78-foot (24 m) PT boat, built for the United States Navy during World War II. PT-658 was listed on the National Register of Historic Places on 4 September 2012. Motor torpedo boat PT-658 is a PT-625-class Higgins 78-foot (24 m) PT boat, built for the United States Navy during World War II. Of three PT boats listed on the National Register, she is one of 2 maintained in operating condition. PT-658 was in the last group of four boats delivered from the 36-boat contract NObs-1680, October 1944 for PT-625 to PT-660. PT-658 is a prime example of US Navy motor torpedo boat development during World War II. Delivered and accepted on 31 July 1945, she was fitted with all of the latest armaments and design modifications as a result of lessons learned from previous contracts and battlefield experience. In this way, PT-658 is a showcase of the final form that motor torpedo boats would take by the end of World War II b4d62b6d4a

Unlike many other T-72 upgrades, Polish Army PT-91s feature elements created almost exclusively by domestic companies, including the new engine, fire control system, and all communication system elements. Many of the elements were used to upgrade existing fleets of T-72 tanks in countries including the Czech Republic (T-72M4 CZ), Georgia (T-72SIM-1), and India (T-72 Ajeya Mk. 2). A total of 232 PT-91 tanks were delivered to the Polish Land Forces: 92 newly built vehicles and 140 from refurbished T-72M and T-72M1 tanks, designated PT-91MA and PT-91MA1, respectively. b4d62b6d4a

Lüscher color test The simplest form of the test instructs a subject to order a series of 8 colors in order of preference. English in 1969. This test claims that the order of preference can reveal characteristics of the subject's personality, but many modern

psychologists consider it to be an example of the Barnum effect, where vague statements are assumed to be more meaningful than they actually are. This test claims that the order of The Lüscher color test is a psychological test invented by Max Lüscher in Basel, Switzerland, first published in 1947 in German and first translated to English in 1969. The simplest form of the test instructs a subject to order a series of 8 colors in order of preference. The simplicity of the test has allowed it to be heavily tested b4d62b6d4a

DiPT for DiPT of 15 to 150 mg or more orally has also been reported, with a typical dose estimate of about 50 mg. It is unusual among psychedelics in that at usual doses it primarily or exclusively produces strong auditory changes, including decreased pitch, harmonic distortion, and sound unfamiliarity, but produces no other hallucinogenic effects such as visuals. However, the drug may produce more classically psychedelic effects at very high doses. According to Shulgin, testing of DiPT started Diisopropyltryptamine (DiPT), also known as N,N-diisopropyltryptamine, is a psychedelic drug of the tryptamine family related to dimethyltryptamine (DMT). It is taken orally, but can also be smoked b4d62b6d4a

Personality test , subjective) self-report questionnaire (Q-data, in terms of LOTS data) measures or reports from life records (L-data) such as rating scales. A major problem with both L-data and Q-data methods is that because of item transparency, rating scales, and self-report questionnaires are highly susceptible to motivational and response distortion ranging from lack of adequate self-insight (or biased perceptions of others) to downright dissimulation (faking good/faking bad) depending on the reason/motivation for the assessment being undertaken. Most personality assessment instruments (despite being loosely referred to as "personality tests") are in fact introspective (i. e. A personality test is a method of assessing human personality constructs. Attempts to construct actual performance tests of personality have been very limited even though Raymond Cattell with his colleague Frank Warburton compiled a list of over 2000 separate objective tests that could be used in constructing objective personality tests. Most personality assessment instruments (despite being loosely referred to as A personality test is a method of assessing human personality constructs. One exception, however, was the Objective-Analytic Test Battery, a performance test designed to quantitatively measure 10 factor-analytically discerned personality trait dimensions b4d62b6d4a

In the late 1980s, the Polish Army modernized... b4d62b6d4a The drug acts as a serotonin receptor agonist, including of the serotonin 5-HT_{2A}, 5-HT_{2B}, and 5-HT_{2C} receptors. It has weak activity at the serotonin 5-HT_{1A} receptor. DiPT does not appear to bind to the serotonin 5-HT₆ receptor or to several other serotonin receptors. It produces psychedelic-like effects in animals, which appear to be mediated primarily by serotonin 5-HT_{2A} receptor activation. The mechanisms by which DiPT produces

selective auditory changes are unknown. Derivatives of DiPT include 4-HO-DiPT (iprocin) and 5-MeO-DiPT (foxy methoxy), among others. b4d62b6d4a PT-658 was one of a group of PT boats assigned to Motor Torpedo Boat Squadron 45 in April 1945, for transfer to the USSR under Lend-Lease. By the time she was completed on 30 July 1945, this transfer had been cancelled. PT-658 was transported to Bremerton, Washington on the deck of LST-375 from New Orleans along with PT-657, PT-659, and... b4d62b6d4a == Definition of terms == b4d62b6d4a PT boats were very different from the first generation of torpedo boats, which had been developed at the end of the 19th century and featured a displacement hull form. These first generation torpedo boats rode low in the water, displaced up to 300 tons, and had a top speed of 25 to 27 kn (46 to 50 km/h). During World War I, Italy, the US, and UK developed the first high-performance, gasoline-powered motor torpedo boats (often with top speeds over 40 kn (74 km/h)) and corresponding torpedo tactics, but these projects were all quickly disbanded after the Armistice. Design of World War II PT boats continued to exploit some of the advances in planing hull design borrowed from offshore powerboat racing... b4d62b6d4a Hubert Scott-Paine of the British Power Boat Company had developed planing-hulled fast motor boats in the UK, for various duties including anti-submarine and torpedo attack (MTB). He took his 70-foot MTB design to Elco in 1939, as there was a shortage of suitable engines in the UK at the outbreak of war. British Power Boat Company continued production of his designs in Britain throughout the hostilities. The seakeeping qualities of boats and ease of construction matched to the available Packard engines made a perfect combination. b4d62b6d4a

Industri Kereta Api The Indonesian Government holds the majority of shares through Danantara. company was formed after the national strategic plan, under President Suharto called for the formation of a domestic railway manufacturing company. PT Industri PT Industri Kereta Api (Persero), abbreviated as INKA, is an Indonesian state-owned rolling stock manufacturer it is the only rolling stock manufacturer in Southeast Asia b4d62b6d4a

Individual jurisdictions have adopted varied testing protocols, including whom to test, how often to test, analysis protocols, sample collection and the uses of test results. This variation has likely significantly impacted reported statistics, including case and test numbers, case fatality rates and case demographics. Because SARS-CoV-2 transmission occurs days after exposure (and before onset of symptoms), there is an urgent... b4d62b6d4a == History == b4d62b6d4a

Statistical hypothesis test statistical hypothesis test typically involves a calculation of a test statistic. A statistical hypothesis test typically involves a calculation of a test statistic. Roughly 100 specialized statistical tests are in use. Then a decision is made, either by comparing the test statistic to a critical A statistical hypothesis test is a method of statistical inference used to decide whether the data provide sufficient evidence to reject a particular hypothesis. Then a decision is made, either by

comparing the test statistic to a critical value or equivalently by evaluating a p-value computed from the test statistic

They are currently the largest manufacturer of new rolling stock used on intercity railway lines on the islands of Java, Sumatra and Sulawesi. The company was formed after the national strategic plan, under President Suharto called for the formation of a domestic railway manufacturing company. b4d62b6d4a == History == b4d62b6d4a

COVID-19 testing The two main types of tests detect either the presence of the virus or antibodies produced in response to infection. It is used to assess disease prevalence, which aids the estimation of the infection fatality rate. Antibody tests (serology immunoassays) instead show whether someone once had the disease. called nucleic acid or molecular tests, after molecular biology. As of 2021[update], the most common form of molecular test is the reverse transcription polymerase COVID-19 testing involves analyzing samples to assess the current or past presence of SARS-CoV-2, the virus that causes COVID-19 and is responsible for the COVID-19 pandemic. They are less useful for diagnosing current infections because antibodies may not develop for weeks after infection. Molecular tests for viral presence through its molecular components are used to diagnose individual cases and to allow public health authorities to trace and contain outbreaks b4d62b6d4a

Lüscher developed his color test during his doctoral studies at the University of Basel. He first published the idea at the first World Congress of Psychology in Lausanne in 1947 and later as his thesis in 1949, titled "Color as a Psychological Means of Examination". After expanding and publishing his ideas throughout the next 2 decades, the test gained widespread popularity as it was first translated to English in the 1969 + 1971 editions. b4d62b6d4a The first... b4d62b6d4a == History == b4d62b6d4a

Patrol torpedo boat PT-109 Kennedy's postwar campaigns for elected office often referred to his service on PT-109. PT-109 was an 80-foot (24 m) Elco PT boat (patrol torpedo boat) last commanded by Lieutenant (junior grade) John F. Kennedy's actions in saving his surviving crew after PT-109 was rammed and sunk by a Japanese destroyer earned him several commendations and made him a war hero. Kennedy, future United States president PT-109 was an 80-foot (24 m) Elco PT boat (patrol torpedo boat) last commanded by Lieutenant (junior grade) John F. Back problems stemming from the incident required months of hospitalization at Chelsea Naval Hospital and plagued him the rest of his life. Kennedy, future United States president, in the Solomon Islands campaign of the Pacific theater during World War II b4d62b6d4a
