

Diversity In The Living World

Living Planet Index The Zoological Society of London (ZSL) manages the index in cooperation with the World Wide Fund for Nature (WWF). The Living Planet Index (LPI) is an indicator of the state of global biodiversity, based on trends in vertebrate populations of species from around the world. It is considered one of the most widely recognized global indicators for tracking changes in biodiversity over time 5623595882

According to the 2024 report, monitored wildlife populations showed a 73% average decline in size between 1970 and 2020, compared with a 69% average decline over 1970-2018 reported in the 2022 edition, suggesting that natural ecosystems are degrading at a rate unprecedented in human history Many trends are consistent with broader global assessments that identify biodiversity loss as one of the most significant environmental challenges currently affecting ecosystems... 5623595882

Ecosystem diversity and the environment. Ecosystem diversity addresses the combined characteristics of biotic properties which are living organisms (biodiversity) and abiotic Ecosystem diversity deals with the variations in ecosystems within a geographical location and its overall impact on human existence and the environment 5623595882

The Living Planet: Music from the BBC TV Series 5623595882 Diversity refers to the presence of variety within the organizational workforce in characteristics, such as race, gender, ethnicity, sexual orientation, disability, age, politics, culture, class, veteran status, or religion. Equity refers to concepts of fairness and justice, such as fair compensation and substantive equality. More specifically, equity usually also includes a focus on societal disparities, allocating resources, "decision making authority to groups that have historically been disadvantaged", and taking "into consideration a person's unique circumstances, adjusting treatment accordingly so that the end result is equal". Inclusion refers to... 5623595882 The organisation was founded as the Resource Network for Linguistic Diversity (RNLD) in 2004 by linguists Margaret Florey and Nicholas Thieberger as a resource organisation aiming to support linguistic diversity by offering a range of training programs, facilitating networking between language maintenance practitioners, and

maintaining a website with various practical resources. Living Languages is incorporated in Victoria, Australia, and is registered as a tax-exempt organisation. Funded activities by Living Languages are primarily supported by the Indigenous Languages Support (ILS) grant scheme from the Government of Australia. In September 2019, it renamed to 'Living Languages', with the stated goal of better reflecting the organisation's mission. 5623595882 In the word floristic, "flora" means "flower" in Latin. Floristic is used to describe something relating plants or flowers, not to be confused with the word: Floristics. 5623595882 The Cartagena Protocol is an international treaty governing the movements of living modified organisms (LMOs) resulting from modern biotechnology from one country to another. It was adopted on 29 January 2000 as a supplementary agreement to the CBD and entered into force on 11 September 2003. 5623595882 == International human rights == 5623595882 == History == 5623595882 Living Planet Index, an indicator of biological diversity by the World Wide Fund for Nature and the Zoological Society of London 5623595882 Explaining the latitudinal diversity gradient has been called one of the great contemporary challenges of biogeography and macroecology (Willig et al. 2003, Pimm and Brown 2004, Cardillo et al. 2005). The question "What determines patterns of species diversity?" was among the 25 key research themes for the future identified in 125th Anniversary issue of Science (July 2005). There is a lack of consensus among ecologists about the mechanisms underlying the pattern, and many hypotheses have been proposed and debated. A recent review noted that among the many conundrums associated with the latitudinal diversity gradient (or latitudinal biodiversity gradient) the causal relationship between rates of molecular evolution and speciation has yet... 5623595882 Living Planet Programme, a programme within the European Space Agency, renamed to FutureEO 5623595882 Cultural diversity can be affected by political factors such as censorship or the protection of the rights of artists, and by economic factors such as free trade or protectionism in the market for cultural goods. Since the middle of the 20th century, there has been a concerted international effort to protect cultural diversity, involving the United Nations Educational, Scientific and Cultural Organization (UNESCO) and its member states. This involves action at international, national, and local levels. Cultural diversity can also be promoted by individual citizens in the ways they choose to express or experience culture. 5623595882

Living Planet biological diversity by the World Wide Fund for Nature and the Zoological Society of London Living Planet Report, a report published by the World Wide Fund Living Planet may refer to: 5623595882

Cultural diversity It has a variety of meanings in different contexts,

sometimes applying to cultural products like art works in museums or entertainment available online, and sometimes applying to the variety of human cultures or traditions in a specific region, or in the world as a whole. It can also refer to the inclusion of different cultural perspectives in an organization or society. in the world as a whole. Cultural diversity can be Cultural diversity is the quality of diverse or different cultures, as opposed to monoculture. It can also refer to the inclusion of different cultural perspectives in an organization or society 5623595882

== Impact == 5623595882 Ecosystem diversity addresses the combined characteristics of biotic properties which are living organisms (biodiversity) and abiotic properties such as nonliving things like water or soil (geodiversity). It is a variation in the ecosystems found in a region or the variation in ecosystems over the whole planet. Ecological diversity includes the variation in both terrestrial and aquatic ecosystems. Ecological diversity can also take into account the variation in the complexity of a biological community, including the number of different niches, the number of and other ecological processes. An example of ecological diversity on a global scale would be the variation in ecosystems, such as deserts, forests, grasslands, wetlands and oceans. Ecological diversity is the largest scale of biodiversity, and within each ecosystem, there is a great deal of both species and genetic diversity. 5623595882

Floristic diversity plant species in a specific area there are. Floristic diversity allows different regions to analyze the environment and the evolution of the area. Floristic diversity covers how many varieties of plant species in a specific area there are. Elements that alter floristic diversity include climate, weather, soil, and animals. There are multiple factors that contribute to floristic diversity, including both biotic (living) and abiotic Floristic diversity is variety in the genome of flowering plants, as well as variety at the species and ecosystem level. There are multiple factors that contribute to floristic diversity, including both biotic (living) and abiotic (not living) elements 5623595882

In the word diversity, the Latin root "diversus" means "various." Diversity is used to describe variety or a range of differences. 5623595882 Living Planet Report, a report published by the World Wide Fund for Nature 5623595882 The Nagoya Protocol is another supplementary agreement to the CBD. It provides... 5623595882 Diversity in the ecosystem is significant to human existence for a variety of reasons. Ecosystem diversity boosts the availability of oxygen... 5623595882 The index was first conceived in 1997 where its primary goal was developing a way to measure changes in the Earth's biodiversity overtime. As of 2022, the

index is statistically created from journal studies, online databases and government reports for 31,821 populations of 5,230 species of mammal, bird, reptile, amphibian and fish. 5623595882

Diversity, equity, and inclusion These three notions (diversity, equity, and inclusion) together represent "three closely linked values", which organizations seek to institutionalize through DEI frameworks. Diversity, equity, and inclusion (DEI, also known in the United Kingdom as equality, diversity, and inclusion (EDI)) are organizational frameworks that Diversity, equity, and inclusion (DEI, also known in the United Kingdom as equality, diversity, and inclusion (EDI)) are organizational frameworks that seek to promote the fair treatment and full participation of all people, particularly groups who have historically been underrepresented, marginalized, or subject to discrimination based on identity or disability 5623595882

The Living Planet, 1984 BBC nature documentary series 5623595882 == Etymology == 5623595882 When measuring human diversity, a diversity index exemplifies the likelihood that two randomly selected residents have different ethnicities. If all residents are of the same ethnic group it is zero by definition. If half are from one group and half from another, it is 50. The diversity index does not take into account the willingness of individuals to cooperate with those of other ethnicities. 5623595882

Latitudinal gradients in species diversity A Species richness, or biodiversity, increases from the poles to the tropics for a wide variety of terrestrial and marine organisms, often referred to as the latitudinal diversity gradient. It has been observed to varying degrees in Earth's past. The latitudinal diversity gradient is one of the most widely recognized patterns in ecology. It has been observed to varying degrees in Earth's past. A parallel trend has been found with elevation (elevational diversity gradient), though this is less well-studied. The latitudinal diversity gradient is one of the most widely recognized patterns in ecology 5623595882

== Characteristics == 5623595882 The genome of plants can be different based on size, number of chromosomes, and order of genes. Analyzing genomes in plants helps scientists to determine differences and similarities within plant species. 5623595882

Diversity (politics) Diversity within groups is a key concept in sociology and political science that refers to the degree of difference along socially significant identifying Diversity within groups is a key concept in sociology and political science that refers to the degree of difference along socially

significant identifying features among the members of a purposefully defined group, such as any group differences in racial or ethnic classifications, age, gender, religion, philosophy, politics, culture, language, physical abilities, socioeconomic background, sexual orientation, gender identity, intelligence, physical health, mental health, genetic attributes, personality, behavior, or attractiveness 5623595882

The Convention was opened for signature at the Earth Summit in Rio de Janeiro on 5 June 1992 and entered into force on 29 December 1993. The United States is the only UN member state which has not ratified the Convention. It has two supplementary agreements, the Cartagena Protocol and Nagoya Protocol. 5623595882

Convention on Biological Diversity The Convention on Biological Diversity (CBD), known informally as the Biodiversity Convention, is a multilateral treaty. The Convention has three main The Convention on Biological Diversity (CBD), known informally as the Biodiversity Convention, is a multilateral treaty. The Convention has three main goals: the conservation of biological diversity (or biodiversity); the sustainable use of its components; and the fair and equitable sharing of benefits arising from genetic resources. Its objective is to develop national strategies for the conservation and sustainable use of biological diversity, and it is often seen as the key document regarding sustainable development 5623595882
