

Finger Nails With Ridges

Some manicures include painting pictures or designs on the nails, applying small decals, or imitation jewels (from 2 dimensions to 3 dimensions). Other nail treatments may include the application of artificial gel nails, tips, or acrylics.

Onychorrhexis (from the Greek words ὄνυχο- ónycho-, "nail" and ῥήξις rhexis, "bursting"), is a brittleness with breakage of finger or toenails that may result from hypothyroidism Onychorrhexis (from the Greek words ὄνυχο- ónycho-, "nail" and ῥήξις rhexis, "bursting"), is a brittleness with breakage of finger or toenails that may result from hypothyroidism, anemia, anorexia nervosa or bulimia, or after oral retinoid therapy. It can also be seen in melanoma that involves the nail and onychomycosis

== Humans == Structure == Their use as evidence has been challenged by academics, judges and the media. There are no uniform standards for point-counting methods, and...

Fingering (sexual act) penetration with a penis, whereas penetration with a finger can be "sexual assault by penetration". Lesbian women often clip their nails in a particular Fingering is sexual stimulation of the vulva (including the clitoris) or vagina by using the fingers. Fingering may also include the use of fingers to stimulate the anus. Vaginal fingering is medically called digital (vaginal) penetration. The term "digital" takes its significance from the English word 'digit', which refers to a finger, thumb, or toe

Nail (anatomy) This suggests that whereas claws are useful on large-diameter branches, wide fingertips with nails and epidermal ridges were A nail is a protective plate characteristically found at the tip of the digits (fingers and toes) of almost all primates (except for marmosets), homologous to the claws in other tetrapod animals. Fingernails and toenails are made of a tough rigid protein called alpha-keratin, a polymer also found in the claws, hooves, and horns of vertebrates. for finger muscles on bones)

Nail polish originated in China and dates back to 3000 BCE. Around 600 BCE, during the Zhou dynasty, the royal house preferred the colors gold and silver. However, red and black eventually replaced these metallic colors as royal favorites. During the Ming dynasty, nail polish was often made from a mixture that included beeswax, egg whites, gelatin, vegetable dyes, and gum arabic.

Nail disease Although the nail is a structure produced by the skin and is a skin appendage, nail diseases have a distinct classification as they have their own signs and symptoms which may relate to other medical conditions. Some nail conditions that show signs of infection or inflammation may require medical assistance. In this condition, the nail cuts into one or both sides of the nail bed, resulting A nail disease or onychosis is a disease or deformity of the nail. "ingrown nails" (unguis incarnatus), can affect either the fingers or the toes

In Europe, Frederick S. N. Douglas, while traveling in Greece in 1810–1812, noticed that the Greek women used to paint their... Usually humans have five digits, the bones of which are termed phalanges, on each hand, although some people have more or fewer than five due to congenital disorders such as polydactyly or oligodactyly, or accidental or intentional amputations. The first digit is the thumb, followed by the index finger, middle finger, ring finger, and little finger or pinkie. According to different definitions, the thumb can be called a finger... Nail technicians, such as manicurists and pedicurists, must be licensed in certain states and countries, and must follow government regulations. Since the skin is manipulated and often times trimmed, there is a risk of spreading infection when tools are used across many people. Therefore, having improper sanitation can pose serious issues. == Signs and symptoms ==

Fingerprint Fingerprint records normally contain impressions from the pad on the last joint of fingers and thumbs, though fingerprint cards also typically record portions of lower joint areas of the fingers. The recovery of partial fingerprints from a crime scene is an important method of forensic science. The recovery of partial fingerprints from a crime scene is an important method A fingerprint is an impression left by the friction ridges of a human finger. Moisture and grease on a finger result in fingerprints on surfaces such as glass or metal. Deliberate impressions of entire fingerprints can be obtained by ink or other substances transferred from the peaks of friction ridges on the skin to a smooth surface such as paper. A fingerprint is an impression left by the friction ridges of a human finger

Trachonychia When the condition occurs on all the twenty nails of the fingers and toes, it is known as twenty-nail dystrophy, most evident in childhood, favoring males. The term is from Greek τραχύς (trakhus) "rough" and ὄνυξ (onyx) "nail". The term is from Greek τραχύς (trakhus) 'rough' and ὄνυξ (onyx) 'nail'. linear ridges (longitudinal striations) on the nails of the fingers and toes. When Trachyonychia is a condition characterized by rough accentuated linear ridges (longitudinal striations) on the nails of the fingers and toes

== Practice == When someone performs fingering on another person's vulva or vagina, it is a form of manual sex, and is analogous to a handjob (manual stimulation of the penis). It may be used for sexual arousal or foreplay, constitute an entire sexual encounter, or be used as non-penetrative sexual activity. Fingering performed on one's own vulva or vagina is a form of masturbation.

Finger hands) such as humans and A finger is a prominent, multi-jointed digit on the forelimbs of tetrapod vertebrate animals with prehensile extremities (i. e. e. A finger is a prominent, multi-jointed digit on the forelimbs of tetrapod vertebrate animals with prehensile extremities (i. fingertip). hands) such as humans and other primates, and is typically covered with a keratinized nail to protect the end (i. In humans, the fingers are opposable and have with two or three phalanges with fairly good flexional range of motion, serving as an important organ of tactile sensation and fine movements, which are crucial to the dexterity of the hands and the ability to grasp and manipulate objects. Most tetrapods have five digits (pentadactyly), with digits that significantly shorter than the metacarpal/metatarsals, which are typically referred to as toes; while digits that are notably elongated are called fingers. e

In Egypt, the lower classes painted their nails a reddish brown with henna. Mummified pharaohs also had their nails painted with henna. 5a294fadbe == History == 5a294fadbe "The longitudinal striations can occur as a normal part of the aging process", and not until the nails start to thin and get a sandpaper look is the condition called trachonychia. The nails are opalescent and frequently are brittle and split at the free margin. There has been evidence of the condition as a cutaneous manifestation of lichen planus. It has also been associated with other diseases such as eczema, psoriasis, alopecia areata, and atopic dermatitis. Trachonychia is often seen in vitiligo patients, suggesting that they are more... 5a294fadbe The main aspect of fingering, whether performed on oneself or performed on someone else, is manual stimulation of the vulva by rubbing with the fingers, insertion of the fingers into the vagina through its opening, or some combination. 5a294fadbe Human fingerprints are detailed, unique, difficult to alter, and durable over the life of an individual, making them suitable as long-term markers of human identity. They may be employed by police or other authorities to identify individuals who wish to conceal their identity, or to identify people who are incapacitated or dead and thus unable to identify themselves, as in the aftermath of a natural disaster. 5a294fadbe == History == 5a294fadbe

Manicure However, it is also as common to perform a French manicure on natural nails. artificial nails. Another technique is to whiten the underside of the nail with white A manicure is a mostly cosmetic beauty treatment for the fingernails and hands performed at home or in a nail salon. When the same is applied to the toenails and feet, the treatment is referred to as a pedicure. Together, the treatments may be known as a mani-pedi. A manicure usually consists of filing and shaping the free edge of nails, pushing and clipping (with a cuticle pusher and cuticle nippers) any nonliving tissue at the cuticle and removing hangnails, treatments with various liquids, massage of the hand, and the application of fingernail polish 5a294fadbe

Trachonychia causes the nails to become opalescent, thin, dull, fragile, and finely longitudinally ridged, and, as a result, distally notched. It can be a manifestation of lichen planus, psoriasis, alopecia areata, immunoglobulin A deficiency, atopic dermatitis, and ichthyosis vulgaris. 5a294fadbe

Nail polish the lower classes painted their nails a reddish brown with henna. N Nail polish (also known as nail varnish in British English or nail enamel) is a lacquer that can be applied to the human fingernails or toenails to decorate and protect the nail plates. In Europe, Frederick S. Mummified pharaohs also had their nails painted with henna. The formula has been revised repeatedly to enhance its decorative properties, to be safer for the consumer to use, and to suppress cracking or peeling. Nail polishes come in all color shades and play a significant part in manicures and pedicures. Nail polish consists of a mix of an organic polymer and several other components that give it colors and textures 5a294fadbe

Nail (fastener) Usually, nails have a sharp point on one end and a flattened head on the other, but headless nails are available. Other types of nails include pins, tacks, brads, spikes, and cleats. Nails are made in a great variety of forms for specialized purposes. The most common is a wire nail. Nails are typically driven into the workpiece by a hammer or nail gun. In woodworking and construction, a nail is a small object made of metal (or wood, called a tree nail or "trunnel") which is used as a fastener, as a peg to hang something, or sometimes as a decoration. wire nail. Other types of nails include pins, tacks, brads, spikes, and cleats 5a294fadbe

Nails are typically driven into the workpiece by a hammer or nail gun. A nail holds materials together by friction in the axial direction and shear strength laterally. The point of the nail is also sometimes bent over or clinched after driving to prevent pulling out. 5a294fadbe
