Retrieved Amos Grunebaum (Hebrew: אָמוֹס גְּרֻנְבֹּאָם; born January 27, 1950) is an American obstetrician and gynecologist. Grunebaum of BabyMed. "Paging Dr. com. He serves as Professor of Obstetrics and Gynecology at the Zucker School of Medicine, as Professor Emeritus at the medical school Weill Cornell Medicine, and as a specialist in maternal-fetal medicine and high-risk pregnancies. 2018. Com: How, When & Why You Should be Having Sex to Get Pregnant %%Rosie Pope Maternity". rosiepope. He is also the founder of Babymed 56a046113a

Symptoms-based methods involve tracking one or more of the three primary fertility signs: basal body temperature, cervical mucus, and cervical position. Systems relying exclusively... 56a046113a Methods of identifying infertile days have been known since antiquity, but scientific knowledge gained during the past century has increased the number, variety, and especially accuracy of methods. 56a046113a Some people choose to track ovulation in order to improve or aid becoming pregnant by timing intercourse with their ovulation. The signs of ovulation may include cervical mucus changes, mild cramping in the abdominal area, and a small rise in basal body temperature. Medication is also sometimes required by those experiencing infertility to induce ovulation. 56a046113a His post-doctoral positions include a residency in pathology at City Hospital Leverkusen in Germany, and residencies in anesthesia at Weyertal Hospital, Cologne in Germany and Maimonides Medical Center, Brooklyn, New York. He then had a residency in obstetrics and gynecology at SUNY Downstate Medical Center, Brooklyn, and finally a Fellowship in maternal-fetal medicine in the same SUNY facility. 56a046113a He was born in Haifa, Israel, and raised in Germany. He received his M.D. in 1975 from the University of Cologne Medical School. 56a046113a == Early life == 56a046113a

Insemination Prior to ovulation, the cervical mucus becomes thinner and more hospitable to sperm. Sperm Insemination is the introduction of sperm (in semen) into a female's reproductive system in order to fertilize the ovum through sexual reproduction.

Female humans and other mammals are inseminated during sexual intercourse or copulation, but can also be inseminated by artificial insemination. The sperm enters into the uterus of a mammal or the oviduct of an oviparous (egg-laying) animal. acidic environment of the vagina or drip out with the semen 56a046113a

Kindara was founded in 2011 by husband-and-wife team Will Sacks and Kati Bicknell. The company launched its free mobile application in 2012. Kindara's mobile application allows women to track signs of fertility, such as basal body temperature, cervical fluid, and the position of the cervix to determine when ovulation is occurring. Kindara also sells a thermometer, Wink, which records basal body temperature and syncs automatically to the Kindara fertility application. 56a046113a In humans, infertility is defined as the inability to become pregnant after at least one year of unprotected and regular sexual intercourse involving a male and female partner. There are many causes of infertility, including some that medical intervention can treat. Estimates from 1997, suggest that worldwide about five percent of all heterosexual couples have an unresolved problem with infertility. That figure has been on the rise, with the World Health Organization (WHO) reporting in 2023 that about 17.5% of people experience infertility during their lifetime, while prevalence at a given time point is 12.6%. Many more couples, however, experience involuntary childlessness for at least one year, with estimates ranging from 12% to 28%. 56a046113a Systems of fertility awareness rely on observation of changes in one or more of the primary fertility signs (basal body temperature, cervical mucus, and cervical position), tracking menstrual cycle length and identifying the fertile window based on this information, or both. Other signs may also be observed: these include breast tenderness and mittelschmerz (ovulation pains), urine analysis strips known as ovulation predictor kits (OPKs), and microscopic examination of saliva or cervical fluid. Also available are computerized fertility monitors. 56a046113a == Overview == 56a046113a

Kindara trying to get pregnant, or women who want to track their menstrual cycle for overall health. Their latest product, Priya Fertility and Ovulation Monitor Kindara is a femtech company headquartered in Colorado that develops apps that help women identify their fertile window. The products are used for women trying to get pregnant, or women who want to track their menstrual cycle for overall health. Their latest product, Priya Fertility and Ovulation Monitor, maximizes a woman's chance of getting pregnancy by identifying her most fertile days 56a046113a

Clearblue In 2013, the company also began offering an ovulation test with a dual hormone read, detecting Clearblue is a brand of Swiss Precision Diagnostics that offers consumer home diagnostic products such as pregnancy tests, ovulation tests and fertility monitors. The company created the first digital ovulation test in 2004 56a046113a

In humans, the act and form of insemination has legal, moral and interpersonal implications. However, whether insemination

takes place naturally or by artificial means, the pregnancy and the progress of it will be the same. Insemination may be called in vivo fertilisation (from in vivo meaning "within the living") because an egg is fertilized inside the body, this is in contrast with in vitro fertilisation (IVF). 56a046113a

Fertility awareness include breast tenderness and mittelschmerz (ovulation pains), urine analysis strips known as ovulation predictor kits (OPKs), and microscopic examination Fertility awareness (FA) refers to a set of practices used to determine the fertile and infertile phases of a woman's menstrual cycle. Fertility awareness methods may be used to avoid pregnancy, to achieve pregnancy, or as a way to monitor gynecological health 56a046113a

Male infertility is responsible for 20–30% of infertility cases, while 20–35% are due to female... 56a046113a

Pregnancy from rape It has been studied in the context of war, particularly as a tool for genocide, as well as in other unrelated contexts, such as rape by a stranger, statutory rape, incest, and underage pregnancy. could produce reflex ovulation". The scientific consensus is that rape is at least as likely to lead to pregnancy as consensual sexual intercourse, with some studies suggesting rape may actually result in higher rates of pregnancy than consensual intercourse. Pregnancy is a potential result of rape. Smith also cites veterinary scientist Wolfgang Jöchle, who "proposed that rape may induce ovulation in human females" 56a046113a

Reproductive coercion and intimate partner violence are strongly correlated; however, reproductive coercion can occur in relationships in which physical and sexual violence are not reported. Reproductive coercion and unintended pregnancy are strongly associated, and this association is stronger in individuals who have experienced intimate partner violence. While research remains fragmentary, women in abusive relationships are at higher risk of reproductive coercion and unintended pregnancies. 56a046113a In plants, the fertilization process is referred to as pollination. It is the process of transfer of pollen grains from one anther to the stigma of other plants. 56a046113a == Process == 56a046113a Reproductive coercion can include pregnancy coercion, birth control sabotage, and controlling the outcome of a pregnancy. 56a046113a

Reproductive coercion These behaviors are often perpetrated by a current, former, or hopeful intimate or romantic partner, but they can also be perpetrated by parents or in-laws, or by policies of institutions or government. get them pregnant when they did not want to, or refused to use a condom, with 4. 8% having had an intimate partner who tried to get them pregnant when Reproductive coercion, also called coerced reproduction, reproductive control or reproductive abuse, is a collection of behaviors that interfere with decision-making related to reproductive health 56a046113a

After ovulation, during the luteal phase, the egg will be available to be fertilized by sperm. If it is not, it will break down in less than a day. Meanwhile, the uterine lining (endometrium) continues to thicken to be able to receive a fertilized egg. If no conception occurs, the uterine lining will eventually break down and be shed from the body via the vagina during menstruation. 56a046113a In 2018, Kindara was acquired by the company Prima-Temp. 56a046113a Rape can cause difficulties during and after pregnancy, with potential negative consequences for both the victim and a resulting child. Medical treatment following a rape includes testing for, preventing, and managing pregnancy. A woman who becomes pregnant after a rape may face a decision about whether to have an abortion, to raise the child, or to make an adoption plan. In some countries where abortion is illegal after rape and incest, over 90% of pregnancies in girls age 15 and under are due to rape by family members. 56a046113a Reproductive coercion is considered a serious public health issue. Negative... 56a046113a Coercive behaviors infringe on individuals' reproductive rights and reduce their reproductive autonomy. 56a046113a == Types == 56a046113a

Ovulation Ovulation is stimulated by an increase in luteinizing hormone (LH). The signs of ovulation may include cervical mucus changes. Ovulation is an important part of the menstrual cycle in female vertebrates where the egg cells are released from the ovaries as part of the ovarian cycle. choose to track ovulation in order to improve or aid becoming pregnant by timing intercourse with their ovulation. In female humans ovulation typically occurs near the midpoint in the menstrual cycle and after the follicular phase. The ovarian follicles rupture and release the secondary oocyte ovarian cells 56a046113a

Pregnancy test Almost all pregnant women will have a positive urine pregnancy test one week after the first day of a missed menstrual period. The two primary methods are testing for the pregnancy hormone (human chorionic gonadotropin (hCG)) in blood or urine using a pregnancy test kit, and scanning with ultrasonography. Secretion of hCG can occur as soon as 6 days following ovulation and on average 8-10 days following ovulation; this is the earliest hCG can be detected in A pregnancy test is used to determine whether a woman is pregnant or not. Testing blood for hCG results in the earliest detection of pregnancy 56a046113a

== Terminology == 56a046113a

Infertility As a medical term, infertility does not apply before and after the normal period of natural, age-dependent reproductive function: in children before puberty, or in women after menopause. impregnate a female; girls have not begun the process of ovulation which activates the fertility of their egg cells (ovulation is confirmed by the first menstrual In biology, infertility is the inability of a male and female organism to reproduce. It is usually not the natural state of a healthy organism that has reached sexual maturity 56a046113a
