Ethylene oxide Ethylene oxide is industrially produced by oxidation of ethylene in the presence of a silver catalyst. alkoxides, reactions of ethylene oxide with compounds containing active methylene group leads to the formation of butyrolactones: Ethylene oxide enters Ethylene oxide is an organic compound with the formula C₂H₄O. Ethylene oxide is a colorless and flammable gas with a faintly sweet odor. Because it is a strained ring, ethylene oxide easily participates in a number of addition reactions that result in ring-opening. Ethylene oxide is isomeric with acetaldehyde and with vinyl alcohol. It is a cyclic ether and the simplest epoxide: a three-membered ring consisting of one oxygen atom and two carbon atoms e4c32da6bf

5.56×45mm NATO Talk:10/90 gap 1,4-Dioxane (S)-Equol 11 β -Methyl-19-nortestosterone Talk:(S)-Equol 6 The reactivity that is responsible for many of ethylene oxide's hazards also makes it useful. Although too dangerous for direct household use and generally unfamiliar to consumers, ethylene oxide is used for making many consumer products as well as non-consumer chemicals and intermediates. These products include detergents, thickeners, solvents, plastics, and various organic chemicals such as ethylene glycol, ethanolamines, simple and complex glycols, polyglycol ethers, and other compounds. Although it is a vital raw material with diverse applications, including the manufacture of products like polysorbate 20 and polyethylene glycol...
