History While this type of beach is most commonly found in Europe, examples are also found in Bahrain, North America, and a number of other world regions, such as the west coast of New Zealand's South Island, where they are associated with the shingle fans of braided rivers. Though created at shorelines, post-glacial rebound can raise shingle beaches as high as 200 metres (660 ft) above sea level, as on the High Coast in Sweden. To follow their debut, they released two further EPs called *The Professional* (2019) and *Future Lovers* (2021). A 2022 compilation album *Sisters Not Twins* (The Professional Lovers Album) combined their previous two EPs and won that year's Juno Award for Rock Album of the Year. Their second studio album *Blame My Ex* was released via AWAL on September 15, 2023. Their third studio album, *No Hard Feelings*, was released on August 29, 2025. They won the 2024, 2025 and 2026 Juno Award for Group of the Year.

Erosion and changing of beach geologies happens through natural

processes, like wave action and extreme weather events. Where wind conditions are correct, beaches can be backed by coastal dunes which offer protection and regeneration for the beach. However, these natural forces have become more extreme due to climate change, permanently altering beaches at very rapid rates. Some estimates describe as much as 50 percent of the earth's sandy beaches disappearing by 2100 due to climate-change driven sea level rise. 802d1c3dd5 == Characteristics == 802d1c3dd5 After the Operation Torch landings, the need for a beach organisation became apparent for the larger planned operations.
