== Summary == 7312c4e68a The collection was found in 1803 in the Benedictine monastery of Benediktbeuern, Bavaria, and is now housed in the Bavarian State Library in Munich. It is considered to be the most important collection of Goliard and vagabond songs, along with the Carmina Cantabrigiensia. 7312c4e68a The Codex is considered by scholars to be the most important of the three copies, although there is debate as to how much weight should be given to some of the detail it provides. Over twelve pages, the Codex describes how Verrazzano sailed due west from Madeira in December 1523, and in little more than a month had arrived at North Carolina. From there they journeyed south, towards Florida. This direction was not without danger, as Florida represented the northerly point of the Spanish... 7312c4e68a

They were written by students and clergy when Latin was the lingua franca throughout Italy and western Europe for travelling scholars, universities, and theologians. Most of the poems and songs appear to be the work of Goliards, clergy (mostly students) who satirized the Catholic Church. The collection preserves the works of a number of poets, including Peter of Blois, Walter of Châtillon and an anonymous poet referred to as the Archpoet. 7312c4e68a == Development == 7312c4e68a Verrazzano was an Italian who lived in France, and he undertook his voyage in Francis' service. Schmeller attempted to organize the collection Carmina Burana (, Latin for "Songs from Benediktbeuern" [Buria in Latin]) is a manuscript of 254 poems and dramatic texts mostly from the 11th or 12th century, although some are from the 13th century. 7312c4e68a The Classic Maya in particular developed some of the most accurate pre-telescope astronomy in the world, aided by their fully developed writing system and their positional numeral system, both of which are fully indigenous to Mesoamerica. The Classic Maya understood many astronomical phenomena: for example, their estimate of the length of the synodic month was more accurate than Ptolemy's, and their calculation of the length of the tropical solar year was more accurate than that of the Spanish when the latter first arrived. One of the purposes that Maya priest-astronomers observed the celestial movement is to discover the pattern that supports the agricultural schedule. Many temples from the Maya architecture have features oriented to celestial events.

Decades of neglect and poor storage led to the degradation of much of the manuscript, leading to the loss of a few portions of the text. After undergoing extensive restoration and preservation, an English translation of the surviving text was first published in early 2006 by the National Geographic Society. 7312c4e68a On 26 March 429, Emperor Theodosius II announced to the Senate of Constantinople his intention to form a committee to codify all of the laws (leges, singular lex) from the reign of Constantine up to Theodosius II and Valentinian III. The laws in the code span from 311 to 438, so by 438 the "volume of imperial law had become unmanageable". Twenty-two scholars, working in two teams, worked for nine years starting in 429 to assemble what was to become the Theodosian Code. The chief overseer of the work was Antiochus Chuzon, a lawyer and a prefect and consul

from Antioch. 7312c4e68a
