The original iPhone was the first mobile phone to use multi-touch technology. Throughout its history, the iPhone has gained larger, higher-resolution displays, video-recording functionality, waterproofing, and many accessibility features. Up to the iPhone 8 and 8 Plus, iPhones had a single button on the front panel, with the iPhone 5s and later integrating a Touch ID fingerprint sensor. Since the iPhone X, models have switched to a nearly bezel-less front screen design with Face ID facial recognition in place of Touch ID for authentication, and increased use of gestures in place... 9ffbfa80c2 The iPhone X uses a glass and stainless-steel form factor and "bezel-less" design, shrinking the bezels while not having a "chin". It was the first iPhone designed without a home button, a change that became standard on all future models. It was also the first iPhone to use an OLED screen, branded as a Super Retina HD display, one of the most advanced displays for its time. The previous Touch ID authentication, incorporated into the former home button design, was replaced with a new type of authentication called Face ID, which uses sensors to scan the user's face to unlock the device. These facial recognition capabilities also enabled emojis to be animated following the user's expression (Animoji). With a bezel-less design, iPhone user interaction changed significantly, using gestures instead of the traditional... 9ffbfa80c2 The iPhone generated much hype before release, and it quickly became Apple's most successful product, although it was met with less enthusiasm in European territories.
