Shailagh Murray described Fahrenheit 9/11 in The Wall Street Journal as a "harshly satirical and controversial portrait of the Bush presidency." Stephen Dalton of The Times wrote that the movie "hits enough of its satirical targets to qualify as an important and timely film." Desson Thomson says "there is more to Fahrenheit 9/11 than partisan ridicule. ... What's remarkable here isn't Moore's political animosity or ticklish wit. It's the well-argued, heartfelt power of his persuasion." Author and blogger Andrew Sullivan expressed...

The hottest month of the year in Birnin Magaji is April, with an average high temperature of 38 °C (101 °F) and low temperature of 25 °C (77 °F). The critics' response was described as "irk[ed]" by the BBC. A number of critics described the film as a campaign advertisement for George W. Bush. Several believed that the movie would appeal primarily to convinced supporters of George W. Bush and... Due to thermal expansion, precision length measurements need to be made at (or converted to) a defined temperature. ISO 1 helps in comparing measurements by defining such a reference temperature. The reference temperature of 20 °C was adopted by the International Committee for Weights and Measures on 15 April 1931, and this temperature was used in ISO recommendation number 1 in 1951. It soon replaced worldwide other reference temperatures for length measurements that manufacturers of precision equipment had used, including 0 °C, 62 °F, and 25 °C. Among the reasons for choosing 20 °C was that this was a comfortable and practical workshop temperature and that it resulted in an integer value on both the Celsius and Fahrenheit scales.

Celsius The degree Celsius (symbol: °C) can refer to a specific point on the Celsius temperature scale or to a difference or range between two temperatures. In 1948, the International Committee for Weights and Measures renamed it to honor Celsius and also to remove confusion with the term for one hundredth of a gradian in some languages. The unit was called centigrade in several languages (from the Latin centum, which means 100, and gradus, which means steps) for many years. It is named after the Swedish astronomer Anders Celsius (1701–1744), who proposed the first version of it in 1742. Most countries use this scale, with the exception of the United States, some island territories, and Liberia, where the Fahrenheit scale is still used. The degree Celsius is the unit of temperature on the Celsius temperature scale (originally known as the centigrade scale in English), one of two temperature The degree Celsius is the unit of temperature on the Celsius temperature scale (originally known as the centigrade scale in English), one of two temperature scales used in the International System of Units (SI), the other being the closely related Kelvin scale 409c29bb1f

As on the Kelvin scale, which was first proposed in 1848, zero on the Rankine scale is absolute zero, but a temperature difference of one Rankine degree (°R or °Ra) is defined as equal to one Fahrenheit degree, rather than the Celsius degree used on the Kelvin scale. Although Fahrenheit 9/11 was generally praised by film critics and won various awards including that year's Palme d'Or, the content was criticized by several commentators for accuracy, and lack of context. The film, directed by Michael Moore, criticizes the Bush administration's attempt to pursue Osama bin Laden in the aftermath of the September 11 attacks, as well as the Iraq War. S. S 409c29bb1f

A degree

can be defined as a set change in temperature measured against a given scale; for example, one degree Celsius is one-hundredth of the temperature change between the point at which water starts to change state from solid to liquid state and the point at which it starts to change from its liquid to gaseous state. The degree symbol ° is usually used, followed by the initial letter of the unit; for example, "°C" for degree Celsius 409c29bb1f
