Gothic architecture The defining design element of Gothic architecture is the pointed arch. The style at the time was sometimes known as opus Francigenum (lit. was too heavy for the supporting structure; William Joy constructed scissor arches in the crossing to give the tower additional support. The use of the pointed arch in turn led to the development of the pointed rib vault and flying buttresses, combined with elaborate tracery and stained glass windows.

'French work'); the term Gothic was first applied contemptuously during the later Renaissance, by those ambitious to revive the architecture

of classical antiquity. It evolved from Romanesque architecture and was succeeded by Renaissance architecture. It originated in the Île-de-France and Picardy regions of northern France. A crossing tower Gothic architecture is an architectural style prevalent in Europe from the late 12th to the 16th century, during the High and Late Middle Ages, surviving into the 17th and 18th centuries in some areas 5f52233b55

The most common cause of foot pain is wearing ill fitting shoes. Women often wear tight shoes that are narrow and constrictive, and thus are most prone to foot problems. Tight shoes often cause overcrowding of toes and result in a variety of structural defects... 5f52233b55 Abnormal pronation occurs when a foot pronates when it should supinate, or overpronates during a normal pronation period of the gait cycle. Approximately four degrees of pronation and supination are necessary to enable the foot... 5f52233b55

Diseases of the foot This is because of the foot's distance from the central circulation, the heart and its constant exposure to pressures from the ground and the weight of the body. Flat feet generally do not cause Diseases of the foot generally are not limited, that is they are related to or manifest elsewhere in the body. essentially means that the arch inside the foot is flat. This very common painless disorder may occur at birth or after pregnancy. However, the foot is often the first place some of these diseases or a sign or symptom of others appear 5f52233b55

Pronation of the foot methods for measuring arch height and determining whether someone is "flat-footed" or "high-arched" are unreliable. He says, "For this reason, studies Pronation is a natural movement of the foot that occurs during foot landing while running or walking. Pronation is the first half of the stance phase, whereas supination starts the

propulsive phase as the heel begins to lift off the ground. Composed of three cardinal plane components: subtalar eversion, ankle dorsiflexion, and forefoot abduction, these three distinct motions of the foot occur simultaneously during the pronation phase. Pronation is a normal, desirable, and necessary component of the gait cycle 5f52233b55

Edward Kenworthy Carlisle was born in 1810 near Augusta, Georgia. He migrated with his mother, Susan Curry... 5f52233b55 The cause of plantar fasciitis is not clear. Risk factors include overuse, such as from long periods of standing, an increase in exercise, and obesity. It is associated with inward rolling of the foot, a tight calf muscle and Achilles tendon, and a sedentary lifestyle. Heel spurs may play a role; they are commonly present in people who have the condition. Plantar fasciitis is a disorder of the insertion site of the ligament on the bone characterized by micro tears, collagen breakdown, and

scarring. Inflammation plays either a lesser or no role. A review proposed that the disorder be renamed plantar fasciosis. Presentation of symptoms is generally the basis for diagnosis. Conditions with similar symptoms include osteoarthritis, ankylosing... 5f52233b55 == Structure == 5f52233b55 The normal biomechanics of the foot absorb and direct the occurring throughout the gait whereas the foot is flexible (pronation) and rigid (supination) during different phases of the gait cycle. As the foot is loaded, eversion of the subtalar joint, dorsiflexion of the ankle, and abduction of the forefoot occur. Pronation should not occur past the latter stages of midstance, as the normal foot should then supinate in preparation for toe-off. 5f52233b55 Roman architecture covers the period from the establishment of the Roman Republic in 509 BC to about the 4th century AD, after which it becomes reclassified as Late Antique or Byzantine architecture. Few substantial examples survive from

before about 100 BC, and most of the major survivals are from the later empire, after about 100 AD. Roman architectural style continued to influence building in the former empire for many centuries, and the style used in Western Europe beginning... 5f52233b55

Kenworthy Hall It, along with some of its surrounding ancillary structures, was declared a National Historic Landmark in 2004. It was built from 1858 to 1860 and is one of the best preserved examples of Richard Upjohn's distinctive asymmetrical Italian villa style. measuring 13 feet wide and 27 feet long. The building was designed and constructed for Edward Kenworthy Carlisle as his primary family residence and the centerpiece of his 440-acre (1. It is the only surviving residential example of Upjohn's Italian villa style that was especially designed to suit the Southern climate and the plantation lifestyle. 8 km2) estate. It has a massive four-story tower, windows of variable size and shape with

brownstone trim, and a distinctly Southern division of family and public spaces. Both halls employ large ornamental oak arches to visually Kenworthy Hall, also known as the Carlisle-Martin House, Carlisle Hall and Edward Kenworthy Carlisle House, is a plantation house located on the north side of Alabama Highway 14, two miles west of the Marion courthouse square. The cross hall is centered on the main oak staircase. The house and a purported ghost are featured as a short story in Kathryn Tucker Windham's 13 Alabama Ghosts and Jeffrey 5f52233b55

== History == 5f52233b55 The word "foot", in the sense of meaning the "terminal part of the leg of a vertebrate animal" comes from Old English fot, from Proto-Germanic *fot (which is also the source of Old Frisian fot, Old Saxon fot, Old Norse fotr, Danish fod, Swedish fot, Dutch voet, Old High German fuoz, German Fuß, Gothic fatus; all meaning "foot"), from Proto-Indo-European root *ped- "foot".

Pointe shoe These flat-bottomed predecessors of the modern pointe shoe were secured to the feet by ribbons and incorporated pleats under A pointe shoe (UK: , US:), also referred to as a ballet shoe, is a type of shoe worn by ballet dancers when performing pointe work. eliminated from standard ballet shoes. Pointe shoes were conceived in response to the desire for dancers to appear weightless and sylph-like and have evolved to enable dancers to dance en pointe (on the tips of their toes) for extended periods of time 5f52233b55

== Types == 5f52233b55 At the Abbey of Saint-Denis, near Paris, the choir was reconstructed between 1140 and 1144, drawing together for the first time the developing Gothic architectural features. In doing so, a new architectural style emerged that emphasized verticality and the effect created by the transmission of light through stained glass windows. 5f52233b55 The foot is a

complex structure with 26 bones, 33 joints, numerous muscles, nerves and different ligament types. Any part of the foot can be affected by diseases, with symptoms ranging from mild aches to more serious pain hindering one's ability to walk or bear weight. Most minor cases of foot pain can be responded to by home care treatments. However, when severe pain is present, medical attention is required as it is a disabling condition. If foot pain is not treated in time, it can lead to long-term disability and continuing damage to the foot. 5f52233b55

Ancient Roman architecture soon followed, with great pillars supporting broad arches and domes rather than dense lines of columns suspending flat architraves. The two styles are often considered one body of classical architecture. Roman architecture flourished in the Roman Republic and to an even greater extent under the Empire, when the great majority of surviving buildings were constructed. Large numbers remain in some form across

the former empire, sometimes complete and still in use today. It used new materials, particularly Roman concrete, and newer technologies such as the arch and the dome to make buildings that were typically strong and well engineered. The freedom of concrete Ancient Roman architecture adopted the external language of classical ancient Greek architecture for the purposes of the ancient Romans, but was different from Greek buildings, becoming a new architectural style 5f52233b55

The plural form feet is an instance of i-mutation. Secondary plural forms such as feets, feeten, and feetses are attested in modern English, especially in regional, non-standard usage. 5f52233b55 Common examples are found in Christian... 5f52233b55

Plantar fasciitis The pain typically comes on gradually. It affects both feet in about one-third of cases. factors for plantar fasciitis include excessive running, prolonged

standing on hard surfaces, high arches, leg length inequality, and flat feet. It results in pain in the heel and bottom of the foot that is usually most severe with the first steps of the day or following a period of rest. The tendency Plantar fasciitis or plantar heel pain is a disorder of the plantar fascia, which is the connective tissue that supports the arch of the foot. Pain is also frequently brought on by bending the foot and toes up towards the shin 5f52233b55

St Mary Magdalene's Church, Bolney
The church is well known for this large complement of bells and the regular bellringing St Mary Magdalene's Church is an Anglican church in the village of Bolney in Mid Sussex, one of seven local government districts in the English county of West Sussex. Many structural additions have been made over the centuries—including a tower built solely using the labour of villagers—and at the entrance to the churchyard is a "magnificent" 20th-century lychgate made of local

materials including Sussex Marble. The parish church, which is dedicated to Jesus' companion Mary Magdalene, serves a large rural parish centred on a village straddling the ancient London–Brighton road and apparently dates from about 1100, and an older origin has been suggested. near the top of the tower, lit by four two-light, flat-arched windows. The church is protected as a Grade I Listed building 5f52233b55

Bolney is on the ancient London–Brighton road about 11 miles (18 km) north of Brighton and 7 miles (11 km) southeast of the market town of Horsham. The main road now bypasses the village to the east. Neither a settlement nor a church was recorded in the Domesday survey of 1086. The parish was first recorded as Bolneya or Bolne in the 13th century, and was one of 12 in the Hundred of Buttinghill in the Rape of Lewes. Despite the absence of earlier written records... 5f52233b55 == Etymology == 5f52233b55

Sole (foot) bones underlying the sole form the arch of the foot. The arches might collapse later in life, resulting in flat feet. The intrinsic muscles in the sole In humans, the sole of the foot is anatomically referred to as the plantar aspect 5f52233b55

== Causes == 5f52233b55

Foot The muscles acting on the foot can be classified into The foot (pl. Excessive strain on the tendons and ligaments of the feet can result in fallen arches or flat feet. It is the terminal portion of a limb which bears weight and allows locomotion. : feet) is an anatomical structure found in many vertebrates. In many animals with feet, the foot is an organ at the terminal part of the leg made up of one or more segments or bones, generally including claws and/or nails 5f52233b55
