GLP-1 receptor agonist tirzepatide (a GIP analog with dual GLP-1 receptor and GIP receptor agonism; Mounjaro for diabetes, Zepbound for weight management, manufactured by Eli Lilly) Glucagon-like peptide-1 (GLP-1) receptor agonists, also known as GLP-1 agonists, GLP-1RAs, and informally as simply GLP-1s, are a class of medications that activate the GLP-1 receptor, causing reduced blood sugar, reduced appetite, and reduced energy intake. Incretin mimetics are substances that mimic the actions of incretin hormones such as GLP-1 and GIP. GLP-1 analogs are molecules that are structurally almost identical to the endogenous GLP-1 hormone 36fa17007f

Weight loss drugs have been developed since the early twentieth century, and many have been banned or withdrawn from the market due to adverse effects, including deaths; other drugs proved ineffective. Although many earlier drugs were stimulants such as amphetamines, in the early 2020s, GLP-1 receptor agonists became popular for weight loss. 36fa17007f Rishi Sunak (Conservative) (until 5 July) 36fa17007f == Incumbents == 36fa17007f Monarch - Charles III 36fa17007f

The understanding of anorexiants effects is crucial in the development of interventions for weight management, eating disorders, and related health concerns. These substances work by affecting the central nervous system or certain neurotransmitters to create a feeling of fullness or reduce the desire to eat. The anorexiants effect can be induced through diverse mechanisms, ranging from hormonal regulation to neural signaling. Ghrelin, leptin, and peptide YY are among the hormones involved in appetite control 36fa17007f
