Many so-called mutilations are explainable as natural decomposition and normal predation. Multiple lines of evidence suggest some of the deaths might have been the result of an organized effort. Meanwhile, conspiracy theorists suggest cults, aliens, or cryptids (such as the chupacabra) were responsible. c03005d563

Beef has a high environmental impact, being a primary driver of deforestation with the highest greenhouse gas emissions of any agricultural product. Michael Greger was born on October 25, 1972, in Miami, Florida, United States. Greger has said that he was inspired to pursue a career in medicine at the age of nine after witnessing his grandmother's health improvement that she attributed to following dietary and lifestyle changes prescribed by American nutritionist Nathan Pritikin. He later graduated from the Cornell University School of Agriculture in 1995, where as a junior he wrote informally about the dangers of bovine spongiform encephalopathy on a website he published in 1994. In the same year, he was hired to work on mad cow issues for Farm Sanctuary, near Cornell, and became a vegan after touring a stockyard as part of his work with Farm Sanctuary. c03005d563

Bovine spongiform encephalopathy In 2002, the World Health Organization suggested it to be approximately four to five years. Time from onset of symptoms to death is generally weeks to months. Symptoms include abnormal behavior, trouble walking, and weight loss. Spread to humans is believed to result in variant Creutzfeldt-Jakob disease (vCJD). Symptoms include abnormal Bovine spongiform encephalopathy (BSE), commonly known as mad cow disease, is an incurable and always fatal neurodegenerative disease of cattle. == Etymology == c03005d563 BSE is a degenerative infection of the central nervous system in cattle. It is a fatal disease, similar to scrapie in sheep and goats, caused by a prion. A major epizootic affected the UK, and to a lesser extent a number of other countries, between 1986 and the 2000s, infecting more than 190,000 animals, not counting those that remained undiagnosed. c03005d563

BSE is thought to occur due to an infection by a misfolded protein, known as a prion. Cattle are believed to have been infected by being fed meat-and-bone meal that contained either the remains of cattle who spontaneously developed the disease or scrapie-infected sheep products. The United Kingdom was afflicted with an outbreak of BSE and vCJD in the 1980s and 1990s. The outbreak increased throughout the UK due to the practice of feeding meat-and-bone meal to young calves of dairy cows. Cases are suspected... c03005d563

Mabton's existence as a town is due to the Northern Pacific Railway, which arrived in the area around 1884 and built a water tower and section house on the site. Nothing else existed at Mabton until 1892 when Sam P. Flower built a store and a warehouse. He soon became the town's first postmaster. Mabton was named by Charlie Sandburg, a Swedish railworker, who proposed the name "Mabletown" for the wife (or daughter) of a railroad official who had spoken kind words to track workers during an inspection. By 1895, Mabton had several stores, a hotel, a railroad depot and a schoolhouse. The Mabton Townsite Company, formed by Sam P. Flower and J.A. Humphrey, made the first plat in 1902, and by 1904, it had more than a dozen businesses and a newspaper. The town of Mabton officially incorporated on November... c03005d563

Cattle feeding For pastured animals, grass is usually the forage that composes the majority of their diet. PR Watch. In turn, this grass-fed approach is known for producing meat with distinct flavor profiles. "Beef imports get go ahead". Mad Cow USA – Center for Media and Democracy. October There are different systems of feeding cattle in animal husbandry. The issue is complicated by the political interests and confusion between labels such as "free range", "organic", or "natural". The term "pasture-raised" can lead to confusion with the term "free range", which does not describe exactly what the animals eat. Cattle raised on a primarily foraged diet are termed grass-fed or pasture-raised; for example meat or milk may be called grass-fed beef or pasture-raised dairy. source] Scheffe, Roseanne (March 1, 2010). The debate is whether cattle should be raised on fodder primarily composed of grass or a concentrate. Cattle reared in feedlots are fed hay supplemented with grain, soy and other ingredients to increase the energy density of the feed. Toowoomba Chronicle c03005d563
