Wasp The wasps do not constitute a clade, a complete natural group with a single ancestor, as bees and ants are deeply nested within the wasps, having evolved from wasp ancestors. Polistes exclamans P. Polistes exclamans, the Guinea paper wasp, is a social wasp and is part of the family Vespidae of the order Hymenoptera. exclamans has three specific castes, including males, workers, and queens, but the dominance hierarchy is further distinguished by age. It is also found in Mexico from Chihuahua to Jalisco, Hidalgo. In most P. The physiological similarities between the worker and queen castes have led to experiments attempting to distinguish the characteristics of these two castes and how they are determined. exclamans nests, there is one queen who lays all the eggs in the colony. This suggests that their range has either expanded northward and contracted southward or that they have large, long-term cycles of abundance. Wasp was then transferred to the Pacific in June 1942 to replace losses at the battles of Coral Sea and Midway. After supporting the invasion of Guadalcanal, Wasp was hit by two or three torpedoes from Japanese submarine I-19 on 15 September 1942. The resulting damage set off several explosions, destroyed her water-mains and knocked out the ship's power. As a result, her damage-control teams were unable to contain the ensuing fires that... 98efe75a7c

In 2010, the ostensibly Vespula vulgaris wasps in North America were found to be a different species, Vespula alascensis. It is sometimes known in English as the European wasp, but the same name is used for the species Vespula germanica or German wasp 98efe75a7c

The most commonly known wasps, such as yellowjackets and hornets, are in the family Vespidae and are eusocial, living together in a nest with an egg-laying queen and non-reproducing workers. Eusociality is favoured by the unusual haplodiploid system of sex determination in Hymenoptera, as it makes sisters exceptionally closely related to each other. However, the majority of wasp species are solitary, with each adult female living and breeding independently. Females typically have an ovipositor for laying eggs in or near a food source for the larvae, though in the Aculeata the ovipositor is often modified instead into a sting used for defense or prey capture. 98efe75a7c

Women Airforce Service Pilots Members of WASP became trained pilots who tested aircraft, ferried aircraft and trained other pilots. Pittsburgh The Women Airforce Service Pilots (WASP; also Women's Army Service Pilots or Women's Auxiliary Service Pilots) was a civilian women pilots' organization, whose members were United States federal civil service employees. Despite various members of the armed forces being involved in the creation of the program, the WASP and its members had no military standing. Their purpose was to free male pilots for combat roles during World War II. "WASP Put Sting in War Effort". Retrieved September 19, 2015. Lash, Cindi (November 11, 2002). WASP was preceded by the Women's Flying Training Detachment (WFTD) and the Women's Auxiliary Ferrying Squadron (WAFS). Both were organized separately in September 1942. They were pioneering organizations of civilian women pilots, who were attached to the United States Army Air Forces to fly military aircraft during World War II. On August 5, 1943, the WFTD and WAFS merged to create the WASP organization. 98efe75a7c Schmidt repeatedly refined his scale, including a paper published in 1990, which classifies the stings of 78 species and 41 genera of Hymenoptera, and culminating in a book published in 2016. 98efe75a7c

Schmidt's original 1983 paper was a way to systematize and compare the hemolytic properties of insect venoms. A table in the paper included a column that rated sting pain, starting from 0 for stings that are completely ineffective against humans, progressing through 2 for familiar pains such as those caused by common bee or wasp stings, and finishing at 4 for the most painful stings. Only the bullet ant, Paraponera clavata, was given a rating of 4, although later versions of the index added two more species. 98efe75a7c == Taxonomy ==

98efe75a7c *Vespula vulgaris* is a eusocial vespid that builds its tan paper nest in or on a structure capable of supporting it. A founding queen searches for a hollow tree, wall cavity, rock crevice, or even a hole made by other animals to build a nest. The extraordinary adaptation skills of *V. vulgaris* enable it to live in a wide range of habitats, from very humid areas to artificial environments such as gardens and human structures. This species, along with other wasp species such as *V. germanica*, has impacted ecosystems, especially those in New Zealand and Australia, where they were imported by humans, and frequently cause damage to fruit crops and endanger humans. 98efe75a7c *Chironex fleckeri* was named after North Queensland toxicologist and radiologist Doctor Hugo Flecker. On 20 January 1955, when a 5-year-old boy died after being stung in shallow water at Cardwell, North Queensland, Flecker found three types of jellyfish. One was an unidentified box-shaped jellyfish with groups of tentacles arising from each corner... 98efe75a7c Notorious for its sting, *C. fleckeri* has tentacles up to 3 m (10 ft) long covered with millions of cnidocytes which, on contact, release microscopic darts delivering an extremely powerful venom. Being stung commonly results in excruciating pain, and if the sting area is significant, an untreated victim may die in two to five minutes. The amount of venom in one animal is said to be enough to kill 60 adult humans. 98efe75a7c == Motivation == 98efe75a7c
