Gastrointestinal tract Gastrointestinal is an adjective meaning of or pertaining to the stomach and intestines. being digested, as food composition from the same meal may leave the stomach at different rates. Food taken in through the mouth is digested to extract nutrients and absorb energy, and the waste expelled at the anus as feces. The tract is one of the largest of the body's systems. Total emptying of the stomach takes around 4-5 hours, The gastrointestinal tract (also called the GI tract, digestive tract, and the alimentary canal) is the tract or passageway of the digestive system that leads from the mouth to the anus. The GI tract contains all the major organs of the digestive system, in humans and other animals, including the esophagus, stomach, and intestines b88a8ee3aa

Horses are non-ruminant herbivores of a type known as a "hindgut fermenter." Horses have only one stomach, as do humans. However, unlike humans, they also need to digest plant fiber (largely cellulose) that comes from grass or hay. Ruminants like cattle are foregut fermenters, and digest fiber in plant matter by use of a multi-chambered stomach, whereas horses use microbial fermentation in the hindgut to break down the cellulose. b88a8ee3aa

In most nations, some or all employers are required to pay their employees for some time away from work when they are ill. Most European, many Latin American, a few African, and a few Asian countries have legal requirements for paid sick leave for employees. In nations without laws mandating paid sick leave, some employers offer it voluntarily or as the result of a collective bargaining agreement. However, in countries with poorer labor laws such as South Korea, employees are usually forced to use paid vacation... b88a8ee3aa In practical terms, horses prefer to eat small amounts of food steadily throughout the day, as they do in nature when grazing on pasture lands. Although this is not always possible with modern stabling practices and human schedules that favor feeding horses twice a day, it is important to remember the underlying biology of the animal when determining what to feed, how often, and in what quantities. b88a8ee3aa
