(Original description) The very coarse and strong, long, narrow shell has with a concave conical base. It shows huge hunchy ribs, and coarse spiral threads. Its longitudinal sculpture is characterized by six enormous bunchy oblique ribs on each whorl, which die out on the base and at the sinus below the suture, but reach the suture at the bottom of the upper whorls. They are parted by broad open furrows, which run obliquely to the left and more or less continuously down the spire. These ribs and furrows are roughened by coarse unequal lines of growth. The surface is scored by strong rough spiral threads parted by wider furrows. These threads are absent in the deep, strong, shallow, sinus-furrow below the suture, in which, however, a few feeble spiral threads are found. Two, a little stronger, marginate the underside of the suture. The shell of the holotype is weathered, but seems to have been of a uniform pale tint. The spire is very tall, narrow, and conical. The apex broken. There remain 11 convex whorls of slow increase. The... 45df534294 Clusters of reddish to maroon flowers bloom from April through August. Trencadís, a Catalan term that means 'broken up', and by extension, 'broken up tiles', is the name for this method as it was revived in early 20th century Catalan Modernisme, while pique assiette is a more general name for the technique that comes from the French language. In French, pique assiette ('plate thief') is a term for a scrounger or sponger, and thus, as a name for this mosaic technique, it refers to the recycled or 'scrounged' nature of the materials. 45df534294 The Mycenaeans (ca. 1800–1050 BC) built tholos tombs, also called beehive tombs, which were underground structures with conical vaults. The style was contemporaneous with several unique local styles of Gothic: the Flamboyant in France and Belgium, the Isabelline in Spain, the Manueline in Portugal and the Perpendicular in England. Like these, the Sondergotik showed an attention to detail both within and without. In many Sondergotik buildings, fluidity and a wood-like quality were stressed in carving and decoration, particularly on vaults. The rib patterns of Sondergotik vaults are elaborate and often curved (in plan), sometimes using broken and flying ribs (features extremely rare in other regions). Outside, the buildings tended towards mass buttressing... 45df534294 == Description == 45df534294
