Components are often designed to generate as little heat as possible, and computers and operating systems may be designed to reduce power consumption and consequent heating according to workload, but more heat may still be produced than can be removed without attention to cooling. Use of heatsinks cooled by airflow reduces the temperature rise produced by a given amount of heat. Attention to patterns of airflow can prevent the development of hotspots. Computer fans are widely used along with heatsink fans to reduce temperature by actively exhausting hot air. There are also other cooling techniques, such as liquid cooling. dc6d102714 Techniques include heat (including boiling), filtration, activated charcoal adsorption, chemical disinfection (e.g. chlorination, iodine, ozonation, etc.), ultraviolet purification (including sodis), distillation (including solar distillation), and flocculation. Often these are used in combination. dc6d102714 These units provide an autonomous supply of drinking water to people without access to clean water supply services, including inhabitants of developing countries and disaster areas, military personnel, campers, hikers, and workers in wilderness, and survivalists. They are also called point-of-use water treatment systems and field water disinfection techniques. dc6d102714

Computer cooling Components that are susceptible to temporary malfunction or permanent failure if overheated include integrated circuits such as central processing units (CPUs), chipsets, graphics cards, hard disk drives, and solid state drives (SSDs). commonly used to manage temperatures in smartphones and tablets, where components are packed tightly together with little to no active cooling, and with Computer cooling is required to remove the waste heat produced by computer hardware to keep components within permissible operating temperature limits dc6d102714

The Adam was shown at the 2011 Consumer Electronics Show (CES) in Las Vegas where it received favorable initial reviews. dc6d102714 The Adam includes an Nvidia Tegra 250 processor with a 1 GHz Dual Core Cortex A9.
