Which Alcohol Has The Lowest Calories

Long-term effects of alcohol The extent of these effects varies depending on several factors, including the quantity and frequency of alcohol intake, as well as individual genetic and lifestyle factors. Alcohol is recognized as a direct cause of several diseases, including cancer. The biological mechanisms include the damage caused by acetaldehyde, a toxic byproduct of alcohol metabolism, which can alter DNA, and the generation of oxidative stress. No level of alcohol consumption has been identified as completely safe in terms of cancer risk. The International Agency for Research on Cancer (IARC) classifies alcohol as a Group 1 carcinogen, meaning it is capable of causing cancer in humans. Research shows a causal link between alcohol consumption and at least seven types of cancer, including cancers of the oropharynx (mouth and throat), esophagus, liver, colorectum, and female breast. to thermogenesis, thus the approximate number of calories that can be utilized is between 5 and 6 calories per gram of alcohol. According to Cambridge The long-term effects of alcohol consumption on health are predominantly detrimental, with the severity and range of harms generally increasing with the cumulative
