== Plot == 68493dfcbc

Heroin Medical-grade diamorphine is used as a pure hydrochloride salt. Various white and brown powders sold illegally around the world as heroin are routinely diluted with cutting agents. Black tar heroin is a variable admixture of morphine derivatives—predominantly 6-MAM (6-monoacetylmorphine), which is the result of crude acetylation during clandestine production of street heroin. Heroin, also known as diacetylmorphine and diamorphine among other names, is a morphinan opioid substance synthesized from the dried latex of the opium poppy; it is mainly used as a recreational drug for its euphoric effects. Heroin is used medically in several countries to relieve pain, such as during childbirth or a heart attack 68493dfcbc

Common side effects include respiratory depression (decreased breathing), dry mouth, drowsiness, impaired mental function, constipation... 68493dfcbc The chemical name of heroin is diacetylmorphine. Other forms of heroin require additional steps of purification post acetylation. With black tar, the product's processing stops immediately after acetylation. Its unique consistency however is due to acetylation without a reflux apparatus; as is the case with homebake heroin in Australia and New Zealand, this crude acetylation results in a gelatinous mass. 68493dfcbc Heroin is typically injected, usually into a vein, but it can also be snorted, smoked, or inhaled. In a clinical context, the route of administration is most commonly intravenous injection; it may also be given by intramuscular or subcutaneous injection, as well as orally in the form of tablets. The onset of effects is usually rapid and lasts for a few hours. 68493dfcbc == Background == 68493dfcbc In the lead-up to the album, music videos were released for the songs "Clockwork", "Supernatural", "Medication Nation", "Mountain Lion", and "Voodoo Juju". The lack of proper reflux during acetylation fails to remove much of the moisture retained in the acetylating agent, acetic anhydride. The acetic anhydride reacts with the moisture to produce the milder acetylating agent glacial acetic acid which is unable to acetylate the 3 position of the morphine molecule. It is harder to acetylate the 6 position without affecting the 3 position... 68493dfcbc
