The brand name "Nicorette" comes from "nicotine" and Swedish: rette, "right way". == Medical uses ==

Chewing Carnivores generally chew very little or swallow Chewing or mastication is the process by which food is crushed and ground by the teeth. Chewing is largely an adaptation for mammalian herbivory to help break down food faster. humans and mice. It is the first step in the process of digestion, allowing a greater surface area for digestive enzymes and bile to break down the foods

Eddie Tolan Tolan found that he was chewing in sync with his stride. Tolan later began chewing gum as part of his routine, chewing the gum faster when he needed to accelerate

The brand is owned by Kenvue outside of the US, and Haleon in the US. During the mastication process, the food is positioned by the cheek and tongue between the teeth for grinding. The muscles of mastication move the jaws to bring the teeth into intermittent contact, repeatedly opening and closing. As chewing continues, and the digestive enzymes in saliva (especially amylase and lingual lipase) begin to break down carbohydrates and other nutrients, the food is made softer and warmer, forming a food bolus ready to be swallowed. It enters the esophagus and via peristalsis continues on to the stomach, where the next step of digestion occurs. Increasing the number of chews per bite stimulates the production of digestive enzymes and peptides and has been shown to increase diet-induced thermogenesis (DIT) by activating the sympathetic nervous system. Studies suggest that thorough chewing may facilitate digestion and nutrient absorption, improve cephalic insulin release and glucose excursions, and decrease food intake and levels of self... The product range encompasses chewing gum, lozenges, patches of two kinds (transparent and non-transparent), oral spray (Nicorette QuickMist), inhalator, sublingual tablets (Nicorette Microtab) and nasal spray.
