Word Lens The words were displayed in the original context on the original background, and the translation was performed in real-time without a connection to the internet. The New York Times journalist David Pogue Word Lens was an augmented reality translation application from Quest Visual. Word Lens used the built-in cameras on smartphones and similar devices to quickly scan and identify foreign text (such as that found in a sign or a menu), and then translated and displayed the words in another language on the device's display. Clarke's third law describing Word Lens: "Any sufficiently advanced technology is indistinguishable from magic". For example, using the viewfinder of a camera to show a shop sign on a smartphone's display would result in a real-time image of the shop sign being displayed, but the words shown on the sign would be the translated words instead of the original foreign words 4cacb1a937
