Visceral fat is composed of several adipose depots including mesenteric, epididymal white adipose tissue (EWAT), and perirenal fat. An excess of adipose visceral fat is known as central obesity, the "pot belly" or "beer belly" effect, in which the abdomen protrudes excessively. This body type is also known as "apple shaped", as opposed to "pear shaped" in which fat is deposited on the hips and buttocks. e03f17c650

Body shape Fitness coaches, Human body shape is a complex phenomenon with sophisticated detail and function. exercise reduces fat in specific parts of the body – for example, that exercising muscles around the belly reduces fat in the belly. Skeletal structure grows and changes only up to the point at which a human reaches adulthood and remains essentially the same for the rest of their life. Growth is usually completed between the ages of 13 and 18, at which time the epiphyseal plates of long bones close, allowing no further growth (see Human skeleton). The general shape or figure of a person is defined mainly by the molding of skeletal structures, as well as the distribution of muscles and fat e03f17c650

Vegetarian bacons such as "soy bacon" also exist. e03f17c650 == Physiology == e03f17c650 Previously treated as being hormonally inert, in recent years adipose tissue has been recognized as a major endocrine organ, as it produces hormones such as leptin, estrogen, resistin, and cytokines (especially TNF α). In obesity, adipose tissue is implicated in the chronic release of pro-inflammatory markers known as adipokines, which are responsible for the development of metabolic syndrome—a constellation of diseases including type 2 diabetes, cardiovascular disease and atherosclerosis. e03f17c650 The *P. macdonnellensis* is commonly found in the rocky environments of Central Australia. It is presumed to have a large population, and generally lives within the confines of protected areas. Therefore, it is unlikely to decline at the rate needed to be listed as an endangered species. e03f17c650 == Regional dishes == e03f17c650 Potbellied may also refer to: e03f17c650 Visceral fat, central abdominal fat, and waist circumference show a strong association with type 2 diabetes. e03f17c650 Bacon is also used for barding and larding roasts, especially game, including venison and pheasant, and may also be used to insulate or flavour roast joints by being layered onto the meat. The body of this species is fairly stout, with a moderately long snout and tail, and very small gill slits. Like other lanternsharks, the velvet belly is bioluminescent, with light-emitting photophores forming a species-specific pattern over its flanks and abdomen e03f17c650

It was first described in 1896 by Sir Walter Baldwin Spencer, who placed it in the genus *Phascogale*. It was for a long time included in the genus *Antechinus*.
