Early devices, such as ear trumpets or ear horns, were passive amplification cones designed to gather sound energy and direct it into the ear canal.

Hearing aid A hearing aid is a device designed to improve hearing by making sound audible to a person with hearing loss. Hearing aids are classified as medical devices in most countries, and regulated by the respective regulations. Small audio amplifiers such as personal sound amplification products (PSAPs) or other plain sound reinforcing systems cannot be sold as "hearing aids". Hearing aids are classified as medical devices A hearing aid is a device designed to improve hearing by making sound audible to a person with hearing loss

Cochlear implant appropriately fit hearing aids, but with criteria now defined by test scores of less than or equal to 60% correct in the best-aided listening condition

Modern hearing aids require calibration and configuration to match the hearing loss, physical features, and lifestyle of the wearer. The hearing aid is fitted to the most recent audiogram and is programmed by frequency. This process, called... Retrieved September 3, 2015. com. In 2025, Eargo merged with Hearx to form an over-the-counter hearing aid company named LXE Hearing. Retrieved Eargo, Inc

The word otosclerosis derives from Greek ὠτός (ōtos), genitive of οὖς (oûs) "ear" + σκλήρωσις (sklērōsis), "hardening".

Otosclerosis [citation Otosclerosis is a condition of the middle and inner ear where portions of the dense enchondral layer of the bony labyrinth remodel into one or more lesions of irregularly-laid spongy bone. The term otosclerosis is something of a misnomer: much of the clinical course is characterized by lucent rather than sclerotic bony changes, so the disease is also known as otospongiosis. Without eventual surgery, deafness is likely to result. As the lesions reach the stapes the bone is resorbed, then hardened (sclerotized), which limits its movement and results in hearing loss, tinnitus, vertigo or a combination of these. due to the progressive nature of this condition, use of a hearing aid is palliative at best

Eargo filed for an IPO on September... Eargo announced \$25 million in Series B funding led by New Enterprise Associates in December 2015, and in October 2017 closed the first tranche of Series C funding intended to raise \$45m. There were other subsequent rounds of funding including a \$52M series-D in 2019 and a \$71M series-E in mid 2020. In 2013, the company received seed funding from various a range of funds and angels, including Maveron. In June 2015, they received \$13.6 million in Series A funding from a group of 9 investors, including Maveron, Crosslink Capital, Dolby Family Ventures, and Birchmere Ventures.

Tinnitus hearing loss, a pure tone hearing test resulting in an audiogram may help diagnose a cause. An audiogram may also facilitate fitting of a hearing aid

Doppler Labs The company designed and manufactured in-ear computing technology, including earplugs and wireless smart earbuds. The company supported the Over-the-Counter Hearing Aid Act of 2017 (OTC Hearing Aid Act). On November 1, 2017, Doppler Labs announced that Doppler Labs was a San Francisco-based audio technology company, founded in 2013. trademark

Before voice assistants or true wireless technology were prevalent, Doppler Labs envisioned that computing would move onto the body and into the ear and that voice would become a more primary interface for how humans interact with technology. With Apple's removal of the headphone jack, the launch of the AirPods, and the prevalence of Alexa, the smart earbud category that Doppler helped create was expected to become a \$40 billion industry by 2020. Modern devices are computerised electroacoustic systems that transform environmental sound to make it audible, according to audiometrical and cognitive rules. Modern

devices also utilize sophisticated digital signal processing, aiming to improve speech intelligibility and comfort for the user. Such signal processing includes feedback management, wide dynamic range compression, directionality, frequency lowering, and noise reduction. 137ec388d4 == History == 137ec388d4

Cyclone Tracy communications out of Darwin were no longer operational. The antennas at the OTC Coastal Radio Service station (callsign VID) were destroyed during the storm 137ec388d4

Christian Gormsen was named CEO in the summer of 2016 and served until June 2023, when William Brownie replaced him. 137ec388d4 == History == 137ec388d4 Eargo was founded in 2010 by Florent Michel, his son Raphael Michel, and Daniel Shen. Florent was an ear, nose, and throat surgeon serving as the designer and inventor. Raphael served as the company's first CEO and Shen the company's chief science & clinical officer. 137ec388d4 == Etymology == 137ec388d4

Stapedectomy Significant contributions to modern stapedectomy techniques were then. 1956 on a 54-year-old housewife who could no longer hear even with a hearing aid 137ec388d4
