Pedometer Distance traveled (by walking or any other means) can be measured directly by a GPS receiver. Because the distance of each person's step varies, an informal calibration, performed by the user, is required if presentation of the distance covered in a unit of length (such as in kilometers or miles) is desired, though there are now pedometers that use electronics and software to determine how a person's step varies automatically. If one shakes A pedometer, (from Latin pēs, meaning "foot", and Ancient Greek μέτρον (métron), meaning "measure") or step-counter, is a device, usually portable and electronic or electromechanical, that counts each step a person takes by detecting the motion of the person's hands or hips. Early forms used a mechanical switch to detect steps together with a simple counter. includes a mechanical sensor and software that counts steps fcba9557f8
