Southern Ocean The Southern Ocean, also known as the Antarctic Ocean, comprises the southernmost waters of the World Ocean, generally taken to be south of 60° S latitude The Southern Ocean, also known as the Antarctic Ocean, comprises the southernmost waters of the World Ocean, generally taken to be south of 60° S latitude and encircling Antarctica. With a size of 21,960,000 km² (8,480,000 mi²), it is the second-smallest of the five principal oceanic divisions, smaller than the Pacific, Atlantic and Indian oceans, and larger than the Arctic Ocean a417aa18a5

The maximum depth of the Southern Ocean, using the definition that it lies south of 60th parallel, was surveyed by the Five Deeps Expedition in early February 2019. The expedition's multibeam sonar team identified the deepest point at 60° 28' 46"S, 025° 32' 32"W, with a depth of 7,434 metres (24,390 ft). The expedition leader and chief

submersible pilot, Victor Vescovo, has proposed naming this deepest point the "Factorian Deep", based on the name of the crewed submersible DSV Limiting Factor, in which he successfully visited the bottom for the first time on February 3, 2019. a417aa18a5 Ocean scientists split the ocean into vertical and horizontal zones based on physical and biological conditions. Horizontally the ocean covers the oceanic crust, which it shapes. Where the ocean meets dry land it covers relatively shallow continental shelves, which are part of Earth's continental crust. Ocean world The study of extraterrestrial oceans is referred to as planetary oceanography. The term ocean world is also used sometimes for astronomical bodies with an ocean composed of a different fluid or thalassogen, such as lava (the case of Io), ammonia (in a eutectic mixture with water, as is likely the case of Titan's inner ocean) or hydrocarbons (like on Titan's surface, which could be the most abundant kind of exosea). ocean world, ocean planet, water world, or water planet is a type of planet or moon that contains a substantial amount of water in the form of oceans An ocean world, ocean planet, water world, or water planet is a type of planet or moon that contains a substantial amount of water in the form of oceans, as part of its hydrosphere, either beneath the surface, as subsurface oceans, or on the surface, potentially submerging all dry land

Each of the entries has a sailing crew who race day and night for more than 20 days at a time on some of the legs. Since the 2008–2009 race there has also been a dedicated media crew member called the On

In the 2017–2018 race, the number of crew ranged between 7 and 10 (plus the OBR) depending on the gender ratio, with the rules providing an incentive to having women sailors on board. a417aa18a5 Their 2024 song "Tangerine" placed at number 15 in the 2024 triple j Hottest 100. a417aa18a5 Earth is the only astronomical object known to presently have bodies of liquid water on its surface, although subsurface oceans are suspected to exist on Jupiter's moons Europa and Ganymede and Saturn's moons Enceladus and Titan. Several exoplanets have been found with the right conditions to support liquid water. There are also considerable amounts of subsurface water found on Earth, mostly in the form of aquifers. The Arctic Ocean is surrounded by Eurasia and North America, and the borders follow topographic features: the

Bering Strait on the Pacific side and the Greenland Scotland Ridge on the Atlantic side. It is mostly covered by sea ice throughout the year and almost completely in winter. The Arctic Ocean's surface temperature and salinity vary seasonally as the ice cover melts and freezes; its salinity is the lowest on average of the five major oceans, due to low evaporation, heavy fresh water inflow from rivers and streams, and limited connection... a417aa18a5 The Earth's waters are said to be "under threat as never before", with pollution, overfishing, and the effects of climate change severely damaging the health of our oceans. For instance as oceans are warming and becoming more acidic, biodiversity is becoming reduced and changing currents will cause more frequent storms and droughts. Every year around 8 million metric tons of plastic waste leak into the ocean and make it into the circular ocean currents. This causes contamination of sediments at the sea-bottom and causes plastic waste to be embedded in the aquatic food chain. It could lead to oceans containing more plastics than fish by 2050 if nothing is done. Key habitats such as coral reefs are at risk and noise pollution are a threat to whales, dolphins, and other

species. Furthermore almost 90 percent of fish stocks are overfished or fully exploited which cost more than \$80 billion a year in lost revenues. a417aa18a5

Arctic Ocean It is also seen as the northernmost part of the all-encompassing world ocean. It has also been described as being approximately equivalent to an estuary of the Atlantic Ocean. It spans an area of approximately 14,060,000 km² (5,430,000 sq mi) and is the coldest of the world's oceans. The International Hydrographic Organization (IHO) recognizes it as an ocean, although some oceanographers call it the Arctic Mediterranean Sea or North Polar Sea. Norse were the first known humans to cross the Atlantic, it was the expedition of Christopher Columbus in 1492 that proved to be the most consequential. Columbus's expedition ushered in an age of exploration and colonization of the Americas by European powers, most notably Portugal, Spain, France, and the United Kingdom. From the 16th to the 19th centuries, the Atlantic Ocean was the center of both an eponymous slave trade and the Columbian exchange while occasionally hosting naval battles.
