Early Germanic calendars February being the shortest of months. The calendars were an element of early Germanic culture.

According to Bede, the month aligning with Julian October was named Winterfylleth "because winter began on the first full moon". The early Germanic calendars were the regional calendars used among the early Germanic peoples before they adopted the Julian calendar in the Early Middle Ages. 3526052488

The lunisolar calendar is reflected in the Proto-Germanic term *mēnōþs "month" (Old English mōnaþ, Old Saxon mǎnuth, Old Norse mánaðr, and Old High German mǎnod, Gothic mēnōþs), being a derivation of the word for moon. The Germanic peoples had names for the months that varied by region and dialect, but they were later replaced with local adaptations of the Julian month names. Records of Old English and Old High German month names date to the 8th and 9th centuries, respectively. Old Norse month names are attested from the 13th century. As with most pre-modern calendars, the reckoning used in early Germanic culture was likely lunisolar. As an example, the Runic calendar developed in medieval Sweden was lunisolar, fixing the beginning of the year at the first full moon after winter solstice. 3526052488
