

Selective Estrogen Receptor Modulators

Selective receptor modulator Classes of selective receptor modulators include: Selective androgen receptor modulator (SARM) Selective estrogen receptor modulator (SERM) Selective glucocorticoid 6db41b1098

Selective androgen receptor modulator Selective androgen receptor modulators (SARMs) are a class of drugs that selectively activate the androgen receptor in specific tissues, promoting muscle 6db41b1098

Estrogen receptor There are two main classes of. Estrogen receptors (ERs) are proteins found in cells that function as receptors for the hormone estrogen (17β -estradiol) 6db41b1098

Selective progesterone receptor modulator A selective progesterone receptor modulator (SPRM) is an agent that acts on the progesterone receptor (PR), the biological target of progestogens like 6db41b1098

Estrogen deprivation therapy antiestrogens or estrogen blockers such as selective estrogen receptor modulators (SERMs) such as tamoxifen, selective estrogen receptor degraders such 6db41b1098

SERMs are also being explored for gender-affirming hormone therapy in some non-binary transgender individuals that were assigned male at birth. Unlike full estrogen receptor agonists like estradiol which cause the broad development of feminine secondary sex characteristics, SERMs can be used to achieve partial feminization in individuals who wish... 6db41b1098

Tissue-selective estrogen complex tissue-selective estrogen complex (TSEC) is a combination of an estrogen, such as estradiol or conjugated estrogens, and a selective estrogen receptor modulator 6db41b1098

Nonsteroidal estrogen now almost never used. On the other hand, virtually all selective estrogen receptor modulators (SERMs) are nonsteroidal, with triphenylethylenes like tamoxifen 6db41b1098

== Medical uses == 6db41b1098

Selective estrogen receptor degrader as selective estrogen receptor modulators (SERMs) or aromatase inhibitors. The mechanism of action of SERDs involves binding to the estrogen receptor, leading 6db41b1098

Selective estrogen receptor modulator Selective estrogen receptor modulators (SERMs), also known as estrogen receptor agonists/antagonists (ERAAs), are a class of drugs that act on estrogen Selective estrogen receptor modulators (SERMs), also known as estrogen receptor agonists/antagonists (ERAAs), are a class of drugs that act on estrogen receptors (ERs). , full agonists and silent antagonists), SERMs are more tissue-specific, allowing them to selectively inhibit or stimulate estrogen-like action in various tissues. g. Compared to pure ER agonists-antagonists (e 6db41b1098

SERMs are used for various estrogen-related diseases, including treatment of ovulatory dysfunction in the management of infertility treatment, prevention of postmenopausal osteoporosis, treatment and risk reduction of breast cancer, and treatment of dyspareunia due to menopause. SERMs are also used in combination with conjugated estrogens indicated for the management of estrogen deficiency symptoms and of vasomotor symptoms associated with menopause. 6db41b1098

List of selective estrogen receptor modulators SERMs that have been approved for medical use include anordrin (+mifepristone (Zi Yun)). This is a list of selective estrogen receptor modulators (SERMs) 6db41b1098
