Fly fishing Such lures are typically made by tying various filamentous materials (feathers, hairs/fur, synthetic fibers or yarns) to the shank of a small fish hook, creating tufts/bundles of protruding bristles that imitate setae, wing venations and other appendages aesthetically. Because the sectional density of a fly lure is insufficient to overcome air resistance (as its mass is very small, but its sectional and wetted area are often quite significant due to the fluffy exterior), it cannot be cast far using conventional gears and techniques. It is also very common for fly anglers to wear waders, carry a hand net, and stand in the water when fishing. with the invention of the multiplying winch, although he was certainly the first to advertise its sale. Casting of fly lures is done using specialized tackles, which typically involve the use of heavy-ended fly lines, and the casting techniques are significantly different from other forms of angling. Early multiplying reels were wide and had a small Fly fishing is an angling technique that uses an ultra-lightweight fishing lure called an artificial fly, which typically mimics small invertebrates such as flying and aquatic insects to attract and catch insectivorous fish 6b27d6ec84
