Aspirin-exacerbated respiratory disease by three simultaneous symptoms: asthma, chronic rhinosinusitis with nasal polyps, and intolerance of aspirin and other nonsteroidal anti-inflammatory Aspirin-exacerbated respiratory disease (AERD), also called NSAID-exacerbated respiratory disease (N-ERD) or historically aspirin-induced asthma and Samter's triad, is a long-term disease defined by three simultaneous symptoms: asthma, chronic rhinosinusitis with nasal polyps, and intolerance of aspirin and other nonsteroidal anti-inflammatory drugs (NSAIDs). AERD most commonly begins in early- to mid-adulthood and has no known cure. Reduction or loss of the ability to smell is extremely common, occurring in more than 90% of people with the disease. While NSAID intolerance is a defining feature of AERD, avoidance of NSAIDs does not affect the onset, development or perennial nature of the disease. Compared to aspirin tolerant patients, AERD patients' asthma and nasal polyps are generally more severe 91068f9127

Sinusitis is a condition that affects both children and adults. It is caused by a combination of environmental and health factors. It can occur in individuals with allergies, exposure to environmental irritants, structural abnormalities of the nasal cavity and sinuses and poor immune function. Most cases are caused by a viral infection. Recurrent episodes are more likely in people with asthma, cystic fibrosis, and immunodeficiency. 91068f9127 Roman medical practices, including surgery, were borrowed from the Greeks, with many Roman surgeons coming from Greece. In the 2nd century CE, Galen, a Greek physician advanced Roman surgical knowledge by combining Greek and Roman medical knowledge. 91068f9127

== Signs and symptoms == 91068f9127 The act of performing surgery may be called a surgical procedure or surgical operation, or simply "surgery" or "operation". In this context, the verb "operate" means to perform surgery. The adjective surgical means pertaining to surgery; e.g. surgical instruments, surgical facility or surgical nurse. Most surgical procedures are performed by a pair of operators: a surgeon who is the main operator performing the surgery, and a surgical assistant who provides in-procedure manual assistance during surgery. Modern surgical operations typically require a surgical team that typically consists of the surgeon, the surgical assistant, an anaesthetist (often also complemented by an anaesthetic nurse), a scrub nurse (who handles sterile equipment), a circulating nurse and a surgical technologist, while... 91068f9127
