== Pharmacology == 19e7d2ff85 The Epoch Times opposes the Chinese Communist Party, promotes far-right politicians and movements in Europe, and has supported President Donald Trump in the U.S. A 2019 report by NBC News showed it to be the second-largest funder of pro-Trump Facebook advertising after the Trump campaign itself. The Epoch Times frequently runs stories promoting other Falun Gong-affiliated groups, such as the performing arts company Shen Yun. The Epoch Media Group's news sites and YouTube channels have promoted conspiracy theories including QAnon, the Great Replacement, anti-vaccine misinformation, false claims of fraud in the 2020 United States presidential election, and climate change denial. In June 2024, the group's chief financial officer, Bill Guan, was indicted for money laundering....

19e7d2ff85 25B-NBOMe was first described in the scientific literature by Ralf Heim and colleagues at the Free University of Berlin by 1999. After 25I-NBOMe and along with 25C-NBOMe, 25B-NBOMe is one of the most widely used 25-NB psychedelics.

Methiopropamine Originally reported in 1942, the molecule consists of a thiophene group with an alkyl amine substituent at the 2-position. Methiopropamine has the potential for significant acute toxicity with cardiovascular, gastrointestinal, and psychotic symptoms. inhibitor. It appeared for public sale in the United Kingdom in December 2010 as a "research chemical" or "legal high", recently branded as Blow. For N-alkyl Methiopropamine (MPA), also known as N-methylthiopropamine, is an organic compound structurally related to methamphetamine. It has limited popularity as a recreational stimulant 19e7d2ff85

All species of the genus are poisonous to humans. *C. maculatum*, also known as hemlock, is infamous for being highly poisonous. Hemlock is native to temperate regions of Europe, North Africa and Western Asia. The species *C. chaerophylloides*, *C. fontanum*, and *C. sphaerocarpum* are all native to southern Africa. 19e7d2ff85

25C-NBOMe The long-term toxic effects of the drug have not been researched. It acts as a potent agonist of the 5-HT_{2A} receptor, and has been studied in its 11C

radiolabelled form as a potential ligand for mapping the distribution of 5-HT_{2A} receptors in the brain, using positron emission tomography (PET). autonomic dysfunction remains prevalent with NBOMe compounds, with most individuals experiencing sympathomimetic toxicity such as vasoconstriction, hypertension 25C-NBOMe, also known as NBOMe-2C-C, 2C-C-NBOMe, or Cimbi-82, is a psychedelic drug and derivative of the psychedelic phenethylamine 2C-C. 25C-NBOMe was first described in the scientific literature by 2010. Multiple deaths have occurred from usage of 25C-NBOMe due to the ease of accidental overdose 19e7d2ff85

25B-NBOMe The drug is taken sublingually, buccally, or intranasally. autonomic dysfunction remains prevalent with NBOMe compounds, with most individuals experiencing sympathomimetic toxicity such as vasoconstriction, hypertension 25B-NBOMe, also known as NBOMe-2C-B, Cimbi-36, or as N-(2-methoxybenzyl)-4-bromo-2,5-dimethoxyphenethylamine, is a psychedelic drug of the phenethylamine, 2C, and 25-NB (NBOMe) families. It is the N-(2-methoxybenzyl) derivative of 2C-B 19e7d2ff85

== Description == 19e7d2ff85 The dose range of 25D-NBOMe has been given as 0.3 to 1.2 mg or more sublingually, with a typical dose estimate of 1.0 mg. 19e7d2ff85 ==

Use and effects == 19e7d2ff85 An intrinsic antidepressant effect of chlorprothixene has been discussed, but not proven. Likewise, it is unclear if chlorprothixene has genuine (intrinsic) analgesic effects. However, chlorprothixene can be used as co-medication in severe chronic pain. Also, like most antipsychotics, chlorprothixene has antiemetic effects. 19e7d2ff85

Methoxetamine has been associated with hospitalizations from high and/or combined consumption in the US and UK. Acute reversible cerebellar toxicity has been documented Methoxetamine (MXE) is a dissociative hallucinogen that has been sold as a designer drug. It differs from many dissociatives such as ketamine and phencyclidine (PCP) that were developed as pharmaceutical drugs for use as general anesthetics in that it was designed specifically to increase the antidepressant effects of ketamine 19e7d2ff85

== Recreational use == 19e7d2ff85 == Function == 19e7d2ff85 It acts as a potent full agonist for the serotonin 5-HT_{2A} receptor. 19e7d2ff85 The dose range of 25B-NBOMe has been given as 50 to 700 µg or more sublingually, with a typical dose estimate of 400 µg. Doses over 800 µg are said to be very strong. It may also be taken buccally or intranasally. The intranasal dose range has been give as 50 to 500 mg or more and is slightly lower than the sublingual dose range. 25-NB drugs like 25B-NBOMe are not orally active. 25B-NBOMe's onset sublingually is said to be 45 to 75 minutes or 15 to 120 minutes and to be longer than that of LSD. The drug's duration is 8 to 12 hours. 19e7d2ff85 Other uses are pre- and postoperative states with anxiety and insomnia, severe nausea / emesis (in hospitalized patients), the amelioration of anxiety and agitation due to use of selective serotonin reuptake inhibitors for depression and, off-label, the amelioration of alcohol and opioid withdrawal. It may also be used cautiously to treat nonpsychotic irritability, aggression, and insomnia in pediatric patients. 19e7d2ff85

25D-NBOMe or more sublingually, with a typical dose estimate of 1. It acts in a similar manner to related compounds such as 25I-NBOMe, which is a potent agonist at the 5-HT_{2A} receptor. 0 mg. NBOMe compounds are often associated with life-threatening toxicity and death. 25D-NBOMe has been sold as a street drug since 2010 and produces similar effects in humans to related compounds such as 25I-NBOMe and 25C-NBOMe. Studies on 25D-NBOMe, also known as NBOMe-2C-D and "divination", is a derivative of the phenethylamine derived hallucinogen 2C-D. It was banned as a Temporary Class Drug in the UK on 10 June 2013 after concerns about its recreational use 19e7d2ff85

MXE is an arylcyclohexylamine. It acts mainly as an NMDA receptor antagonist, similarly to other arylcyclohexylamines like ketamine and PCP. 19e7d2ff85 == Medical uses == 19e7d2ff85 == Japan == 19e7d2ff85 Even though the alpha and beta subunits of hexosaminidase A can both cleave GalNAc residues, only the alpha subunit is able to hydrolyze GM2 gangliosides. Plants of the genus Conium are eudicots, flowering plants distinguished by their two cotyledons (embryonic leaves) and tricolpate (three-pored) pollen. They are typically biennial, forming basal rosettes in the first year of growth, and sprouting a rigid, hollow flower stalk in the second. Germination occurs between spring and autumn. Occasionally, plants which germinate in early spring are annual instead of biennial. These plants grow best in wet, poorly drained areas with nutrient rich soil. They grow well in nitrogen rich soil, and are able to tolerate high levels of heavy metals, such as

arsenic, cadmium, and lead. Conium plants are diploid, with a chromosome number of $2n = 22$ (haploid number 11). They grow from one to three... 19e7d2ff85

19e7d2ff85 Hexosaminidase A and the cofactor GM2 activator protein catalyze the degradation of the GM2 gangliosides and other molecules containing terminal N-acetyl hexosamines. Hexosaminidase A is a heterodimer composed of an alpha subunit (this protein) and a beta subunit. The alpha subunit polypeptide is encoded by the HEXA gene while the beta subunit is encoded by the HEXB gene. Gene mutations in the gene encoding the beta subunit (HEXB) often result in Sandhoff disease; whereas, mutations in the gene encoding the alpha subunit (HEXA, this gene) decrease the hydrolysis of GM2 gangliosides, which is the main cause of Tay-Sachs disease. 19e7d2ff85

Methiopropamine functions as a norepinephrine-dopamine reuptake inhibitor (NDRI) that is approximately 1.85 times more selective for norepinephrine than dopamine. It is approximately one-third as potent as dextroamphetamine as a norepinephrine reuptake inhibitor and one-fifth as much as a dopamine reuptake inhibitor. It displays negligible activity as a serotonin reuptake inhibitor. 19e7d2ff85
