As it is worshiped by the indigenous natives as the guardian of their underworld, they believe that it is, in fact, a demon and hopes to acquire it for worship. The cult hires ex-CIA agent Warren Crowley to steal the snake... b7d33eef16

Spiders of Australia its relatives in the family Hexathelidae, and the redback spider, whose bites can be extremely painful and have historically been linked with deaths in Australia has a number of highly venomous spiders, including the Sydney funnel-web spider, its relatives in the family Hexathelidae, and the redback spider, whose bites can be extremely painful and have historically been linked with deaths in medical records. There are sensationalised news reports regarding Australian spiders that fail to cite evidence. A Field Guide to Spiders of Australia published by CSIRO Publishing in 2017 featuring around 836 species illustrated with photographs of live animals, around 381 genera and 78 families, introduced significant updates to taxonomy from Ramirez, Wheeler and Dmitrov. No deaths caused by spider bites in Australia have been substantiated by a coronial inquest since 1979. Most Australian spiders do not have venom that is considered to be dangerously toxic

Anatomically, spiders (as with all arachnids) differ from other arthropods in that the usual body segments are fused into two tagmata, the cephalothorax or prosoma, and the opisthosoma, or abdomen, and joined by a small, cylindrical pedicel. However, as there is currently neither paleontological nor embryological evidence that spiders ever had a separate thorax-like division, there exists an argument against the validity of the term cephalothorax, which means fused cephalon (head) and the thorax. Similarly, arguments can be formed against the use of...

Pyoderma gangrenosum Pyoderma gangrenosum is not infectious. Elston DM Pyoderma gangrenosum is a rare, inflammatory skin disease where painful pustules or nodules become ulcers that progressively grow.

Superficial granulomatous pyoderma Brown recluse spider bite Buruli ulcer Jackson JM, Callen JP (April 23, 2012). infliximab; or plasmapheresis

== Plot == Early work on Australian spiders In addition to aggression, the virus can induce hydrophobia ("fear of water")—wherein attempts to drink water or swallow cause painful spasms of the muscles in the throat or larynx—and an increase in saliva production. This aids the likelihood of transmission, as the virus multiplies and accumulates in the salivary glands and is transmitted primarily through biting. The accumulation of saliva can sometimes create a "foaming at the mouth" effect, which is commonly associated with rabies in animals in the public perception and in popular culture; however, rabies does not always present as such, and may be carried without typical symptoms being displayed.

Puffadder shyshark Typically reaching 60 cm (24 in) in length, the puffadder shyshark has a slender, flattened body and head. It is strikingly patterned with a series of dark-edged, bright orange "saddles" and numerous small white spots over its back. The Natal shyshark (H. cartilage, which allows a more even distribution of teeth and may increase bite strength. The five pairs of gill slits are positioned somewhat on the upper The puffadder shyshark (*Haploblepharus edwardsii*), also known as the Happy Eddie, is a species of shark belonging to the family Pentanchidae, the deepwater catsharks. This common shark is found on or near the bottom in sandy or rocky habitats, from the intertidal zone to a depth of 130 m (430 ft). This species is endemic to the temperate waters off the coast of South Africa. *kistnasamyi*), formally described in 2006, was once considered to be an alternate form of the puffadder shyshark

When threatened, the puffadder shyshark (and other members of its genus) curls into a circle with its tail covering its eyes, giving rise to the local names "shyshark" and "doughnut". It is a predator that feeds mainly on crustaceans, polychaete worms, and small bony fishes. This shark is oviparous and females deposit egg capsules singly or in pairs onto underwater structures. Harmless to humans, the puffadder shyshark is usually discarded by commercial... Early life

Spasms (film) Kerrie Keane. It is based on the 1979 novel Death Bite by Michael Maryk and Brent Monahan. It is based on the 1979 novel Death Bite by Michael Maryk and Brent Monahan Reclusive millionaire philanthropist Jason Kincaid lost his Spasms is a 1983 Canadian horror

Redback spider 12-0. 205. "Route of administration of redback spider bite antivenom: Determining clinician The redback spider (*Latrodectus hasselti*), also known as the Australian black widow, is a species of highly venomous spider believed to originate in Australia, but which is now found in Southeast Asia, Japan and New Zealand. White 2013, p. 16 in) long. PMID 18400776. It is a member of the cosmopolitan genus *Latrodectus*, the widow spiders. The adult female is easily recognised by her spherical black body with a prominent red stripe on the upper side of her abdomen and an hourglass-shaped red/orange streak on the underside. It has also been found in packing crates in the United States with colonies elsewhere outside Australia. 4 in), while the male is much smaller, being only 3-4 mm (0. Brown, Simon A. (2007). ; Isbister, Geoffrey K. Females usually have a body length of about 10 millimetres (0 b7d33eef16

The katipō is mainly found living in sand dunes close to the seashore. It is found throughout most of coastal New Zealand except the far south and the West Coast. It feeds mainly on ground-dwelling insects, caught in an irregular tangled web spun among... b7d33eef16

Spider "An infestation of 2,055 brown recluse spiders (Araneae: Sicariidae) and no envenomations in a Kansas home: implications for bite diagnoses in nonendemic Spiders (order Araneae) are air-breathing arthropods that have eight limbs, chelicerae with fangs generally able to inject venom, and spinnerets that extrude silk. However, there has been debate among scientists about how families should be classified, with over 20 different classifications proposed since 1900. Spiders are found worldwide on every continent except Antarctica, and have become established in nearly every land habitat. They are the largest order of arachnids and rank seventh in total species diversity among all orders of organisms. As of January 2026, 53,680 spider species in 139 families have been recorded by taxonomists b7d33eef16

Reclusive millionaire philanthropist Jason Kincaid lost his brother to a massive taipan serpent during a hunting trip in Micronesia. The snake also bit him, but rather than dying from the venom he survived and seemingly developed a telepathic link with the creature, caused by the venom mutating the brain cells responsible for extrasensory perception. Haunted by visions of the snake's continued killings, Kincaid pays to have a poacher capture it and deliver it to his mansion outside San Diego. He hires psychiatrist and ESP researcher Tom Brazilian in the hopes that he

can help him rid of the unwanted psychic link once and for all. In exchange, Kincaid offers to underwrite all of Brasilian's on-going research. b7d33eef16 Estimates put the total number of Australian spider species at about 10,000. Only around 3,600 have been described. Little information is known about many undiscovered species. New species are found each year. b7d33eef16

Tod Browning Some film writers have referred to Browning as "the Edgar Allan Poe of cinema. By that time Browning had Tod Browning (born Charles Albert Browning Jr. ". Browning's wife Alice died in 1944 from complications from pneumonia, leaving him a recluse at his Malibu Beach retreat. He directed a number of films of various genres between 1915 and 1939, but was primarily known for horror films. ; July 12, 1880 – October 6, 1962) was an American film director, film actor, screenwriter, vaudeville performer, and carnival sideshow and circus entertainer. California b7d33eef16

Treatments may include corticosteroids, ciclosporin, infliximab, or canakinumab. b7d33eef16 They are predated, typically in areas of large forestry, by many organisms that are visually acute such as various birds, the American toad (*Anaxyrus americanus*), and other large organisms. Similarly to other species, these spiders do not actually produce webs, but depend on their other acute senses, such as vision, to still exhibit elements of exploitative competition. b7d33eef16

Rabies in animals The third stage is the paralytic or "dumb" stage and is caused by damage to motor neurons In animals, rabies is a viral zoonotic neuro-invasive disease which causes inflammation in the brain and is usually fatal. hyperreactive to external stimuli and bite at anything near. The brains of animals with rabies deteriorate. As a result, they tend to behave bizarrely and often aggressively, increasing the chances that they will bite another organism and spread the disease. In the laboratory it has been found that birds can be infected, as well as their cell cultures. Rabies, caused by the rabies virus, primarily infects mammals b7d33eef16

Schizocosa ocreata The S. The Schizocosa ocreata is a spider that is most commonly known as the "brush-legged wolf spider" because of the distinct dark-colored fur-like coverings around the front legs of males. significant bites in the United States are the black widow and the brown recluse. National Schizocosa ocreata is a species of wolf spider in the family Lycosidae that is found in North America. ocreata are commonly found in North American states, usually in the middle and eastern United States. Allergic reactions may still occur or develop from any spider bites

Katipō 39 in) in length; the male is 4–5 millimetres (0. The female is 8–10 millimetres (0. These two forms were previously thought to be separate species. its bite being capable of producing the toxic syndrome latrodectism; symptoms include extreme pain and, potentially, hypertension or seizure. 16–0. It is one of many species in the genus Latrodectus and is most closely related to the Australian redback (L. In the South Island and the lower half of the North Island, the female has a distinct red stripe bordered in white on its abdomen; in more northern populations this stripe is absent, pale, yellow, or replaced with cream-coloured blotches. 31–0. It is venomous to humans, its bite being capable of producing the toxic syndrome latrodectism; symptoms include extreme pain and, potentially, hypertension or seizure. hasseltii). Bites are Katipō (pronounced kah-tih-PAW or KAH-tə-poh; Latrodectus katipo) is a species of cobweb spider found only in New Zealand. Bites are rare and antivenom is available in some hospitals. The male is white with black stripes and red hourglass-shaped markings. 20 in) b7d33eef16

Some interesting aspects of the *S. ocreata* are the female and male dynamics during mating and post-copulation. Females will frequently aggressively try to kill the males after mating and cause the males to use their venom as a mechanism of defense. Effects of early juvenile infection on the immunity of these spiders as adults are also currently being studied. b7d33eef16 Mainly nocturnal, the female redback lives in an untidy web in a warm sheltered location, commonly near or inside human residences. It preys on insects, spiders and small vertebrates that become ensnared in its web. It kills its prey by injecting a complex venom through its two fangs when it bites, before wrapping them in silk and sucking out the liquefied insides. Often, it first squirts its victim with what resembles 'superglue' from its spinnerets, immobilising the... b7d33eef16 Browning's career spanned the silent and sound film eras. He is known as the director of *Dracula* (1931), *Freaks* (1932), and his silent film collaborations with Lon Chaney and Priscilla Dean. b7d33eef16 The disease was identified in 1908. It affects approximately 1 person in 100,000 in the population. Though it can affect people of any age, it mostly affects people in their 40s and 50s. b7d33eef16
