

Sudden Appearance Many Cherry Angiomas

At the onset, there are usually no symptoms, but if they develop, symptoms generally begin around middle age. In severe cases, it can result in coronary artery disease, stroke, peripheral artery disease, or kidney disorders, depending on the body part(s) in which the affected arteries are located. 4f15cbf7d0 22:36, 30 Sep 2003 Infrogmation deleted "2110s" ("...2117: Satoshi Tajiri is proclaimed the smartest man in the world." How nice. Do resubmit the article after that happens..) 4f15cbf7d0 == Signs and symptoms... == 4f15cbf7d0 11 β -Hydroxyprogesterone 4f15cbf7d0 I'm not sure whether this is the right place to ask. According to the block log, the IP range 2401:4900::/32 appears to have been blocked from Wikipedia, with account creation also blocked. According to the WHOIS info and APNIC info, this range is allocated to Airtel India, which is India's 2nd largest mobile ISP with more than 300 million subscribers. 4f15cbf7d0 This section was originally posted by a fairly new editor at Wikipedia:Village pump (technical), but that is clearly not the best place for it, so I am copying it here. 4f15cbf7d0 == Signs and symptoms == 4f15cbf7d0

Abdominal aortic aneurysm Abdominal pain, shock, and a pulsatile mass Abdominal aortic aneurysm (AAA) is a localized enlargement of the abdominal aorta such that the diameter is greater than 3 cm (1. 2 in) or more than 50% larger than normal. Large aneurysms can sometimes be felt by pushing on the abdomen. Rupture may result in pain in the abdomen or back, low blood pressure, or loss of consciousness, and often results in death. An AAA usually causes no symptoms, except during rupture. Occasionally, abdominal, back, or leg pain may occur. older than 60 who experiences collapse, unexplained low blood pressure, or sudden-onset back or abdominal pain 4f15cbf7d0

1,1,1,2-Tetrafluoroethane 4f15cbf7d0 Chylothorax is a rare but serious condition, as it signals leakage of the thoracic duct or one of its tributaries. There are many treatments, both surgical and conservative. About 2–3% of all fluid collections surrounding the lungs (pleural effusions) are chylothoraces. It is important to distinguish a chylothorax from a pseudochylothorax (a pleural effusion that happens to be high in cholesterol), which has a similar appearance visually but is caused by more chronic inflammatory processes and requires a different treatment. 4f15cbf7d0 == Articles == 4f15cbf7d0 100,000 Genomes Project 4f15cbf7d0 22:22, 30 Sep 2003 Angela deleted "List of famous Lithuanians" (redirect to deleted page) 4f15cbf7d0 23:23, 30 Sep 2003 Evercat deleted "Two-Bigg M.C." Treatment is typically with anticoagulants (medications that suppress blood clotting) such as low molecular weight heparin. Rarely, thrombolysis (enzymatic destruction of the blood clot) or mechanical thrombectomy is used, although evidence for this therapy is limited. The disease may be complicated by raised intracranial pressure, which may warrant surgical intervention such as the placement of a shunt. 4f15cbf7d0 17 β -Dihydroequilenin 4f15cbf7d0 It may lead to nosebleeds, acute and chronic digestive tract bleeding, and various problems due to the involvement of other organs. Treatment focuses on reducing bleeding from telangiectasias, and sometimes surgery or other targeted interventions to remove arteriovenous malformations in organs. Chronic bleeding often requires iron supplements, iron infusions and sometimes blood transfusions. HHT is transmitted in an autosomal dominant fashion, and occurs in one in 5,000–8,000 people in North America. 4f15cbf7d0 (von Zumbusch) acute generalized pustular psoriasis 4f15cbf7d0 16 α -Hydroxyestrone 4f15cbf7d0 1852–60 cholera pandemic 4f15cbf7d0 AAAs occur most commonly in men, those over 50, and those with a family history of the disease. Additional risk factors include smoking, high blood pressure, and other heart or blood vessel diseases. Genetic conditions with an increased risk include Marfan syndrome and Ehlers–Danlos syndrome. AAAs are the most common form of aortic aneurysm. About 85% occur below the kidneys, with the rest either at the level of or above the kidneys. In the United States, screening with abdominal ultrasound is recommended for males between 65 and 75 years of age with a history of smoking. In the United Kingdom and Sweden, screening all men over 65 is recommended. Once an aneurysm is found, further ultrasounds are typically done regularly... 4f15cbf7d0 A huge /32 range has been blocked in this case. According to IPv6_address#General_allocation, 4f15cbf7d0

Chylothorax The lymphatic vessels of the digestive system normally return lipids absorbed from the small bowel via the thoracic duct, which ascends behind the esophagus to drain into the left brachiocephalic vein. If normal thoracic duct drainage is disrupted, either due to obstruction or rupture, chyle can leak and accumulate within the negative-pressured pleural space. ability to fight infections. In people on a normal diet, this fluid collection can sometimes be identified by its turbid, milky white appearance, since chyle contains emulsified triglycerides. Rapidly accumulating chylothoraces can cause a sudden drop in blood volume, leading to low blood pressure. There are three main A chylothorax is an abnormal accumulation of chyle, a type of lipid-rich lymph, in the pleural space surrounding the lung 4f15cbf7d0

The heart arteries are difficult to track because they are small (from about 5 mm down to microscopic), they are hidden deep within the chest and they never stop moving. Additionally, all mass-applied clinical strategies focus on both minimal cost and the overall safety of the procedure. Therefore, existing diagnostic strategies for detecting atheroma and tracking response to treatment have been extremely limited. The methods most commonly relied upon, patient symptoms and cardiac stress testing... 4f15cbf7d0

Pulmonary embolism Symptoms of a PE may include shortness of breath, chest pain particularly upon breathing in, and coughing up blood. Signs of a PE include low blood oxygen levels, rapid breathing, rapid heart rate, and sometimes a mild fever. older. Symptoms of pulmonary embolism are typically sudden in onset and may include one or many of the following: dyspnea (shortness of breath), tachypnea Pulmonary embolism (PE) is a blockage of an artery in the lungs by a substance that has moved from elsewhere in the body through the bloodstream (embolism). Symptoms of a blood clot in

the leg may also be present, such as a red, warm, swollen, and painful leg. Severe cases can lead to passing out, abnormally low blood pressure, obstructive shock, and sudden death 4f15cbf7d0

1% rule (aviation medicine) 4f15cbf7d0 1881-96 cholera... 4f15cbf7d0 10/90 gap 4f15cbf7d0 1863-75 cholera pandemic 4f15cbf7d0 17 α -Dihydroequilenin 4f15cbf7d0 17 α -Methylprogesterone 4f15cbf7d0 PE usually results from a blood clot in the leg that travels to the lung. The risk of blood clots is increased by advanced age, cancer, prolonged bed rest and immobilization, smoking, stroke, long-haul travel over 4 hours, certain genetic conditions, estrogen-based medication, pregnancy, obesity, trauma or bone fracture, and after some types of surgery. A small proportion of cases are due to the embolization of air, fat, or amniotic fluid. Diagnosis is based on signs and symptoms in combination with test results. If the risk is low, a blood test known as a D-dimer may rule out the condition. Otherwise... 4f15cbf7d0 11 α -Hydroxyprogesterone 4f15cbf7d0 1788 Doctors' riot 4f15cbf7d0
