Improvements in computing technology since the 1980s, driven by the rapid advancement of smartphones, paved the way for wearable tracker devices with integrated sensors. Frequently data such as fitness, mood, sleep, water intake, medicine usage, sexual activity, menstruation, and potential illnesses is synced with mobile apps. This has led to privacy concerns regarding how consumer information is stored and analyzed by the companies involved.

Drowsiness can impair a driver's mental stability, reducing their ability to make sound decisions and potentially leading to physical harm and financial losses for both the driver and passengers.
The designers intend the system to provide almost full-time communication, even with satellites in low Earth orbit that often have reduced visibility from ground stations. It makes on-demand data available to, for example, rescue workers who want near-real-time satellite data of a crisis region.
