It is owned and operated by the United Auburn Indian Community and designed by architect Edward Vance of JMA Architecture Studios, located in Las Vegas, Nevada d05e76ddc4

Synkinesis Facial retraining Synkinesis is a neurological symptom in which a voluntary muscle movement causes the simultaneous involuntary contraction of other muscles. Facial and extraocular muscles are affected most often; in rare

cases, a person's hands might perform mirror movements. massage). Treatments for synkinesis in general include facial retraining, biofeedback, mime therapy, and Botox and surgery, as a last resort. An example might be smiling inducing an involuntary contraction of the eye muscles, causing a person to squint when smiling d05e76ddc4

The origins of the sexual fetishization of the people of Asia are unclear. Male Dutch colonists fetishised Southeast Asian women in the Dutch East Indies, on the basis of the darker skin and hair colour of the Indigenous women. Similar accounts were reported in other colonized territories such as the British Raj, where it was common for English men to have Indian mistresses against a backdrop where Indian women were sexualised through what scholars describe as a typical colonial gaze and viewed as seductive, sensual and exotic. After World War II, Japanese women gained prominence in American beauty pageants, at a time when large numbers of Japanese war brides were entering the United States. d05e76ddc4 Management of ear pain depends on the cause. If there is a bacterial infection, antibiotics are sometimes recommended and over the counter pain medications can help control discomfort. Some causes of ear pain require a procedure or surgery. d05e76ddc4 == Etymology == d05e76ddc4 Scar tissue is composed of the same protein (collagen) as the tissue that it replaces, but the fiber composition of the protein is different; instead of a random basketweave formation of the collagen fibers found in normal tissue, in fibrosis the collagen cross-links and forms a pronounced alignment in a single direction. This collagen scar tissue alignment is usually of inferior functional quality to the normal collagen randomised alignment. For example, scars in the skin are less resistant to ultraviolet radiation, and sweat glands and hair follicles do not grow back within scar tissues. A myocardial infarction, commonly known as a heart attack, causes scar formation in... d05e76ddc4 Synkinesis is usually caused by dysfunction of a particular nerve. Potential causes include improper healing after nerve trauma or neurodegeneration, as occurs in Parkinson's disease. In congenital cases, mutations of genes involved in nerve growth, specifically axonal growth have been found. Rarely, it occurs as part of syndromes with neuroendocrine problems, such as Kallman syndrome. The prognosis is usually good with normal intelligence and lifespan. Treatment depends on the cause, but is largely conservative with facial retraining or mime therapy, if needed, while Botox and surgery are used as last resort. d05e76ddc4

Asian fetish The term usually refers to women specifically of East or Southeast Asian descent though it may also include those of South Asian descent. preferred to date within their own race. A 2008 American study on female facial attractiveness with majority White participants (27 men and 45 women; with An Asian fetish is a strong sexual or romantic preference for people of Asian descent or heritage d05e76ddc4

Periodontal abscess In contrast to a periapical abscess, periodontal abscesses are usually associated with a vital (living) tooth. e. If this does not work, incision and drainage is required A periodontal abscess (also termed lateral abscess, or parietal abscess) is a localized collection of pus (i. A periodontal abscess occurs alongside a tooth, and is different from the more common periapical abscess, which represents the spread of infection from a dead tooth (i. To reflect this, sometimes the term "lateral (periodontal) abscess" is used. which has undergone pulpal necrosis). can be encouraged by gentle irrigation and scaling of the pocket whilst massaging the soft tissues. e. Abscesses of the periodontium are acute bacterial infections classified primarily by location. an abscess) within the tissues of the periodontium. It is a type of dental abscess d05e76ddc4

Targets of Asian fetishization report a number of harms and psychological burdens as a result of being fetishized, such as anxiety and doubt about the motivations of those who display interest in them, and difficulty asserting their individuality when being reduced... d05e76ddc4 **The venom glands of snakes** are a modification of the parotid salivary glands. d05e76ddc4 **Most causes of ear pain** are non-life-threatening. Primary ear pain is more common than secondary ear pain, and it is often due to infection or injury. The conditions that cause secondary (referred) ear pain are broad and range from temporomandibular joint syndrome to inflammation of the throat. d05e76ddc4

Submandibular gland It is supplied particularly by the submental and sublingual arteries and is drained by the facial and lingual The paired submandibular glands (historically known as submaxillary glands) are major salivary glands located beneath the floor of the mouth. The average length of the normal adult human submandibular salivary gland is approximately 27 mm, while the average width is approximately 14. 3 mm. In adult humans, they each weigh about 15

grams and contribute some 60–67% of unstimulated saliva secretion; on stimulation, their contribution decreases in proportion as parotid gland secretion rises to 50%. branches of the facial and lingual arteries

Ear pain Tumors: the Ear pain, also known as earache or otalgia, is pain in the ear. Secondary ear pain is a type of referred pain, meaning that the source of the pain differs from the location where the pain is felt. visible vesicles within the ear canal and, when combined with facial paralysis due to facial nerve involvement, is called Ramsay Hunt syndrome. Primary ear pain is pain that originates from the ear

List of anatomy mnemonics Mnemonics serve as a systematic method for remembrance of functionally or systemically related items within regions of larger fields of study, such as those found in the study of specific areas of human anatomy, such as the bones in the hand, the inner ear, or the foot, or the elements comprising the human biliary system or arterial system. Radius Humerus Understand Listen Name A bone "Please Make Cookies" "Please Massage Chest" People Make Choices Phalanges Metacarpal bones Carpal bones (These This is a list of human anatomy mnemonics, categorized and alphabetized. The 275,000-square-foot (25,550 m²) facility offers a variety of gaming including slot machines, live poker and various other table games. The word parotid literally means "beside the ear". From Greek παρωτίς (stem παρωτιδ-) : (gland) behind the ear < παρά - pará : in front, and οὖς - ous (stem ὠτ-, ōt-) : ear. In many cases, humans subconsciously attribute positive characteristics, such as intelligence and honesty, to physically attractive people, a psychological phenomenon called the halo effect. Research done in the United States and United Kingdom found that objective measures of physical attractiveness and intelligence are positively correlated, and that the association between the two attributes is stronger among men than among women. Evolutionary psychologists have tried to answer why individuals who are more physically attractive should also, on average, be more intelligent, and have put forward the notion that both general intelligence and physical attractiveness may... In general, the reason for ear pain can be

discovered by taking a thorough history of all symptoms and performing a physical examination, without need for imaging tools like a CT scan. However, further testing may be needed if red flags are present like hearing loss, dizziness, ringing in the ear or unexpected weight loss. d05e76ddc4 == Types == d05e76ddc4 == Signs and symptoms == d05e76ddc4

Parotid gland Later, at around 10 weeks of prenatal development, these The parotid gland is a major salivary gland in many animals. Sometimes accessory parotid glands are found close to the main parotid glands. Each parotid is wrapped around the mandibular ramus, and secretes serous saliva through the parotid duct into the mouth, to facilitate mastication and swallowing and to begin the digestion of starches. In humans, the two parotid glands are present on either side of the mouth and in front of both ears. ears and branch to form solid cords with rounded terminal ends near the developing facial nerve. There are also two other types of salivary glands; they are submandibular and sublingual glands. They are the largest of the salivary glands d05e76ddc4

== Bones == d05e76ddc4 == History == d05e76ddc4 Thunder Valley Casino Resort is owned by the United Auburn Indian Community, a Native American tribe consisting of mostly Miwuk and Maidu Indians indigenous to the Sacramento Valley region. In the 1950s and '60s, the United States government terminated 41 California rancherias—mini-reservations, including that of the Miwok and Maidu Auburn band. As a way to lift themselves out of poverty, the members of the tribe decided to build a casino after Congress restored the tribe's federal status in 1994, allowing the tribe to acquire land under tribal sovereignty. d05e76ddc4

Scar reviewed reported favorable outcomes for scar massage, but that "while there may be benefits to scar massage in reducing pain, increasing movement and improving A scar (or scar tissue) is an area of fibrous tissue that replaces normal skin following an injury. An exception is animals with complete regeneration, which regrow tissue without scar formation. Thus, scarring is a natural part of the healing process. With the exception of very minor lesions, every wound (for example, after an accident, disease, or surgery) results in some degree of scarring. Scars result from the biological process of wound repair in the skin, as well as in other organs and tissues of the body d05e76ddc4

The main symptom is pain, which often suddenly appears, and is made worse by biting on the involved tooth, which may feel raised and prominent in the bite. The tooth may be mobile, and the lesion may contribute to destruction of the periodontal ligament and alveolar bone. The pain is deep and throbbing. The oral mucosa covering an early periodontal abscess appears erythematous (red), swollen and painful to touch. The surface may be shiny due to stretching of the mucosa over the abscess... d05e76ddc4
