Anemia in pregnancy Anemia is an extremely common condition in pregnancy world-wide, conferring a number of health risks to mother and child. Maternal signs and symptoms are usually non-specific, but can include: fatigue, pallor, dyspnea, palpitations, and dizziness. There are numerous well-known maternal consequences of anemia including: maternal cardiovascular strain, reduced physical and mental performance, reduced peripartum blood reserves, increased risk for peripartum blood product transfusion, and increased risk for maternal mortality. Suggested tests include: hemoglobin and hematocrit (ratio of red blood cells to the total blood volume), mean corpuscular volume (MCV), mean corpuscular Anemia is a condition in which blood has a lower-than-normal amount of red blood cells or hemoglobin. Anemia in pregnancy is a decrease in the total red blood cells (RBCs) or hemoglobin in the blood during pregnancy. patient. While anemia in pregnancy may be pathologic, in normal pregnancies, the increase in RBC mass is smaller than the increase in plasma volume, leading to a mild decrease in hemoglobin concentration referred to as physiologic (or dilutional) anemia

Bacterial STIs include chlamydia, gonorrhea, and syphilis. Viral STIs include genital warts, genital herpes, and HIV/AIDS. Parasitic STIs include trichomoniasis. Most STIs, such as syphilis, gonorrhea, chlamydia and trichomoniasis, are treatable and curable. Others, such as HIV/AIDS and genital herpes, are not curable. Some vaccinations have been known to decrease the risk of certain infections including hepatitis B and a few types of HPV. The red blood cell indices, which indicate the average size and hemoglobin content of red blood cells, are also reported, and a white blood cell differential, which counts the different types of white blood cells, may be included

The cause of rheumatoid arthritis is believed to involve a combination of genetic and environmental factors. The underlying mechanism involves the body's immune system attacking the joints. This results in inflammation and thickening of the joint capsule. It also affects the underlying bone and cartilage. The diagnosis is based on a person's signs and symptoms. X-rays and laboratory testing may support a diagnosis or exclude other diseases with similar symptoms. Other diseases that may present similarly include systemic lupus erythematosus, psoriatic arthritis, and fibromyalgia.

Sexually transmitted infection STIs often do not initially cause symptoms, which results in a risk of transmitting them to others. Some STIs can cause infertility. Symptoms and signs of STIs may include vaginal discharge, penile discharge, ulcers on or around the genitals, and pelvic pain. Platinum was introduced in March 1997 and the first titles under it were Air Combat, Battle Arena Toshinden, Destruction Derby, Ridge Racer, Tekken and Wipeout. At launch, a game required a minimum of 100,000 sales across the PAL region and needed to have been on sale for at least one year before qualifying for a Platinum re-release. These criteria were later tightened, reducing the required time on sale to nine months while raising the sales threshold to 250,000 copies. The threshold was subsequently raised again to 400...

In the 1860s, the colony of Victoria was rife with diseases such as diphtheria, typhoid, smallpox and scarlet fever. At the time, Melbourne had two general hospitals, Melbourne and Alfred and three specialist hospitals, Lying-In, Children's and Eye and Ear. These five hospitals were unable to cope with the annual bouts of infectious diseases which recurred frequently. The Colonial Government began discussing the idea of constructing a hospital to treat patients with infectious diseases. Two sites were considered...

Rheumatoid arthritis (subscription required) Renger F, Bang H, Fredenhagen G, et al. It typically results in warm, swollen, and painful joints. This may result in a low red blood cell count, inflammation around the lungs, fever, low energy and inflammation around the heart. Often, symptoms come on gradually over weeks to months. Pain and stiffness often worsen following rest. The disease may also affect other parts of the body, including skin, eyes, lungs, heart, nerves, and blood. Most commonly, the wrist and hands are involved, with the same joints typically involved on both sides of the body.

The CBC is often carried out as part of a medical assessment and can be used to monitor health or diagnose diseases. The results are interpreted by comparing them to reference ranges, which vary with sex and age. Conditions like anemia and thrombocytopenia are defined by abnormal complete blood count results. The red blood cell indices can provide information about the cause of a person's anemia such as iron deficiency and vitamin B12 deficiency, and the results of the white blood cell differential can help to diagnose viral, bacterial and parasitic infections and blood disorders like leukaemia...
