DNA digital data storage encoding schemes include Huffman codes, comma codes, and alternating codes. To encode arbitrary data in DNA, the data is typically first converted into DNA digital data storage is the process of encoding and decoding binary data to and from synthesized strands of DNA

== Geography == While DNA as a storage medium has enormous potential because of its high storage density, its practical use is currently severely limited because of its high cost and very slow read and write times.

Other subspecies of *Equus ferus* may have existed and could have been the stock from which domesticated horses are descended. Przewalski's horse had reached the brink of extinction, but was reintroduced successfully into the wild. The tarpan became extinct in the 19th century, but is theorized to have been present on the steppes of Eurasia at the time of domestication. Since the extinction of the tarpan, attempts have been made to reconstruct its phenotype using domestic horses, resulting in horse breeds such as the Heck horse. However, the genetic makeup and foundation bloodstock of those... == Discharge modelling == Allamuchy CDP (with a 2010 Census population of 78) and Panther Valley (2010 population of 3,327) are census-designated places and unincorporated communities located within the township. Many methods for encoding data in DNA are possible. The optimal methods are those that make economical use of DNA and protect against errors. If the message DNA is intended to be stored for a long period of time, for example, 1,000 years, it is also helpful if the sequence is obviously artificial and the reading frame is easy to identify. 4dcde66ede In the Iñupiaq language, Qiqiqtaq (formally Q̄iqiq̄taq̄) means 'island'.
