sometimes confused with the Lady Baltimore cake, which also is a liquor-laden fruit-filled cake. While the Lane cake originated in Alabama, the Lady Baltimore came from Charleston. Sisters Florrie and Nina Ottolengui, managers of the Women's Exchange Tea tearoom are credited with developing it. Lane cake is often found in the South at receptions, holiday dinners, or wedding showers. Greedy algorithm In this sense, a greedy algorithm is a special case of a dynamic programming algorithm. In many cases, a greedy algorithm does not produce an exact solution, but can yield solutions that approximate an exact solution in a reasonable amount of time. Uriel Feige notes that: [Greedy algorithms] may be viewed as the ultimate form of dynamic programming, in which only one partial solution is maintained. Bang-Jensen, Jørgen; A greedy algorithm is an algorithm which, at each step, makes the choice that is locally optimal, and subsequently does not reconsider past choices. Domination

The problem needs to have much more structure for this approach to work. 117 (1-3): 81-86. If an optimization problem only depends on the partial solution of solving it for one subproblem, we can solve this problem by "greedily" considering only the locally optimal subproblem. == Dining == c431d11fe5 With the invention of the Gaggia machine, espresso and espresso with milk, such as cappuccino and latte, spread in popularity from Italy and Greece in the 1950s. It then came to America, and with the rise in popularity of the Italian coffee culture in the 1980s, it began to spread worldwide via coffeehouses and coffeehouse chains. c431d11fe5 Before about 1700, it was customary for Europeans to bring their own spoons to the table. Spoons were carried as personal property in much the same way as people today carry wallets,

While liquid chromatography separates mixtures with multiple components, mass spectrometry provides spectral information that may help to identify (or confirm the suspected identity of) each separated component. Therefore, LC-MS may be applied in

The International Bartenders Association recipe is based on vodka citron, a lemon-flavored vodka. The use of citrus-flavored vodka as the basis for this cocktail appears to have been widely popularized in the mid-1990s by cocktail expert Dale DeGroff and is used in the IBA-approved recipe. Many bartenders, however, continue to use a standard unflavored vodka — this alternative would undoubtedly be historically consistent with any of the supposed predecessors of this drink that were popular in Ohio, Provincetown, or Minneapolis during the 1970s, or in San Francisco during the 1980s. A lemon twist is sometimes used to garnish.

Several systems of units of measurement define a tablespoon. The most common definition used in the UK, and US is exactly 15 mL. An Australian metric tablespoon is 20 mL. Historically, a United States customary liquid tablespoon was approximately 14.8 mL, or 1/2 US fluid ounce; A British tablespoon was approximately 14.2 mL, exactly 1/2 imperial fluid ounce.

== Cutlery == c431d11fe5 For most of history, most cookbooks did not specify quantities precisely, instead talking of "a nice leg of spring lamb", a "cupful" of lentils, a piece of butter "the size of a small apricot", and "sufficient" salt. Informal measurements

such as a "pinch", a "drop", or a "hint" (soupçon) continue to be used from time to time. In the US, Fannie Farmer introduced the more exact specification of quantities by volume in her 1896 Boston Cooking-School Cook Book. c431d11fe5 The product is packaged in a glass bottle with a distinctive round wooden cap. The capacity of the utensil, as opposed to the measurement, is defined by neither law nor custom but only by preferences, and may or may not significantly approximate the measurement. Dry bulk ingredients, such as sugar and flour, are measured by weight in most of the world ("250 g flour"), and by volume in North America ("1/2 cup flour"). Small quantities of salt and spices are generally measured by volume worldwide, as few households have sufficiently precise balances to measure by weight.
