Kambo is usually used in a group setting, called a kambo circle or kambo ceremony. Some of the effects on humans include tachycardia, hypotension, nausea, as well as vomiting and sometimes bowel movements owing to smooth-muscle contractions. A meta-review of 50 studies in which 11 cases of acute intoxication were examined found that extreme cases have included psychosis (occasionally severe), SIADH, kidney damage (including acute renal failure), pancreas damage, liver damage including toxic hepatitis, dermatomyositis, esophageal rupture, and seizures, in some cases leading to death, although such incidents are limited in number and some evidence suggests precipitation by medical contraindications. de74583d08 == Uses == de74583d08 The liver and kidney are naturally capable of

Hydrotherapy lacks robust evidence supporting its efficacy beyond placebo effects. Systematic reviews of randomized controlled trials have consistently found no clear evidence of curative effects, citing methodological flaws and insufficient data. Overall, the scientific consensus indicates that hydrotherapy's benefits are not conclusively greater than those of placebo treatments.

A diagnostic fast is a prolonged fast, from 1-100 hours long (depending on age), conducted under observation, to facilitate the investigation of a health complication (usually hypoglycemia). Many people may also fast as part of a medical procedure or a check-up, such as preceding a colonoscopy or surgery, or before certain medical tests. Intermittent fasting is a technique sometimes used for weight loss or other health benefits that incorporates regular fasting into a person's dietary schedule. Fasting may also be part of a religious ritual, often associated with specific scheduled fast days, as determined by the religion, or be applied as a public demonstration for a given cause, in a practice known as a hunger strike.

Opposition to water fluoridation Opposition to the addition of fluoride to drinking water arises from political, ethical, economic, and health considerations. International and national Opposition to the addition of fluoride to drinking water arises from political, ethical, economic, and health considerations. Proponents see it as a question of public health policy and equate the issue to vaccination and food fortification, citing significant benefits to dental health and minimal risks. A small minority of scientists have challenged the medical consensus, variously claiming that water fluoridation has no or little cariostatic benefits, may cause serious health problems, is not effective enough to justify the costs, or is pharmacologically obsolete. In contrast, opponents view it as an infringement of individual rights, if not an outright violation of medical ethics, on the basis that individuals have no choice in the water that they drink, unless they drink more expensive bottled water. International and national agencies and dental associations across the world support the safety and effectiveness of water fluoridation de74583d08
