skin, or injection into the spinal cord area; transdermal; intravenously; or via rectal suppository.). 611—. Physical and psychological dependence and tolerance may develop with repeated administration. Its maximum effect is reached after about 20 minutes when administered intravenously and 60 minutes when administered by mouth, while the duration of its effect is 3–7 hours. It is mainly used as an analgesic (pain medication). Generic long-acting formulations are also available.

Morphine, formerly known as morphium, is an opiate found naturally in opium, a dark brown resin produced by drying the latex of opium poppies (*Papaver somniferum*). Elsevier Health Sciences. Long-acting formulations of morphine are sold under the brand names MS Contin and Kadian, among others. It can be taken for both

Does Anesthesia Make You Constipated

Diverticulitis, also called colonic diverticulitis, is a gastrointestinal disease characterized by inflammation of abnormal pouches—diverticula—that can develop in the wall of the large intestine. Symptoms typically include lower abdominal pain of sudden onset, but the onset may also occur over a few days. People may experience a single attack, repeated attacks, or ongoing "smoldering" diverticulitis. Contrary to the widespread belief that patients with diverticulosis are constipated. There may also be nausea, diarrhea or constipation. Fever or blood in the stool suggests a complication

scoliosis are determined in part by the severity of the curvature and skeletal maturity, which together help predict the likelihood of progression. Non-surgical treatment (conservative treatment) should be pro-active with intervention performed early as "Best results were obtained in 10-25 degrees scoliosis which is a good indication to start therapy before more structural changes within the spine establish. The body is used to a normal diet, and used to excreting waste in a The management of scoliosis is complex and is determined primarily by the type of scoliosis encountered: syndromic, congenital, neuromuscular, or idiopathic. " Treatment options have historically been categorized under the following types: 78a1390f5f

The causes of diverticulitis are unclear. Risk factors may include obesity, lack of exercise, smoking, a family history of the disease, and use of nonsteroidal anti-inflammatory drugs (NSAIDs). The role of a low fiber diet as a risk factor is unclear. Having pouches in the large intestine that are not inflamed is known as

diverticulosis. Inflammation occurs in 10% and 25% at some point in time and is due to a bacterial infection. Diagnosis is typically by CT scan. However, blood tests, colonoscopy, or a lower gastrointestinal series may also be supportive. The differential diagnoses include irritable bowel syndrome. Surgery
