

# Can Eggs Cause Constipation

Types of Taenia that cause infections in humans include Taenia solium (pork tapeworm), Taenia saginata (beef tapeworm), and Taenia asiatica (Asian tapeworm). Taenia saginata is due to eating contaminated undercooked beef while Taenia solium and Taenia asiatica is from contaminated undercooked pork. Diagnosis is by examination of stool samples. edb6ab04ba == Species == edb6ab04ba The genus Bertiella has 29 cestode species that infect primarily non-human primates. B. studeri and B. mucronata can cause the condition in humans. It usually occurs in children with close contact to non-human primates. This is known to occur in Africa, Asia, Oceania, South America and Cuba. edb6ab04ba Infection may be suspected when a portion of the worm is... edb6ab04ba Human feces have similarities to the feces of other animals and varies significantly in appearance (i.e. size, color, texture), according to the state of the diet, digestive system, and general health. Normally, human feces are semisolid, with a mucus coating. Small pieces of harder, less moist feces can sometimes be seen impacted in the distal (final or lower) end. This is a normal occurrence when a prior bowel movement is incomplete, and feces are returned from the rectum to the large intestine, where water is further absorbed. edb6ab04ba

Parasitic bronchitis Hoose is essentially an infantile disease, almost always afflicting animals under one year of age. It is marked by cough, dyspnea, anorexia and constipation. It is marked by cough, dyspnea, anorexia and constipation. Lungworms that cause parasitic bronchitis include nematodes of the genera Dictyocaulus, Metastrongylus, and Protostrongylus. Lungworms that cause parasitic bronchitis include nematodes of the genera Dictyocaulus Parasitic bronchitis, also known as hoose, husk, or verminous bronchitis, is a disease of sheep, cattle, goats, and swine caused by the presence of various species of parasite, commonly known as lungworms, in the bronchial tubes or in the lungs. in the lungs edb6ab04ba

If a specific cause for pruritus ani is found it is classified as "secondary pruritus ani". If a specific cause is not found it is classified as "idiopathic pruritus ani". The irritation can be caused by intestinal parasites, anal perspiration, frequent liquid stools, diarrhea, residual stool deposits, or the escape of small amounts of stool as a result of incontinence or flatulence. Another cause is yeast infection or candidiasis. Some diseases increase the possibility of yeast infections, such as diabetes mellitus or HIV infection. Treatment with antibiotics can bring about a disturbance of the natural balance of intestinal flora, and lead to perianal thrush, a yeast infection affecting the anus. Psoriasis may also be present in the anal area and... edb6ab04ba Diphyllbothriasis mostly occurs in regions where raw fish is regularly consumed; those who consume raw fish are at risk of infection. The infection is often asymptomatic and usually presents only with mild symptoms, which may include gastrointestinal complaints, weight loss, and fatigue. Rarely, vitamin B12 deficiency (possibly leading to anaemia) and gastrointestinal obstructions may occur. Infection may be long-lasting in absence of treatment. Diphyllbothriasis is generally diagnosed by looking for eggs or tapeworm segments in passed stool. Treatment with antiparasitic medications is straightforward, effective, and safe. edb6ab04ba == Biography == edb6ab04ba

Ernest H. Tipper C. Tipper came to the conclusion that constipation and excessive meat-eating were the causes of cancer. According to Tipper the Béné tribe, who Ernest Harry Tipper M. S was an English physician, surgeon and alternative cancer treatment advocate. R. European diet edb6ab04ba

*Bertiella mucronata* This is one of two species of *Bertiella* that can cause the condition *Bertiella mucronata* is a species of *Bertiella*, a type of cestode tapeworms known to cause *Bertielliasis*. This is one of two species of *Bertiella* that can cause the condition in humans (the other being *Bertiella studeri*). known to cause *Bertielliasis*. It belongs to the genus *Bertiella*, family *Anoplocephalidae*. It belongs to the genus *Bertiella*, family *Anoplocephalidae* edb6ab04ba

Taeniasis generally has few or no symptoms. It takes about 8 weeks from infection for adult worms to form and can last for years without treatment. edb6ab04ba == Signs and symptoms == edb6ab04ba == Cause == edb6ab04ba According to Tipper the Béné tribe, who live in the Niger Delta amongst whom he practised for twenty years, are almost free from cancer and live on a semi-vegetarian diet. They live on beans, fruits, seeds, monkey nuts, yams, maize, cayenne peppers, palm oil and occasionally palm wine. Tipper reported that they use 4 oz. of red palm oil daily. They eat eggs and fish, the occasional chicken but rarely any red meat. The drinking of milk is repulsive to the natives. Tipper reported that the men can carry a load of 50 lb on their heads 25 miles a day in tropical heat and their bones and teeth are remarkable. Tipper... edb6ab04ba == Biography == edb6ab04ba Tipper served for many years in the West African Medical Service. He authored *The Cradle of the World and Cancer*, in 1927. The book was based on his twenty years of medical practice in Nigeria. He examined only six cases of cancer out of an estimated 300,000 patients. The Nigerian diet was low in meat and high in fibre which is opposite to the European diet. Tipper came to the conclusion that constipation and excessive meat-eating were the causes of cancer. edb6ab04ba

Pruritus ani If this is not effective topical steroids or injected methylene blue Pruritus ani is the irritation of the skin at the exit of the rectum, known as the anus, causing the desire to scratch. irritation and trauma to the perianal area. The intensity of anal itching increases from moisture, pressure, and rubbing caused by clothing and sitting. Stool softeners can help prevent constipation. It is estimated that up to 5% of the population of the United States experiences this type of discomfort daily. At worst, anal itching causes intolerable discomfort accompanied by burning and soreness edb6ab04ba

It can be diagnosed through fecal examination or taking a sputum sample and treated by killing the nematode larvae and adults. In severe cases, additional antibiotics may be needed. The most effective prevention is via vaccination, especially important for cattle. edb6ab04ba Human feces together with human urine are collectively called human waste... edb6ab04ba Barker was born in Cologne as Otto Julius Eltzbacher and was naturalised as a British citizen in 1900. Barker wrote on politics warning Britain about the danger of conflict with the Kaiser's Germany and advocated free trade. He attempted to conceal his German Jewish origins. Barker was taught homeopathy by John Henry Clarke an anti-Semite. Barker became an influential British homeopath and took over the editorship of *The Homeopathic World* from Clarke in 1932. He renamed the magazine *Heal Thyself* which he co-edited with his wife, Eileen Homer. He was Honorary Secretary of the New Health Society. edb6ab04ba *T. saginata* has a strong resemblance to the other human tapeworms, such as *Taenia asiatica* and... edb6ab04ba The currently recognized species in this genus are: edb6ab04ba == Signs and symptoms == edb6ab04ba == Causes == edb6ab04ba == Epidemiology == edb6ab04ba Prevention is by properly cooking meat. Treatment is generally with praziquantel, though niclosamide may also be used. Together with cysticercosis, infections affect about 50 million people globally. The disease is most common in the developing world. In the United States fewer than 1,000 cases occur annually. edb6ab04ba The cause for parasitic bronchitis is the nematode called *Dictyocaulus viviparus*. In the infected animal's fecal matter the larvae later become infective. When animals eat in the infected pasture they ingest the parasite. As the larvae travel towards the respiratory system, they mature, and by the time they reach the lungs, they are full adults. Once they reach the lungs the females lay eggs... edb6ab04ba

*Taenia saginata* It is found globally and most prevalently where cattle are raised and beef is consumed. It is an intestinal parasite in humans causing taeniasis (a type of

helminthiasis) and cysticercosis in cattle. From humans, embryonated eggs, called oncospheres, are released with faeces and are transmitted to cattle through contaminated fodder. As hermaphrodites, each body segment called proglottid has complete sets of both male and female reproductive systems. It is relatively common in Africa, Europe, Southeast Asia, South Asia, and Latin America. the uterus contains up to 15 side branches filled with eggs. Cattle acquire the embryonated eggs, the oncospheres, when they eat contaminated food. Humans are generally infected as a result of eating raw or undercooked beef which contains the infective larvae, called cysticerci. Cattle are the intermediate hosts, where larval development occurs, while humans are definitive hosts harbouring the adult worms. Thus, reproduction is by self-fertilisation. Oncospheres *Taenia saginata* (synonym *Taeniarhynchus saginatus*), commonly known as the beef tapeworm, is a zoonotic tapeworm belonging to the order Cyclophyllidea and genus *Taenia*. Oncospheres develop inside muscle, liver, and lungs of cattle into infective cysticerci edb6ab04ba

*Pterophyllum* should not be confused with marine angelfish, perciform fish found on shallow ocean reefs. edb6ab04ba

J. Ellis Barker &quot; He stated that constipation is caused by the overuse of food preservatives, stress James Ellis Barker (9 May 1870 – 16 July 1948) was a British historian, journalist, homeopath and naturopath. Barker was also an alternative cancer treatment advocate who promoted the idea that cancer is caused by autointoxication from chronic poisoning and vitamin starvation. of the bowel. Apparently civilization and constipation go hand in hand edb6ab04ba

Taeniasis Symptoms may occasionally include weight loss or abdominal pain. It can cause antigen Taeniasis is an infection within the intestines by adult tapeworms belonging to the genus *Taenia*. Segments of tapeworm may be seen in the stool. There are generally no or only mild symptoms. infection causes weight loss, dizziness, abdominal pain, diarrhea, headaches, nausea, constipation, chronic indigestion, and loss of appetite. Complications of pork tapeworm may include cysticercosis edb6ab04ba

Human feces It also contains bacteria and a relatively small amount of metabolic waste products such as bacterially altered bilirubin, and the dead epithelial cells from the lining of the gut. that are infrequent or hard to pass. It is discharged through the anus during a process called defecation. Constipation is a common cause of painful defecation. Severe constipation includes obstipation (failure to pass Human feces (American English) or faeces (British English), commonly and in medical literature more often called stool, commonly referred to as poo or poop, are the solid or semisolid remains of food that could not be digested or absorbed in the small intestine of humans, but has been further broken down by bacteria in the large intestine edb6ab04ba

*Pterophyllum* As is the case for other cichlids, brood care is highly developed. The three species of *Pterophyllum* are unusually shaped for cichlids, being greatly laterally compressed, with round bodies and elongated triangular dorsal and anal fins. Naturally occurring angelfish are frequently striped transversely, colouration which provides additional camouflage. All *Pterophyllum* species originate in the Amazon Basin, Orinoco Basin and various rivers in the Guiana Shield in tropical South America. Angelfish are ambush predators and prey on small fish and macroinvertebrates. bottom, or swimming at unusual angles. All *Pterophyllum* species form monogamous pairs. The causes can be diverse, ranging from overfeeding, constipation, and rapid water temperature changes to physical *Pterophyllum* is a small genus of freshwater fish from the family Cichlidae known to most aquarists as angelfish. Eggs are generally laid on a submerged log or a flattened leaf but can also be laid on filter piping when kept in an aquarium setting. This body shape allows them to hide among roots and plants, often on a vertical surface edb6ab04ba

Diphyllobothriasis latum and D. nihonkaiense). identifying proglottid segments, or characteristic eggs in the faeces. Eggs are usually numerous and can be demonstrated without concentration techniques Diphyllobothriasis is the infection caused by tapeworms of the genus Diphyllobothrium (commonly D edb6ab04ba
