Some traits are part of an organism's physical appearance, such as eye color or height. Other sorts of traits are not easily seen and include blood types or resistance to diseases. Some traits are inherited through genes, which is the reason why tall and thin people tend to have tall and thin children. Other traits come from interactions between genes and the environment, so a child who inherited the tendency of being tall will still be short if poorly nourished. The way the genes and environment interact to produce a trait can be complicated. For example, the chances of somebody dying of cancer or heart disease seems to depend on both their genes and their lifestyle.

Prehistory and history

People's hairstyles are largely determined by the fashions of the culture they live in. Hairstyles have played an important role in human culture for centuries, serving not only as a form of personal appearance but also as a way to represent cultural traditions, social roles, identity, and changing fashion trends. Hairstyles are markers and signifiers of social class, age, marital status, racial identification, political beliefs, and attitudes about gender.

Toupée comes from the French toupet, meaning tuft of hair, as in a curl or lock of hair at the top of the head, not necessarily relating to covering baldness.

The simplest and most common version is a flat, solid, three-stranded structure. More complex patterns can be constructed from an arbitrary number of strands to create a wider range of structures. The structure is usually long and narrow with each component strand functionally equivalent in zigzagging forward through the overlapping mass of the others. Incorporating more hair as the braid progresses, either from the head or from separate wefts of hair, can create other styles such as knotless braids and French braids. Small items like beads and shells can also be incorporated into the braid.

Red hair varies in hue from a deep burgundy or bright copper, or auburn, to burnt orange or red-orange to strawberry blond. Characterized by high levels of the reddish pigment pheomelanin and relatively low levels of the dark pigment eumelanin, it is typically associated with type I of the Fitzpatrick scale, freckles, and sensitivity to ultraviolet light, although it is also frequent in darker skinned individuals of different races.

Charlie Brown first catches sight of her in the November 19, 1961, strip, saying he would "give anything in the world if that little girl with the red hair would come over and sit with me." In July 1969, a story arc ran depicting the Little Red-Haired Girl moving away. Charlie Brown despaired that he would never see her again. He saw her from a distance later that year while skiing. 4370fa50a8 While never seen in the strip, she appears in several television specials, in which her name has been revealed as Heather Wold. Charlie Brown most often notices her while eating lunch outdoors, always failing to muster the courage to speak to her. She figures prominently in Valentine's Day strips, several of which focus on Charlie Brown's hope of getting a valentine from her. Charlie Brown typically attempts to give her a valentine but panics at the last minute. 4370fa50a8 In their 2014 book Hair Story: Untangling the Roots of Black Hair in America, Ayana Byrd and Lori Tharps claimed that the name dreadlocks originated in the time of the slave trade: when transported Africans disembarked from the slave ships after spending months confined in unhygienic conditions, whites would report that their undressed and matted kinky hair was "dreadful". According to them, it is due to these circumstances that many people wearing the style today drop the a in dreadlock to avoid negative implications. 4370fa50a8 == Geographic distribution == 4370fa50a8
